GALLOWAYS'

ELECTRIC DRIVEN CREAM SEPARATOR

The New Masterpiece Electric Model comes with motor attachments built in and Westinghouse 1/4 H. P. Motor for use with either 32-volt farm light plant or 110-volt power line, already to plug in and turn on the switch. The motor furnishes ample power for any of the four sizes and runs the separator smoothly, steadily, quietly and at the correct speed.

The New Masterpiece Electric Model is a wonderful outfit—saves time, labor, cream—and last but not least, the complete Electric Equipped Galloway Masterpiece costs you less than other makes in the hand turning style. See page 22 for full description and prices.

WORLD'S \$34⁹⁰
Greatest
1/4 H.P.

FARM ENGINE

Here's another wonderful new Galloway product—the handiest and dandiest little farm and home engine you ever saw, sturdily and accurately built. Has new type rotary governor, water cooled, self-oiling and starts easily in any kind of weather. Just the thing for a woman to operate—runs all day without any attention and about 24 hours on a gallon of gasoline. Specially designed for running a cream separator, or washing machine—but will do a hundred little jobs in a satisfactory manner. Will save its full cost every six months. See page 28 for full description and prices.

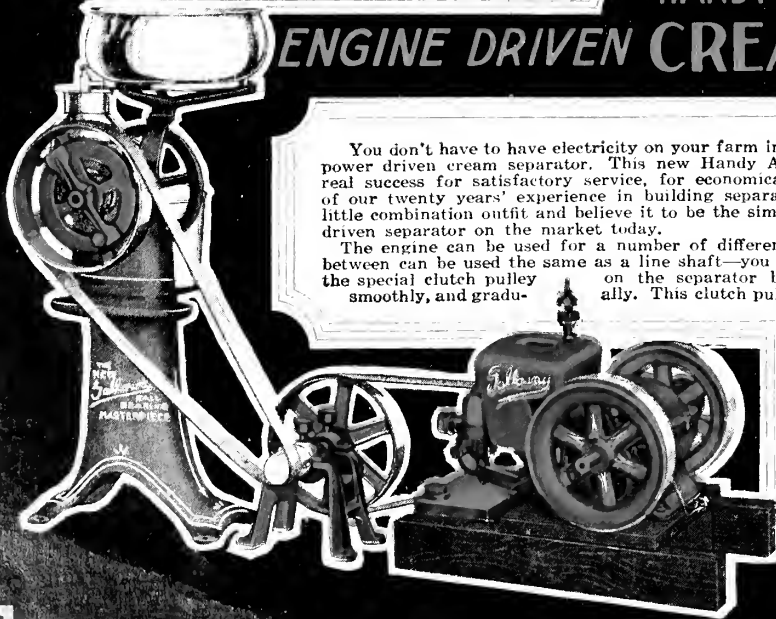

HANDY ANDY

ENGINE DRIVEN CREAM SEPARATOR

You don't have to have electricity on your farm in order to have a safe, sure, satisfactory power driven cream separator. This new Handy Andy Engine Power Separator Outfit is a real success for satisfactory service, for economical operation and for low first cost. Out of our twenty years' experience in building separators and engines, we have produced this little combination outfit and believe it to be the simplest, nicest working, lowest priced power driven separator on the market today.

The engine can be used for a number of different jobs—power stand which acts as a go-between can be used the same as a line shaft—you can bolt to the ceiling, floor or wall—and on the separator brings the separator up to proper speed ally. This clutch pulley fits on the end of the main drive shaft and can be removed by merely loosening a set screw so that the hand crank can be put on and the separator turned by hand any time you wish. The necessary amount of rubber belting is furnished free with this combination outfit. It is guaranteed to please you in every way or your money will be refunded. For complete description and prices on the different selling plans see page 22.

General Information

HOW TO ORDER

Fill out order blank giving catalog number, name of article, size, color and payment plan and price. Send your remittance by personal check, post office money order or bank draft. On amounts less than \$1.00 you can send postage stamps.

ORDER BLANKS

You will find two order blanks in the back of this catalog. If you run out of order blanks we will send you more upon request, or you can just write an ordinary letter telling us what article you want.

PARCEL POST

Be sure to send enough postage for articles you want sent by parcel post. If you send too much we will refund. You will find parcel post map and table of rates on back of order blank.

FREIGHT—EXPRESS

We always ship by the cheapest way, which is freight, on all heavy items. We will send by express if requested. Do not send money for shipping charges on freight or express orders unless there is no agent at your shipping point.

SHIPPING POINTS

We have various shipping points on cream separators, manure spreaders and gasoline engines. Prices on these three are F.O.B. Waterloo, Council Bluffs, Kansas City, Chicago and St. Paul, whichever is nearest to you. If it should be necessary for us to make shipment from Waterloo, we will adjust the freight difference with you on basis of these shipping points.

RUSH ORDERS

If you are in a big rush, have your banker wire us that he is sending the money on your order, tell us what you want, to whom and where to send it and we will rush the shipment without waiting for the order to come in.

RETURNING GOODS

If anything is broken upon arrival, be sure to have station agent make notation on freight bill. Before you return any goods for any reason, write us for shipping instructions. This will insure you getting your refund promptly.

25 YEARS SELLING DIRECT

SILVER
ANNIVERSARY

FROM FACTORY TO FARM

Our 25th Anniversary

The Pioneer Mail Order Farm Implement House of the Country is celebrating its Silver Anniversary—

25 years of direct selling at factory prices!

25 years of saving silver dollars for farmers in every community of this country!

Back in 1904—

That's when this business was founded by men who grew to manhood on Iowa farms and knew what farmers needed most.

Back in 1904—

The idea of cutting out the middlemen and selling exclusively by mail direct-from-factory-to-farm was new then. Everybody said it wouldn't work.

BUT IT DID WORK—and it is still working!

It has worked so well that others have copied our methods.

Right from the start farmers liked Galloway Separators, Engines, Spreaders and other farm equipment. From the first, my orders and satisfied customers proved that the plan of building a quality farm implement and selling it at a low one-profit price direct to the user was right.

Farmers knew when they were saving money—THEY LIKED TO DEAL DIRECT WITH THE MANUFACTURER AND GET FACTORY PRICES. Orders have never stopped coming. Now Galloway customers are found in every county of our 48 states and in many foreign countries.

Galloway Factories have never stopped producing. They have never been closed down a single week since they started back there in 1904 (except a short time during a general strike in all the Waterloo factories). Orders from satisfied customers have kept the Galloway Factories going and growing even when others had to close down. I owe much to these satisfied customers. They are my biggest asset and best advertisement.

WE ALL CELEBRATE IN 1929!

Just read the few letters I had room to print on this page—letters from customers who have been Galloway boosters for years—some of them almost from the very start of this business.

The grown sons and daughters of my first customers have now been added to the big Galloway family. I am proud of this record. It shows that farmers know what the Galloway policy of direct selling means in dollars saved and in satisfaction.

But—the million dollars saved by Galloway customer friends doesn't count at all!

Remember, *Galloways' low prices save all farmers money* whether they buy from my catalog or not. Galloway competition has forced dealers and others selling to farmers to cut down on profits—to lower their prices—in order to try to meet my factory price in the Galloway catalog.

But—the farmer who has made the biggest saving is the one who has ordered the most from Galloways during the 25 years of my direct selling.

BUT NOW—IN 1929—

I am going to celebrate this 25 years of successful growth. The pioneer mail order farm implement house has become the biggest exclusively mail order implement house in the world. I invite you all to help celebrate this event on our Silver Anniversary.

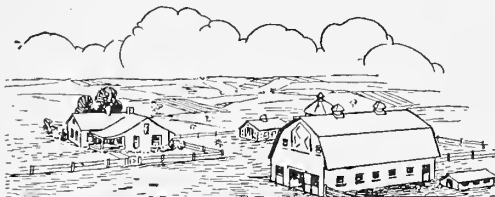

MY PART—Offering a bigger line of better merchandise, giving you better and bigger bargains, cutting prices down to bedrock and treating your orders and your business as friend would treat friend.

YOUR PART—Sharing these big savings on as much Galloway merchandise as you need and can use; receiving the benefit of my trial offer, my easy payment terms and this most friendly treatment.

1929 is going to be a great year for The Galloway Company. Will you let me help you make it a big year for you, also?

B. E. Butler

President

Letters From Friends of Many Years

"In 1905 I bought a Galloway Manure Spreader. I still have it and it does a good job of spreading every spring." — W. W. Cornelius, Blue Springs, Mississippi.

"I have had a 7-H.P. Galloway engine for many years and it is still in good shape. I am also using a Galloway Cream Separator, wood saw and pump jack. The separator is over 10 years old now and it is still doing good work. I recently bought a new 2 1/4-H.P. Galloway Engine. Whenever I need anything I always get Galloway machinery." — Ernest Winch, Guttentberg, Iowa.

"I am ordering another Galloway engine. I bought my first engine from you over 15 years ago. They sure do good work. Also have a Galloway Spreader, Cream Separator, manure carrier and spray outfit. Some of this machinery has been in use for many years and it is always ready to go when needed. I am a Galloway booster." — Knut H. Talle, Lake Mills, Iowa.

"I have been using Galloway separators and engines for many years. I have converted all of my neighbors over to Galloway. They all thought I got wonderful service out of my machinery. I'm sold when it comes to Galloway merchandise." — Cecil Gibson, Summerfield, Ohio.

"Seventeen years ago I bought my 5-H.P. Galloway engine—the first one in this part of the country. Many people who saw it work have bought the same kind since. Also have Galloway cream separator and manure spreader." — Scott Harvey, Deer Park, Md.

25 YEARS SELLING DIRECT

SILVER
ANNIVERSARY

FROM FACTORY TO FARM

The Acid Test of a Quarter of a Century

Many of our customers have been with us a quarter of a century—ever since the year we started back in 1904. They learned to look to the House of Galloway for quality, low price and satisfactory service. Then there are thousands of Galloway customers who were boys and girls at home twenty to twenty-five years ago—but have grown up and are on farms for themselves. They learned from their fathers at home that the House of Galloway was a good place to trade.

Holding these old original customers—and as the children grew up, gaining them as new customers—that's what we call the acid test on a quarter of a century in business. Just as the oak starts from the seedling and grows slowly but steadily until it stands high above others like a tower of strength—so have we grown from a small start to a strong, million-dollar company with customers everywhere, but it has taken 25 years of honest effort to do it.

The Acid Test of "Hard Times"

The acid of panics, war, poor crops and competition of every kind has tested the Galloway plan of direct-selling-by-mail-from-factory-to-user. Every year we have been tested. People who would gain if the Galloway bargain catalog was not sent out have started "whispering campaigns". They have fooled a few people, but not many. Even those who listened have come back to Galloways stronger than ever.

"Hard times", the unfair difference between the farmer's selling dollar and his buying dollar, have tested our plan. We point with pride to the big volume of business and the thousands of letters thanking us for our low prices during such years.

This kind of an acid test proves that Galloways' quality merchandise and factory prices are a winning combination for farmers, whether farm prices are high or low. Money is always worth saving.

With us, the customer is always right. That's the theory this big business has been built on. Nearly 100 per cent of our employees and organization were reared and raised on farms. We naturally have unbounded confidence in farmers and are perfectly willing to trust them to give our merchandise a fair trial and give us a square deal.

In turn, we want to say: "Send us your orders. We will treat you square."

The Test of Friendly Cooperation

We solicit your business, your correspondence and your complaints as well, if you have any. In a large organization like this, once in a while mails go wrong, letters get mislaid or something else happens which we cannot help. So if you do not get your merchandise promptly or if you do not receive an answer to your letter, don't hesitate to write us again. We want you to tell us if everything is not satisfactory. Knowingly we will not have a dissatisfied customer. If we have one today, it's because he did not tell us what he wanted. Friendly cooperation, honest correspondence and fair dealing—these are the virtues that have stood the acid test of a quarter of a century in business.

They are largely responsible for the growth of this company in its direct-from-factory-to-farm selling plan on a one-profit basis. Any orders that you send us, whether large or small, will be handled strictly along the lines of our policy of fair dealing and friendly cooperation which the acid test of a quarter of a century has proved to be right.

SELLING

FACTORY
TO FARM
ON ONE PROFIT
BASIS

"My father bought one of your 2 1/4 H. P. engines over 16 years ago and it is still running fine today. I have one of your 1 1/4 H.P. Engines and also your No. 8 Spreader. We are both Galloway boosters. Father and I have been Galloway customers for over 18 years."

Arthur D. Bartholomew,
Arcola, Ill.

"My father bought a Galloway 7 1/2 H. P. Engine many years ago. A few years later he bought another Galloway engine for me so that no one need tell us anything about Galloway products. Both these engines have done all we could expect of them and more—father and I are both well satisfied."

Harold 1. Boynton, Coventry, Vt.

"I am well acquainted with Galloway machinery as my father used a Galloway Separator for 18 years and it is still running. I have a Galloway gas engine and like it fine."

Alvin Schorn,
River Falls,
Wis.

"I have been a customer of your Company now for about 15 years. I am always willing to speak a good word for your fair treatment, your honest merchandise, your prompt service and the money that anyone can save when they buy direct from your factories. My 15 years of patronage have been rewarded by your 15 years of service and saving."
Earl Ferris, Pres., Earl Ferris Nursery Co., Hampton, Iowa.

"We are great Galloway people. We now have two Galloway engines and washing machine and we think they could not be beat on a long run. We started trading with your company in 1911."—L. P. Bachman, Great Belt, Pennsylvania.

**Every Galloway Cream Separator, Gasoline Engine
Finish in This Great Fourteen-**

The Galloway Factories Today!

Here across the top of these two pages is a view of our great modern 14-acre plant. A small city in itself—are these Galloway Factories of today.

These buildings are facts that speak for themselves, good old-fashioned facts that you could come to Waterloo and put your hands on. If there was room on this page we could show you a picture of the first Galloway office and the first Galloway factory. Over a quarter of a century ago the founder of these mammoth factories started in a small one-room store building in down town Waterloo. The first factory building could almost be lost in our present plant.

The pictures around the border of these two pages show just a small part of the equipment in these factories. These are some of the things you would see if you came to visit us. This big institution is the strongest evidence of Galloway growth.

There is a reason for all of this. There is a reason why The Galloway Company has grown and there is a reason why these acres and acres of factories are busy, running full tilt six days out of every week. Here are a few of the reasons:

Why Galloway Factories Keep Growing

Because—We give people a bigger and better bargain for their money than they get elsewhere.

Because—We prefer a tremendous volume of sales with a very small profit on each article, rather than a large profit on a smaller number of sales.

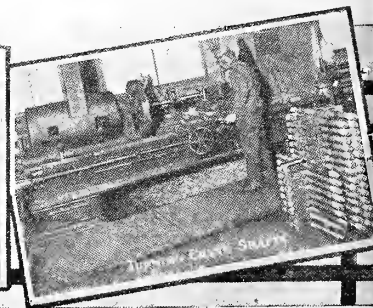

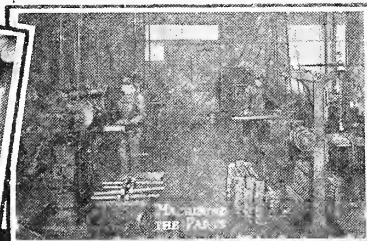

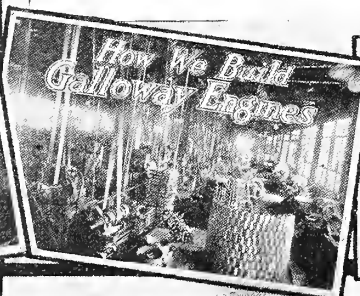

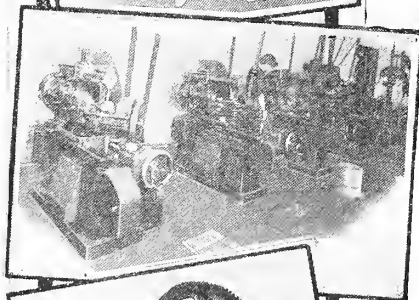

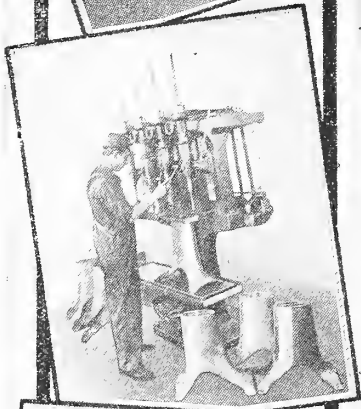

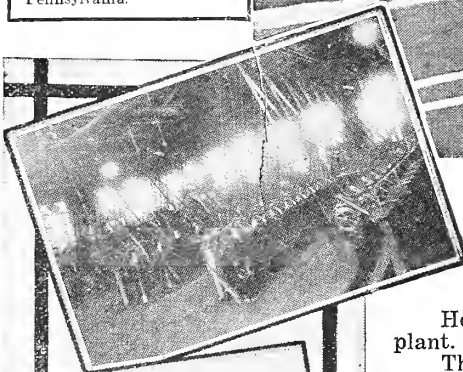

Because—We actually manufacture our own products and sell them direct at factory prices to the user, eliminating middlemen and their selling expenses and profits.

Because—We give everybody a square deal. We originated the policy of "The product must sell itself—the customer must be satisfied, or it's no sale." We were the first to give the customers a chance to try the article and the opportunity of sending it back if they didn't like it better than they did the money they paid for it.

This is the whole story "in a nutshell." These are the reasons why our business has grown: continues to grow and why customers are coming to us twice as fast as ever before.

We would be mighty glad to have you visit us at Waterloo, go through these up-to-date factories, see for yourself what there is here, see just how the Galloway products are made and convince yourself that the Galloway plan and the Galloway policy are good enough for you.

*How We Build
Galloway Engines*

25 YEARS SELLING DIRECT

ANNIVERSARY

FROM FACTORY TO FARM

"I have been a Galloway customer since 1917 when I bought my first manure spreader from you. I am so well satisfied that I have made up my mind to buy all machinery that is going to be used on my farm from Galloways, especially machines that have to do hard work." Willie Sabben, Rt. 1, Comfort, Texas.

"I am more than pleased with my Galloway separator. I recently sold one for you to W. E. Perry and he thinks that he saved from \$40 to \$50 in buying from you. I have used Galloway machines and merchandise for the past 20 years and they don't make any better." W. S. Kent, Dairy Creek, Idaho.

and Manure Spreader Manufactured from Start to Acre Modern Plant at Waterloo

Biggest of Its Kind in the World

We are not only the Pioneer Mail Order Farm Implement House of the country, we are also the largest exclusively mail order farm implement house in the world. These are the biggest factories you can find anywhere producing cream separators, engines, spreaders and farm equipment and selling these products direct to farmers by mail at factory prices!

It's the old story over again—the old story of "If you build a better mouse trap, though you live in the wilderness, the world will beat a path to your door."

The plan of selling direct-from-factory-to-farm was right. The service given our customers and our policy of a square deal were right. The products we made were right and our factory prices were right!

These mammoth factories, all busy, all working, are proof of these statements—proof that no one can "talk down." To keep a big institution like this going and growing it takes real honest values—real honest dealing with every customer because we depend on their satisfaction for additional sales.

Look Inside of These Factories

It's a sight worth seeing—one that the pictures cannot do justice to. Floor after floor, acre after acre of floor space taken up with humming, whirring lathes, boring machines, shavers, milling machines clattering hammers, punches, stamping machines, drill presses and dozens of specially designed machines, many of them automatic, working just like a human being with practically no attention from the operator.

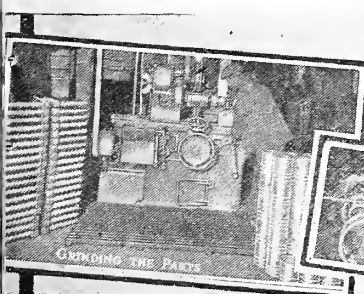

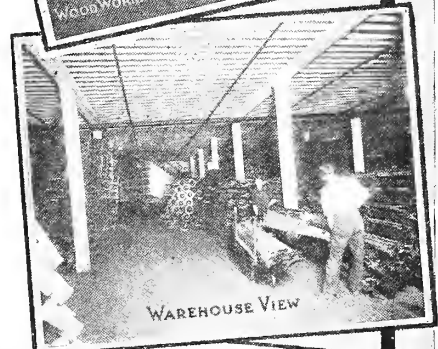

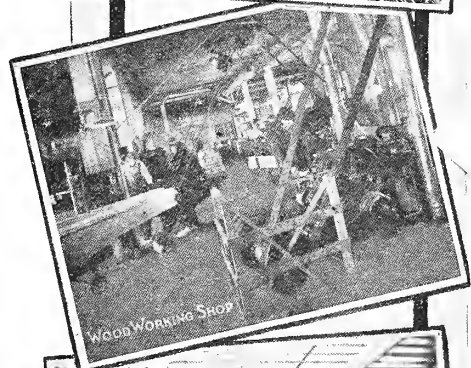

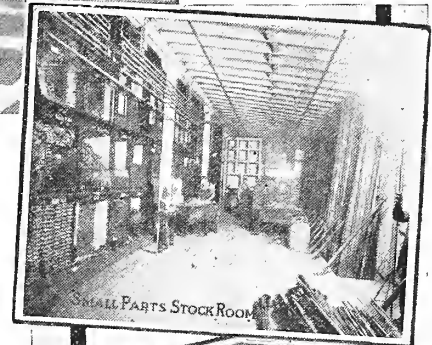

35,000 CREAM SEPARATORS. That's the capacity of our big Separator Factory. Immense production means big economies in manufacturing and lower prices to the buyer. If you come to Waterloo any day you can see some of these 35,000 cream separators being made.

10,000 ENGINES. That is the capacity of our Engine Factory. It is one reason why Galloway Engines are made just as good and yet sold for less money. Quantity production of engines gives a big saving in the cost of raw material, in overhead and labor expense.

7,500 SPREADERS. The Galloway Spreader Factory is one of the biggest in the country. It is completely equipped with modern labor-saving, time-saving machinery and methods. That's why better spreaders are built here and sold for less money.

If you buy direct from these factories you get the factory prices—no one in between to soak up "all the gravy"—no one in between to "pass the buck," if you ever need repairs or assistance of any kind.

These factories are working for you. They are going to help you save money and make bigger profits from your farming. If you ever come to Waterloo, be sure to pay us a visit. You will be welcome.

FROM FACTORY TO FARM

Our Guarantee The Cornerstone of GALLOWAY'S SUCCESS

We are proud of our guarantee. It means exactly what it says. It is the foundation of our big business. You take no risk before you buy. You take no risk after you buy.

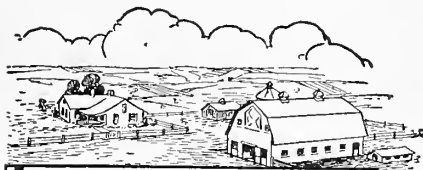

"Satisfaction, or your money back together with freight both ways" has been our motto since we started this business. It is the one big idea behind the growth of this concern from a small beginning to a million dollar institution.

The Galloway guarantee is based on equality and fairness—it is our aim to treat every customer just like we would have him treat us.

1st—QUALITY

A quality built product is more than mere words. The machine itself must "deliver." Galloway machinery has the best kind of a reputation all over the country just because it is actually quality built. We use nothing but the best, new raw materials obtainable. We are equipped with the most improved, modern machinery and our workmen are expert, skilled mechanics. We know the quality of our product so well that we are not afraid to put our guarantee down on paper in "black and white." A written guarantee as pictured on this page goes with every cream separator, manure spreader or gasoline engine. If, after you have tried the machine, you don't think it is the best buy you can make for the money, you can return it and get your money back together with all freight charges you have paid.

Remember this—IF YOU ARE NOT SATISFIED, THEN IT'S NO SALE.

LIFETIME GUARANTEE

Since we manufacture every cream separator, gasoline engine and manure spreader that we sell, these three machines are guaranteed in writing by us for the lifetime of the machine. The guarantee certificate has the serial number of the machine on it which guarantees it against any defect in workmanship or material, which means that we will replace free of charge at our factory any part that breaks on account of defective material or workmanship, whether it be at the end of one year or fifty. Can you get such a guarantee in writing from any dealer or agent and be assured that they will be here in twenty years to carry it out?

2nd—LOW PRICE

Price is another thing to be considered when you buy merchandise. After quality, then you look at the cost. We buy our raw material in tremendous quantities for our many factories—this gives us the benefit of the lowest possible price and the biggest discounts. We manufacture on a large scale by the most economical improved methods—this cuts down manufacturing expense. Then we sell direct by mail to the user—this saves you all of the middlemen's profit and the selling expense of the four-profit system. Add these things together and you can readily see that it means big savings when you buy at Galloway's factory prices.

Did you ever buy anything at wholesale. If you did, the article you got was just the same as though you had bought it at retail—but the price wasn't the same, was it? That's just the point with Galloway products. It costs as much to build them because they are of the best quality but it doesn't cost as much to sell them, and that's where your saving comes in.

3rd—PROMPT SERVICE

Same day service—that means your order filled and shipped the same day it is received. Service like this is our policy. A few hours, in some instances only 30 minutes, elapses after your order comes in the mail before it is on its way.

Think of this—the big Galloway Factories are as near you as your mail box! A lot closer than any dealer! Having our catalog handy is like having a complete farm equipment factory right on your farm.

If you're in a big rush—have your local banker wire us he is sending the money on your order, tell us what to ship, where and who to send it to, and we will make shipment at once without waiting for your order to come in. We always ship the cheapest way but in rush cases we send by express and can even send repairs by air mail. You will find it MORE SATISFACTORY TO DEAL DIRECT WITH THE MANUFACTURER.

4th—SATISFACTION

THE CUSTOMER IS ALWAYS RIGHT—another of our cornerstone policies that has made friends for us from one end of the country to the other. We originated the trial method of selling—it is your complete protection and your guarantee of absolute satisfaction. When you deal with us you don't need to be afraid of "getting stung" or of having to keep something you don't want. After you have received your order and inspected or tried the merchandise, if you are not satisfied we want you to get our shipping instructions for its return and we will cheerfully refund your money.

Waterloo, Iowa November 15, 1920

TO WHOM IT MAY CONCERN:

We have a personal acquaintance with the officers of the Galloway Company and consider them men of high standing. They have customers from every state in the union which have been obtained by prompt service and fair treatment.

Yours very truly,

Frank Johnson

President,
Pioneer National Bank.

The Waterloo Savings Bank
CAPITAL \$100,000.00
RESERVE \$100,000.00

Waterloo, Iowa

November 4th, 1920.

TO WHOM IT MAY CONCERN:

I am personally acquainted with the officers of the Galloway Company and know them to be men of high standing and integrity. Anyone wishing to deal with the Galloway Company may be assured of honest treatment and, in my opinion, runs no risk in sending his check along with the order.

Yours very truly,

WATERLOO SAVINGS BANK

J. E. Johnson
PRESIDENT.

The Commercial National Bank
CAPITAL AND RESERVE
\$1,000,000.00

Waterloo, Iowa
November 5, 1920.

TO WHOM IT MAY CONCERN:

The officers of the Galloway Company are conservative and reliable business men whom we consider worthy of the confidence and respect of their customers. The fact that this bank has not received a single complaint from purchasers of Galloway merchandise is a good recommendation for their product and the satisfactory treatment their customers receive.

We believe the company will live up to their agreements and their customers can deal with them with perfect safety.

Yours very truly,

Wm. H. H. H.
CASHIER.

The Keystone That Justifies Your Confidence & Patronage

25 Years of Doing Business at the Same Old Stand

A quarter of a century of doing business with our "slate clean"—this is our record. The nice things our home town banks say about us simply backs up our reputation for square dealing and for four-square responsibility.

It is the keystone of our continuous growth. It is the reason why hundreds of thousands of farmers send their orders with money enclosed to us every year in perfect safety.

Now we want you to feel safe in sending us your order. We want you to know that even though we are many miles away from you, your money is as safe with us as it would be in your own pocket. Distance has nothing to do with honesty. If a man is honest, he will be honest no matter how far away he is—and if he is dishonest he will be dishonest no matter how near he is.

Three of Waterloo's leading banks have voluntarily written some very nice letters about our company and the men who are directing its affairs. We have photographed these letters and reproduced them on this page. Read them over and see if you don't think they speak pretty well for the way our company stands at home.

We Don't Have to Put Up Any Guarantee or Banker's Bond

Years ago our company, like some others are still doing today, put up a security bond with some bank as a guarantee of safety to the customers who sent us money with their orders. We used to do this—but it is no longer necessary. Our company is known and its standing recognized in every corner of the country today.

We are glad to give you the names of our officers and directors as well as show you what our bankers say about us. If you want further information regarding our responsibility, we would be glad to have you write either of the large mercantile agencies or write to the postmaster, the mayor, the express agent or any railroad agent in Waterloo.

25 YEARS SELLING DIRECT

SILVER
ANNIVERSARY

FROM FACTORY TO FARM

SAVE $\frac{1}{2}$ YOUR DOLLARS!

HELLO FOLKS—I am glad to greet you all again this year.

I am especially glad because 1929 is our Silver Anniversary and I have something good to tell about the way I am going to celebrate our 25 years of selling farm implements direct by mail.

See the half of the big silver dollar I am holding in the picture?

That's what I want to talk to you about.

At a meeting some time ago of my Department heads, we were going over our plans for celebrating Galloways' Silver Anniversary. I asked everybody to contribute something to make this celebration really worth while.

My General Factory Superintendent told me he was producing the best cream

separator we had ever built—in fact, as good if not better than any machine there was on the market, and that big improvements had been made in our spreader line and likewise in our engine line. This meant I could offer you the best, the most up-to-date products. That was fine—but I had to have more than that.

Then the boys promised to "step up" on shipping, and in fact everything else. Finally one of them said: "Let's make our customers a price that will save them from 20 to 50 per cent on everything they buy." He "hit the nail on the head." The half of the silver dollar I am holding represents the saving we want to make you this year.

Why Galloway Prices Are Lower

You probably wonder how I can make this lower price — how I can save you from 20 to 50 per cent of your buying dollar. This is a hard thing for some people to understand but there's nothing mysterious about it.

IT IS BECAUSE OF MY SYSTEM OF DIRECT SELLING!

STOP AND THINK A MINUTE. Every cream separator, engine, or whatever the merchandise is, becomes a finished product when it is put in a box and nailed up tight at the factory. Under the jobber-salesman-dealer system of selling, the factory sells to the jobber. Does the jobber open up the box and put anything in? No, but he adds to the price. Then the jobber has traveling salesmen who call on the dealers. Do they open up the box and put anything in? No, but their expenses and salaries are added to the price. Then the dealer must have a living profit. Does he open up the box and put anything in? No, but he has to add to the price. The purchaser ultimately pays all of this extra selling expense.

When you buy direct from the Galloway Factories you get **JUST AS GOOD MERCHANDISE**, you get the same finished product boxed at the factory, but you save 20 to 50 per cent because you buy at the **Factory Price**.

This Catalog Is My Traveling Salesman!

Hundreds of thousands of my salesmen (I mean, catalogs) travel in mail sacks to every point in the country for a few cents apiece. Now—think of the small army of traveling salesmen who ride across the country in the railway trains, and the still bigger army who are keeping the roads hot with automobiles. This traveling, Traveling, TRAVELING costs somebody some money. Railway fare at 4c a mile and gas and automobile bills have to be paid by somebody. The average traveling salesman's salary and expense today is at least \$100.00 per week—over \$5,000.00 per year. Now stop and consider **HOW MANY CATALOGS**, like this one, I can send out for just what **ONE TRAVELING SALESMAN** would cost in a year, or even in a month for that matter.

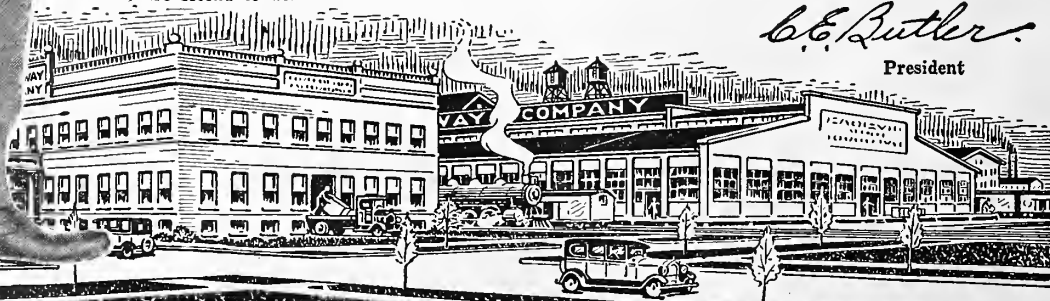

When you send me an order for anything in this catalog, you are **PAYING ONLY FOR THE MERCHANDISE YOU GET** and not for the traveling expenses of some jobber's organization.

YOU CANNOT BEAT THE FACTORY PRICE. IT IS ALWAYS THE LOWEST. IT IS THE CORRECT WAY TO BUY AND TO ECONOMIZE.

Our customers have never failed us.
I want you on my list of customers.
Here's my catalog. Look it over.
You have read the story.
You know my policy.

All I want to say in closing is this—I don't care what you order, how small it is, order something and let me prove to you that my factories really do save a part of your dollars for you—and that I am a fair, square friend to deal with.

B. E. Butler
President

“GALLOWAYS' NEW MASTERPIECE”

BALL BEARING SEPARATOR

Closest Skimming

New Masterpiece bowl of improved design skims perfectly to the last trace—it is easily set to give you the exact thickness that you want in cream. It always gives a uniform test.

Easiest to Turn

New Ball Bearing construction and wonder working gears make it turn easily—smoothly—and almost silently. The children can turn this new Galloway and are glad to do it.

Easiest to Clean

Its simple design makes it sanitary as a tea cup—the built-in spindle and other enclosed parts reduces cleaning to the minimum. Less parts to wash—saves you work.

Beautiful Appearance

New luster finish in latest green shade with dainty trimmings in gold combined with its gracefully rounding surfaces make it the most beautiful separator in America.

Automatic-ally Oiled

Improved self-oiling system automatically starts and stops with machine—furnishing constant lubrication to all wearing parts. All you have to do is change the oil occasionally.

Detachable Bowl

This New Masterpiece bowl is built separate from the spindle which always stays in the machine—the bowl lifts off easily but has positive action driver when set back on.

Built-in Spindle

The only one of its kind—built right in the machine—and while it can be quickly removed, it never need be even for cleaning and oiling. It never flies out, either.

Lowest in Price

We gave it quality first—then low price. The New Masterpiece sells for a lot less and is guaranteed as good as any separator made regardless of price. Try it against any other.

Our Greatest
Achievement

Announcing The New BALL BEARING Masterpiece

A New and Better Cream Separator! The Latest and Greatest Achievement of the Galloway Factories!!

Two years ago Galloway engineers, designers and factory experts were called together and ordered to produce a **newer and better cream separator**—a cream separator that would be the easiest turning, the closest skimmer, quietest running, the easiest to wash, the most sanitary inside and outside—one that would automatically oil itself and yet be of simple, practical construction so that it would be sure to give years of satisfactory service without any trouble or repairs. Then they were ordered to give this new separator some new advance features in cream separator building that no other cream separator in the world ever had.

THEY DID IT! They produced a **quality machine** from every standpoint and with no other idea in mind **BUT QUALITY**. They knew nothing about price—and cared less—because their job was to produce a quality separator in every respect.

A Tribute to Inventive Genius

Galloways' New Masterpiece Ball Bearing Cream Separator is the biggest advance step—the greatest achievement—in separator designing and manufacture made in the last 10 years. It is the result of years of work, study, experiment and experience. Galloway engineers and factory experts have been working on and testing out every feature of this New Masterpiece Model, as well as of all other makes of separators, for a long time—we have purchased the latest models of various other makes of separators and had them running constantly every day, from morning until night, right along side of our own New Masterpiece Model. The operation of these various machines was closely studied in every detail and the amount of wear on each one of them accurately checked at certain periods. We also put a large number of the New Masterpiece Separators in the hands of actual dairymen in various states in order to add their experience to our own.

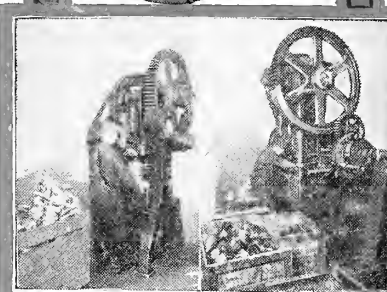

This is how the wonderful New Masterpiece Ball Bearing Model was produced. This new and better cream separator is the result. **WE HAVE ANNOUNCED IT AS THE LEADER OF THE ENTIRE FIELD FROM THE STANDPOINT OF DESIGN, IMPROVEMENTS, PERFECT SKIMMING, LIGHT TURNING, EASY CLEANING AND LOW PRICE.**

The Equal of Any in Quality—! Yet the Lowest of All in Price.

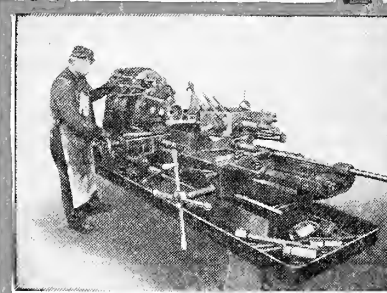

Read about the wonderful new features of this quality-built separator. What can you get in any other separator that you do not find in the New Masterpiece? It was produced with the sole idea in mind of being the best quality machine that money, skill and brains could produce.

Then after the separator was all done—quality-built throughout—then we thought of price.

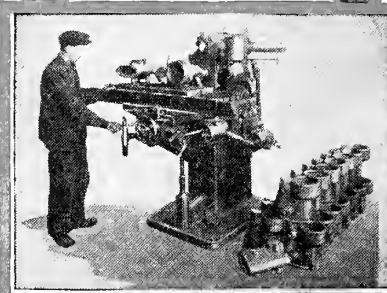

The tremendous increase in volume which this new separator is bringing, the decrease in manufacturing overhead and the Galloway system of direct selling from-factory-to-farm **MAKE A LOW PRICE POSSIBLE**. Compare our prices with what others are asking for separators not one bit better, if as good. Compare and judge the price for yourself, but before you buy any machine, why not try the New Galloway Masterpiece on your own farm for 90 days? Then you can judge quality, too, for yourself. Then you will be in a position to buy where you can do the best and get the most for your money.

Two of our 20-ton stamping presses.

One of our big automatic spindle machines.

Big gear case boring machine.

**Go &
PRODUCE**

**A Better Made
A Closer Skimming
Easier Turning
Longer Lasting
SEPARATOR
Than The
GALLOWAY
MASTERPIECE
at Any
PRICE**

We Challenge The WORLD

Yes, sir, we challenge the world to produce a better cream separator than the New Galloway Ball Bearing Masterpiece at any price.

We challenge the farmers and dairymen of America to find a better cream separator any place, regardless of who makes it or how much money they are asking for it.

We come right out in the open and offer to match this New Masterpiece Model against any other cream separator made, regardless of price.

The Galloway factories have been building—and building every day—cream separators by the hundreds for many, many years. There are over 100,000 Galloway Cream Separators in actual use on the best farms in America today. Galloway Cream Separators have been constantly improved—our business has increased and as our factories grew, new machinery and equipment of the latest automatic type and design were added. Today the Galloway factories have the benefit of all of these years of experience in cream separator building, the benefit of the knowledge of men who have made cream separator building their life work and study, the benefit of the latest and best machinery and manufacturing methods, the benefit of quantity buying at the biggest discounts available on the highest quality raw material to be obtained.

Why shouldn't we build just as good a cream separator as anybody—or, in fact, a little better than many others.

Just Notice These New Features!

- 1. BALL BEARING—**
A practical use of the highest type ball bearing construction has been adapted to the New Masterpiece in a practical way. Makes easier turning and less wear on the working parts.
- 2. BUILT-IN SPINDLE—**
New exclusive Galloway feature. Spindle stays right in the machine all the time—need not be removed even for cleaning or oiling.
- 3. LOW SPEED NEW DETACHABLE BOWL—**
Lifts right off of the spindle. Sets flat on the table. Skims perfectly at low speed because of a special design of discs and milk delivery to discs.
- 4. AUTOMATIC OILING SYSTEM—**
Stops and starts with the machine—sure to oil every working part and gear without any attention on your part.
- 5. NEW WONDER GEARS—**
Simple, sturdy set of helical cut gears, accurately balanced to eliminate side thrust, reduces friction—they run smooth and quiet.
- 6. POSITIVE ACTION CLUTCH—**
New type clutch has three full catches to each turn of the crank and it never slips. Works with either hand turning or power machines.
- 7. NEW SPEED INDICATOR—**
Simple little device shows plainly just how fast to turn the crank—it insures a uniform cream test.
- 8. BEAUTIFUL LUSTRE FINISH—**
Permanent lustre finish, both beautiful and sanitary. The latest green shade with dainty trimmings in gold.
- 9. LIFETIME GUARANTEE—**
Guaranteed in writing by the manufacturer for the lifetime of the machine—which means repairs free as long as you use the separator if it is our fault.
- 10. SURPRISINGLY LOW PRICE—**
First time every worth-while feature can be had on a real quality-built machine at a saving of 30 to 50 per cent of what others are asking.

Don't Overlook These Points

While close skimming, easy turning and easy cleaning are the big points to watch in buying a new cream separator, there are a few other important features on the New Masterpiece Model—little points worth having.

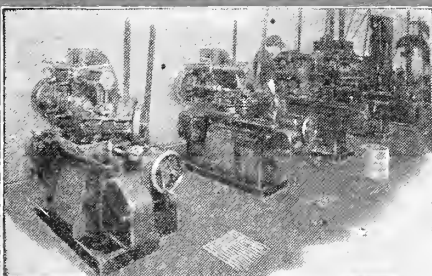

Our big capacity milk supply tank is pressed out of one piece heavy gauge steel. Just slide it back a trifle on the bracket and you can remove the bowl easily.

The cream pail shelf and bowl vise are combined in one piece and hinged on the side of the drip pan so it can be raised or lowered out of the way.

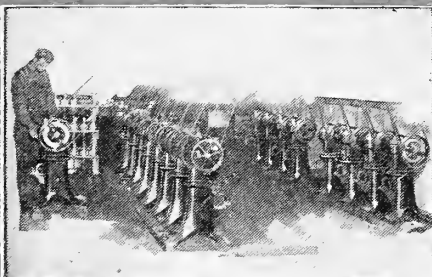

The crank is only 10½ inches long—this short crank is located at exactly the proper height on the machine to keep from breaking your back in the bending motion.

The New Masterpiece stands on a strong substantial pedestal—no spindly or wobbly legs—it is easy to clean under as well as around.

The complete machine has smooth rounding surfaces on the outside with no sharp corners or cracks where dirt or dust can collect.

Automatic Gear Cutting
Machines.

Individually testing every
Separator.

Final Inspection of a
day's run.

WHAT WOULD YOU DO

If Your Present Separator

- Was worn out?
- Was unsanitary and spoiled your cream?
- Turned so hard it was killing you off?
- Was too small for your present sized herd?
- Wasted a little cream every time you used it?

Here's What You Would Do

YOU WOULD STOP THAT CREAM WASTE JUST AS FAST AS YOU COULD. Cream wasted is money wasted. Cream is valuable. You should watch it and see that every bit except what is used on the table goes to the cream station. You wouldn't use a leaky cream can—or feed cream to the pigs—then why let a worn out separator waste cream for you?

The cream separator must save ALL of the cream or it's worse than useless—it's a thief—it steals cream every night and every morning. Your separator may seem to be in fair or good condition—still it may be wasting cream for you. A late report issued by the Iowa State College of Agriculture on cow testing associations showed that members who were using old cream separators lost \$522 last October and over \$600 last September by their poor skimming. Hundreds of other farmers are no doubt losing cream but have not realized this loss because their skim milk has not been properly tested.

Do You Get It All?

A lot of emphasis has been placed the last few years upon getting rid of the "boarder cows"—also upon proper feeding and rationing, upon the proper care and housing of the dairy cows—all of which brings up the question, "Are you saving all the cream that your cows produce for you?"

Constant dripping weareth away stone and a continual loss of cream each night and each morning, no matter how small, soon counts up. Constant saving even if small, also counts up quickly. Don't take it for granted that your cream separator is all right—you should KNOW. It may be stealing more from you every year than you would have to pay for a New Galloway Masterpiece. After going to all of the work, trouble and time of getting the whole milk, it will certainly pay you to make sure that your cream separator is getting ALL OF THE CREAM. It is not fair to yourself or fair to your cows to let an old worn out separator—or none at all—steal cream from you out of every milking.

Over 100,000 GALLOWAY USERS SAY— "We Saved More the First Year than Our New Galloway Separator Cost Us"

Fred Vast, Schaller, Iowa, says his new Galloway Separator skims so close that the calf refuses to drink the skimmed milk.

Samuel E. Hart, Ava, Missouri, says his old separator wasted over \$100 a year until he bought his new Galloway Separator which skims perfectly.

Claude L. Turner, Lost Springs, Wyoming, says his cream checks ran from \$4.28 to \$6.25 on each 10-gallon can of milk—but as soon as he started using his new Galloway Separator he got \$7.60 to \$8.00 on each 10-gallon can.

100,000 farmers, careful buyers, have bought the New Galloway Separator without being urged by high-pressure salesmen—we told these farmers about the Galloway just as we are telling you now—they accepted our 90 days' trial offer—used the Galloway on their own farms—compared it with other makes at various prices—decided to keep the Galloway because it beat them all for close skimming, for easy running, for sanitation, for durability and for low price.

The saving that any New Galloway Separator will make for you over and above your present old or worn out machine will pay for itself in less than one year's time.

If

—Your cows kicked the bucket over regularly?

—Your cream can sprung a leak?

—Your cream can fell out of the auto every morning?

—Your hired man poured cream in the hog troughs?

—Your hired girl kept skimming from crocks by the old hand method?

—The calf sucked the best cows you have in the herd?

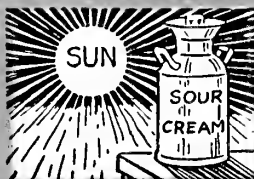

—You found someone stealing cream out of your cans?

—A lot of cream standing on your skim milk after separating?

Do You Want Proof

of Cream Saving?
of Easy Running?
of Satisfactory Operation?

You don't need to take our word for what the New Galloway Masterpiece Cream Separator will do for you. We say: "Try it 90 days on your own farm—judge for yourself—keep it or not as you please."

WHO GETS THE EXTRA \$50

You Pay For Most Cream Separators

MOST ANY OTHER SEPARATOR WILL COST YOU FROM \$30 to \$50 MORE THAN THE NEW GALLOWAY BALL-BEARING MASTERPIECE

THAT'S A LOT OF MONEY! A difference of \$30 to \$50 is too much between the prices of two cream separators that will give you the same service. Any man is smart enough to know that it only takes about so much material and labor to build a cream separator. All of the standard makes of cream separators weigh about the same, have about the same capacity and when it comes right down to it, cost about the same to build, but—THEY DO NOT SELL FOR THE SAME PRICE.

Other manufacturers cannot and do not put any better material into their machines, cannot and do not use any more up-to-date methods and machinery in manufacturing, cannot and do not have any better engineers or workmen in their factories, do not put this difference in price in the pay envelopes of their employees.

WHERE DOES THIS EXTRA \$30 AND \$50 GO?

WHO GETS IT?

Why can the Galloway Separator be sold for so much less money than other machines not one bit better?

BECAUSE OF OUR ONE-PROFIT DIRECT-FROM-FACTORY-TO-USER SELLING SYSTEM. The extra money you pay for other separators does not go to the factory that builds them—BUT IT DOES GO TO THE JOBBER-SALESMAN-DEALER COMBINE OF FOUR-PROFIT SELLING.

Every cream separator is completely made, assembled, put in a box and nailed up tight IN SOME FACTORY. Under the four-profit system the factory sells to the jobber. Does the jobber open up the box and put anything in? No, but he adds to the price. Then the jobber has traveling salesmen who call on the dealers. Do they open up the box and put anything in? No, but their expenses are added to the price. Then the dealer sells and must have a profit to live on. Does he open up the box and put anything in? No, but he adds to the price. Somebody pays all of this needless and useless expense of doing business on the four-profit plan. These "somebodies" are the customers who buy the machines. The consumer ultimately pays every time. You will be one of those "somebodies" if you buy a cream separator sold through any dealer or agent.

The Factory Price Is Always the Lowest!

The Galloway system of direct selling from our big factories to the farm eliminates every time possible in the expense of selling. We do not have a single salesman or dealer. No salesman to call on the jobber—no jobber to sell through other salesmen again to the dealer—no dealer to support. We are not a member of any dealers, salesmen or jobbers association—they won't have us. We are not eligible. We are not connected with any combine or trust. Nobody gets their heads together with us and sets our prices. We own our factories from cellar to garret. We are absolutely independent of any other concern. Our low price is set by adding on one reasonable profit to the actual cost of the best grade materials and labor necessary to produce the machines.

Compare Prices Before You Buy or Trade

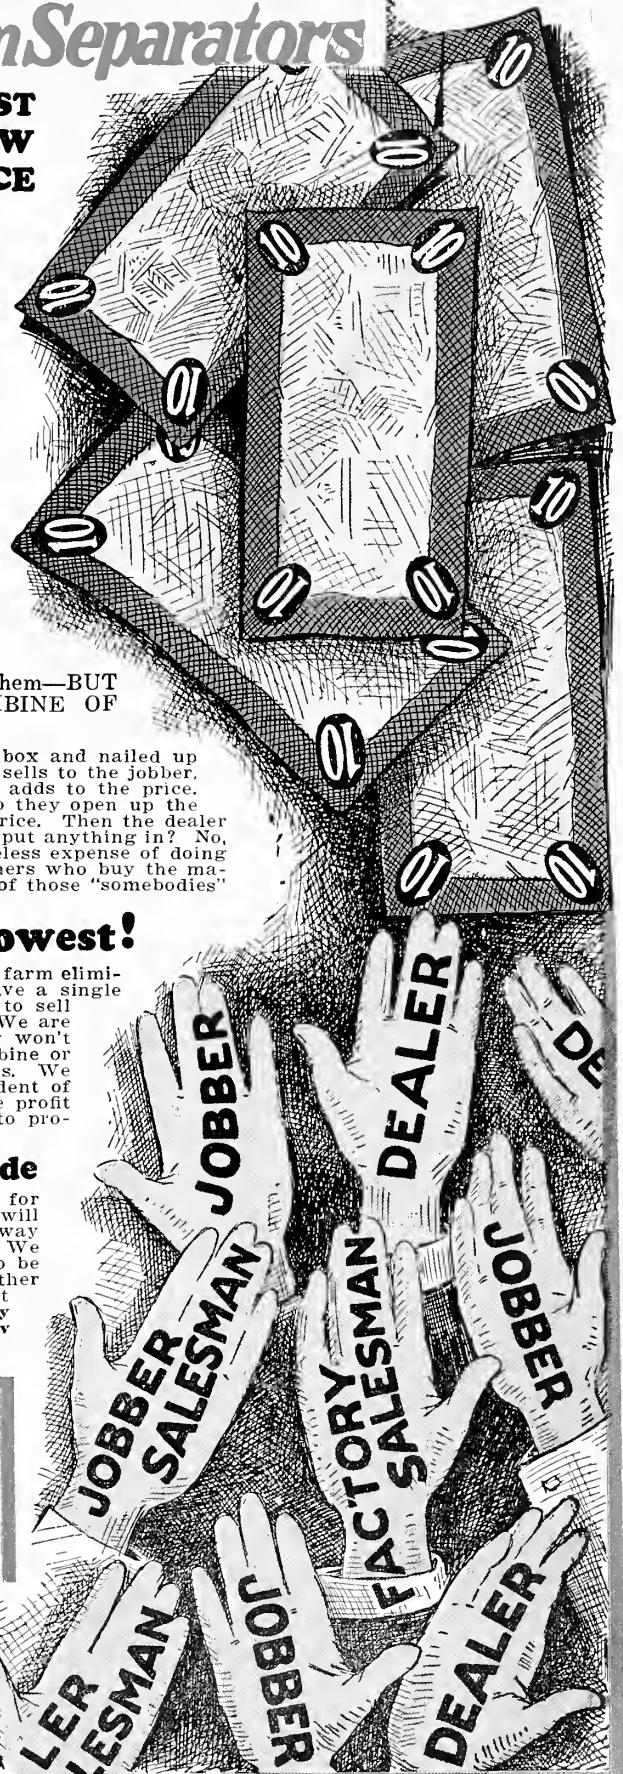

If you don't know, you can easily find out what dealers are asking for their separators. The average 750-lb. cream separator at the dealers will cost you not less than \$100 and up as high as \$125—the New Galloway Masterpiece Ball Bearing in the 750-lb. size only costs you \$68.90. We guarantee the New Galloway Masterpiece Ball Bearing Separator to be the equal of any regardless of price. We will match it against any other machine of any make. You can test it against any separator you want to and keep whichever one is the best buy for the money. Don't pay a high price for anybody's separator until you have given the New Galloway Masterpiece a trial.

BEST TRADE ALLOWANCE!

We'll trade you just as good a cream separator as there is made for a lot less cash difference than anyone else asks you—which means the best trade deal you can get.

We will give you a trade allowance no matter how old or what make your separator is—don't go and pay any dealer or agent \$100 or \$90 or even \$75 cash difference until you have at least received our trade proposition. Tell us what kind of separator you have and what style and size of New Masterpiece Separator you want and we will make you the best trade proposition you ever heard of.

How Many of These Hands Are You "Warming" with YOUR MONEY?

THE GALLOWAY BOWL

Close Skimming and Sanitary Simple and Easy to Clean

Perfected by Years of Experience

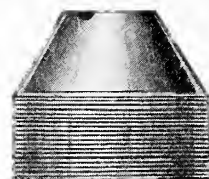

Above shows the complete bowl of the New Masterpiece Separator. It is detachable from the spindle and the improved design of this new bowl makes it skim as close as any mechanical device can do.

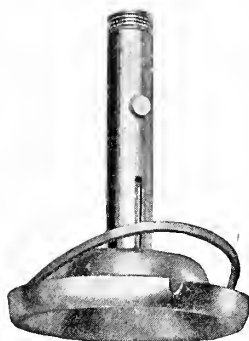

It is short and heavy. It is easily lifted off or put on the new style built-in-spindle.

Above shows the heavy steel bowl shell and top nut. The bowl shell fits over the discs and into the bowl bottom perfectly and slips on and off easily.

These few discs do a lot of skimming—and do it well, in the Galloway Masterpiece.

Above shows the heavy steel bowl bottom and stem upon which the disc holder and discs fit. The rubber ring fits perfectly into the bowl bottom groove and when the bowl shell is properly screwed down, it makes the new bowl absolutely leak proof.

The base of this heavy steel disc holder forms a chamber in the bowl bottom where any foreign matter in the milk is held until the skimming is finished when it can be washed out.

Then Came the Wonderful New Masterpiece Bowl

This wonderful New Masterpiece bowl is the latest design and the most efficient skimming device the world has yet known. It is an improvement over our former models. Our engineering, research and experimental departments worked for months and months on this new bowl. They skimmed cold milk, warm milk, rich milk, lean milk—they skimmed for thick cream and for thin cream—they skimmed Jersey milk, Holstein milk, Guernsey milk and just plain milk—they tested this new bowl against most every cream separator made, for full capacity close skimming under all circumstances and conditions.

Then they announced this New Masterpiece Improved Bowl as the latest in design, and most efficient skimming device known today.

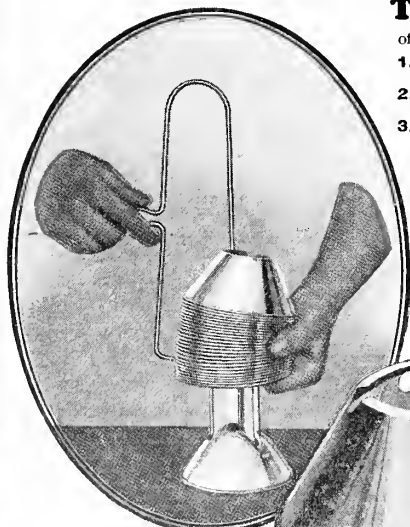

This New Model Masterpiece bowl is short, heavy and has fewer discs than other bowls of the same capacity. It is so accurately made that its new improved design and the special method of delivering the whole milk to the bottom of the bowl distributes the milk evenly and constantly to each disc so that every disc does its full share of skimming and this new bowl delivers full capacity, efficient skimming at all times.

The complete bowl is sanitary and easy to wash. The bowl shell, discs, disc holder, bowl bottom and all are easily and quickly assembled and taken apart. Every piece is perfectly made of best selected steel and carefully and heavily tinned—all corners are rounded and surfaces curved, making the bowl as sanitary as a dinner plate.

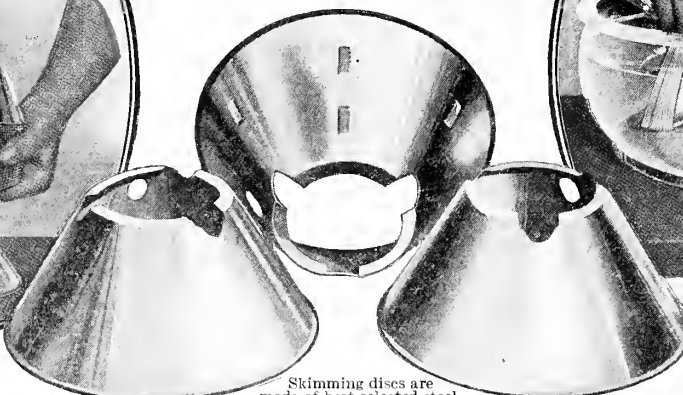

The Outstanding Features

of this wonderful new improved Masterpiece bowl are:

- 1. SIMPLICITY OF DESIGN**—Fewer discs doing better work.
- 2. EFFICIENT SKIMMING**—At much lower speed than other separators.
- 3. SANITARY FEATURES**—Easily and quickly taken apart, washed and assembled again.

You can easily and quickly slip the discs from the rack onto the disc holder as if they were one piece.

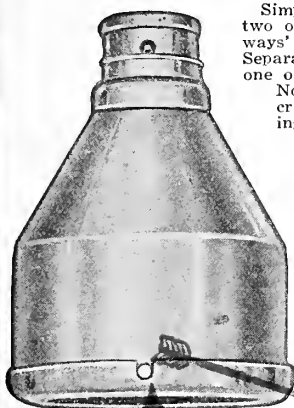

Skimming discs are made of best selected steel, specially designed and carefully tinned in our own factory.

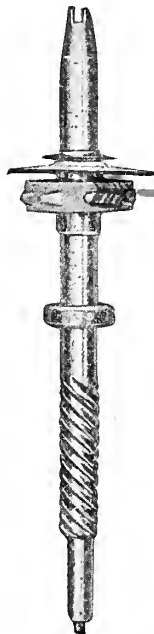

It's a simple operation to thoroughly wash the discs which are entirely separate from each other.

BEST AND LATEST FEATURES

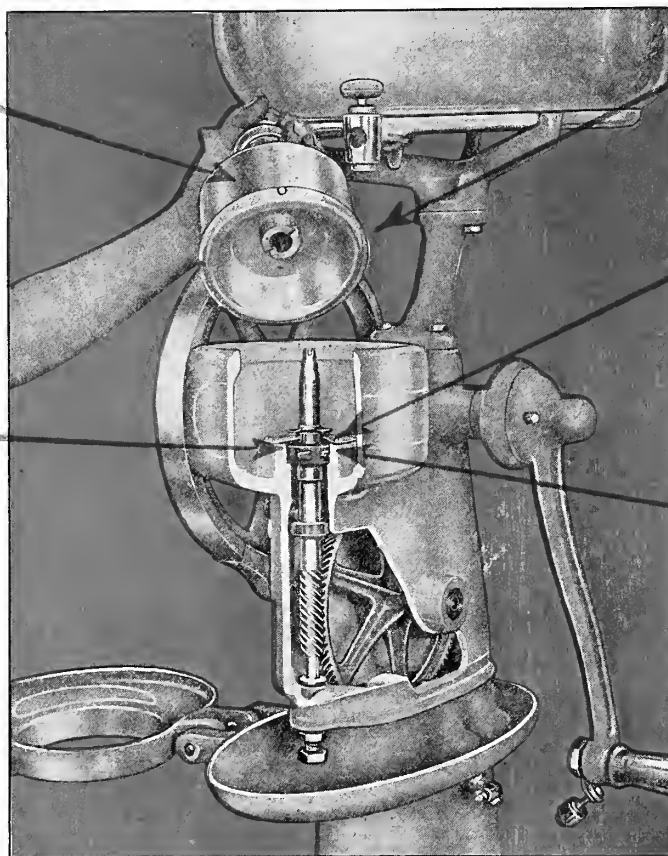

Simplicity of Design---Well-Balanced Construction

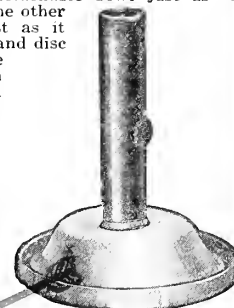

The bowl and spindle illustrated here are in proper proportion as to size and show how they look when the bowl is lifted off the spindle.

Simplicity of design and construction are two of the outstanding features of Gallo-ways' New Ball Bearing Masterpiece Cream Separator. In fact, this very simplicity is one of the things that makes it so good. No unnecessary wearing parts to increase the friction and make hard turning—no complicated mechanisms to get out of order—no cumbersome machinery to add unnecessary weight and expense. This complete machine has been trimmed down to a neat, simple and yet well-balanced, sturdy mechanism that does the job with the least amount of wear and tear on the machine, on your back or on your pocketbook.

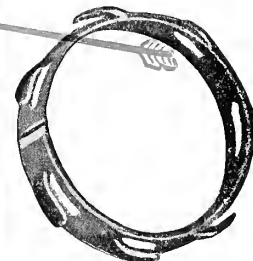

The illustrations on this page show you the picture of the new built-in spindle as it would appear if lifted out of the machine. Directly above the spindle is the new detachable bowl just as it appears when lifted off the spindle. On the other side you will find the bowl bottom just as it would appear after the outer shell, discs and disc holder are removed from it. The middle illustration is the main ball bearing on the spindle. The lower illustration is a picture of the new ball bearing spring. The cut-out view in the center shows the spindle in place in the separator with the bowl lifted off of it or in position to set back on because the lock stud on the bowl shell is directly in line with the notch in the top of the spindle.

The bowl bottom sets on a table or any flat surface. It has a recess in it where the spindle fits in. There is a cross pin in this recess which fits into the notch on the top of the spindle.

This illustration shows the main upper spindle ball bearing. We pay a premium on each bearing for the privilege of sorting over the stock of one of the largest ball bearing manufacturers and taking only those that come within our measurement limits of $\frac{2}{10000}$ of an inch.

This is the new style neck bearing spring or rather ball bearing spring because it fits around the ball bearing shown above. It is all in one piece and there are no extra springs or parts to bother with.

New Built-In Spindle

The new design specially constructed spindle is built right in the separator—locked in with a set screw and need never be removed from the machine even for cleaning or oiling. Picture of the complete spindle above shows the steel washer or lock stud collar on the spindle just above spiral threads. A set screw in the gear case screws in above this steel washer which locks the spindle in the machine and prevents it from ever flying out or from lifting part way out and then falling in again when you take the bowl off.

Above this steel collar is the main ball bearing with ball bearing spring around it. This ball bearing slips snugly over the bronze sleeve on the spindle so that it can be quickly slipped off and replaced with a new one if occasion ever requires.

Above the ball bearing is a metal cover which screws down to the gear case and above that yet is a metal deflector which turns with the spindle and throws any water or milk that drops on it out against the side walls of the bowl pot where it can be easily wiped off. The notch in the top of the spindle fits over cross pin in the base of the bowl bottom which prevents slipping and insures full turning speed of the bowl. The complete spindle can be quickly removed from the machine by removing the set screw above the lock stud collar and the three small screws from the metal ball bearing cover. Then the complete spindle with ball bearing and all can be easily lifted right out of the machine.

New Detachable Bowl

The New Masterpiece Model bowl is separate from the spindle and can be easily set on or lifted off. It will set on the table or any flat surface without leaking and by leaving the spindle in the machine you are not dripping oil all over everything when you take the bowl out to wash it.

There is a cross-pin in the hole in the bottom of the bowl. When the bowl is set down over the top of the spindle, this cross-pin fits in the notch in the top of the spindle. The top of the spindle is tapered at exactly the right angle to permit the bowl to be lifted off and set on easily without sticking—and yet it fits perfectly so that the bowl cannot wobble and the cross-pin insures turning the bowl at the correct speed, and without slipping.

Every part of this new bowl is completely made in our factory on the latest type of automatic machines out of the best grade selected steel. Every part is carefully inspected, tested and then re-inspected before it is permitted to go out into the finished machine. The bowl construction is simple yet strong and durable. All parts are heavily tinned to prevent rusting. Its design has not only passed most severe operating and skimming tests, but also the tests of sanitary experts. It is easily taken apart, quickly and easily washed and any woman or girl can put it together again in a jiffy. It is so skillfully made and yet so simple that you will wonder at its marvelous performance.

2 MASTERPIECE CONSTRUCTION 2

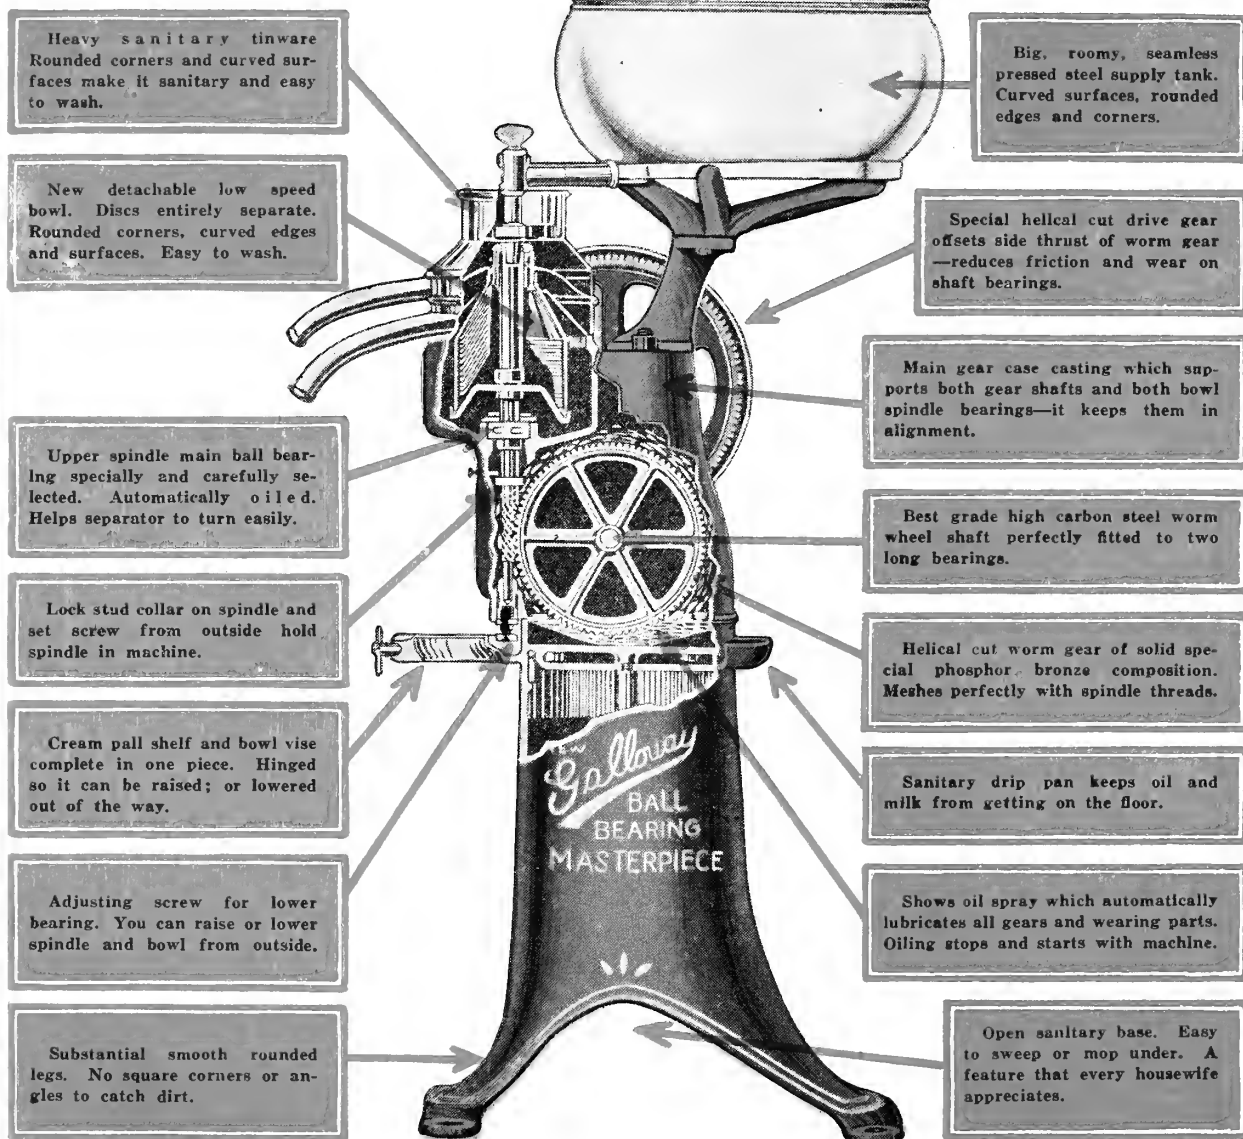

Built for Years of Satisfactory Service

The New Improved Ball Bearing Masterpiece Separator is a wonderfully constructed machine. It has no secrets to keep—nothing to cover up. Every detail of its construction has been given careful attention by experts. The X-ray view on this page shows the working parts in place and illustrates the many points of superiority of this improved new model separator.

The correct height of the crank as well as the correct length of the crank, the special designed helical cut gears, the automatic

oiling system and the ball bearing construction makes the New Galloway Masterpiece a perfect running machine for years of satisfactory service.

Study the illustrations closely and read the explanations. This separator is not only correctly designed from a sanitary standpoint and to give efficient service, but also from the standpoint of graceful lines, correct proportions and beautiful appearance.

Automatically Oiled

Any cream separator will run hard if not properly oiled. It will also wear more if not constantly oiled. When oiling is an everyday job, it is not only bothersome but you are very apt to forget or overlook it. That's why we made the oiling system on the New Masterpiece so it will automatically take care of itself. The minute you start turning the crank, the oil supply starts, furnishing constant lubrication to all bearings and every other working or wearing part. Changing the oil in the gear case—draining out and refilling—is done entirely from the outside without removing the spindle and is only a minute's job. Everything else takes care of itself, so far as oiling is concerned, without any attention on your part.

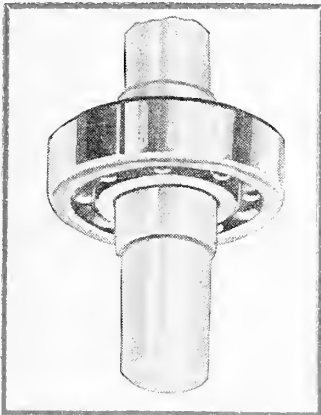

Easy to Clean

It is usually the woman's job to wash and clean the separator—and most women hate the job. The New Masterpiece is as sanitary as a dinner plate—and as easy to wash and keep clean as a machine of this kind can possibly be. The big, one-piece supply tank does not have a drop of solder on it except where the faucet is attached—not a single crack or crevice or corner in the supply tank or bowl where filth can collect and stay. There is a specially designed chamber formed by the base of the disc holder where all foreign matter collects while separating and it is easily cleaned out when the job is finished. Even the outside of the machine, including the base, has all rounded surfaces with no sharp corners, cracks or crevices and the machine from top to bottom, inside and out, is sanitary as a dinner plate.

BALL BEARING---WONDER GEARS

None Better in Highest Priced Separator Made

Practical, Efficient Ball Bearing

Main Upper Spindle Ball Bearing.
Covered on Top, Oiled From Below.

Ball bearing construction has been adapted to the New Masterpiece in a **very practical manner**. Hundreds of tests were made with ball bearings fitted in every place where a ball bearing could possibly be used—wherever these tests showed that ball bearings would add anything to the **efficiency, ease of turning or life of the separator**, you will find one on this New Masterpiece Model.

The main point, of course, is the upper spindle bearing because that is the point of highest speed and greatest load. At this place we use a specially designed bearing which is fitted on a bronze collar on the spindle. The bearing is a slip fit and can be quickly taken off and replaced with a new bearing if occasion requires.

Don't get the idea that the separator with the largest number of ball bearings in it is the best machine—the ball bearing is a delicate mechanism—it must be absolutely accurate and carefully protected from water and milk and constantly oiled or it is worse than nothing. We pay a premium on every ball bearing we use in order to get the best and most accurate bearing there is on the market. The ball bearing in the New Masterpiece is **completely covered and protected** from the top so that no water, milk or foreign matter can get into it—from below there is a constant spray of oil on it from the time the machine starts until it stops. Ball bearing construction has been practically adapted to the New Masterpiece so as to give **best service, easiest turning and the least trouble possible**.

Smooth, Quiet-Running Gears

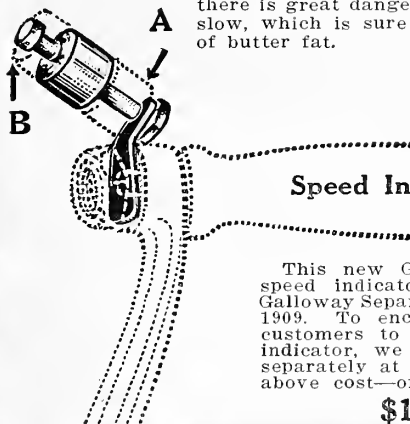

No cream separator on the market has a more simple or more efficient set of gears than the New Improved Masterpiece Model. The big master gear on the outer end of the main crank shaft meshes with the small pinion gear which turns the solid bronze composition worm gear. This new improved specially designed worm gear, of a special composition material, fits into the spiral threads on the spindle **so that the three gears are all there is to it**. These three gears are every one helical cut on the latest type of automatic machinery and **their special design offsets all side thrust and eliminates friction as far as is possible so that they mesh smoothly together and run as quietly as the sound of flowing water**.

The simple construction of these gears insures lifetime operation with little if any repair cost or gear trouble. The **entire gear system is supported by one complete casting** called the gear case so that it is impossible for the shafts to get out of alignment. The constant spray of oil which plays upon the complete gearing system furnishes ample lubrication which reduces wear to the minimum and helps **to make the New Masterpiece Model an easy turning, quiet, smooth running separator**.

New Speed Indicator

The picture below shows the new speed indicator which comes as regular equipment on every Galloway Masterpiece Separator. It is a simple but reliable device for indicating or measuring the speed at which you are turning the crank and is attached to the end of the crank handle. When you start turning the crank, the little sliding weight slips back and forth on the rod from A to B. If you turn too slow this weight slides down to arrow A. If you turn too fast it flies out to arrow B. When it finds a middle position on the rod and stays there, as shown in the picture, you are turning just right—50 revolutions per minute. **This speed indicator is reliable, is easily seen and will last a lifetime.**

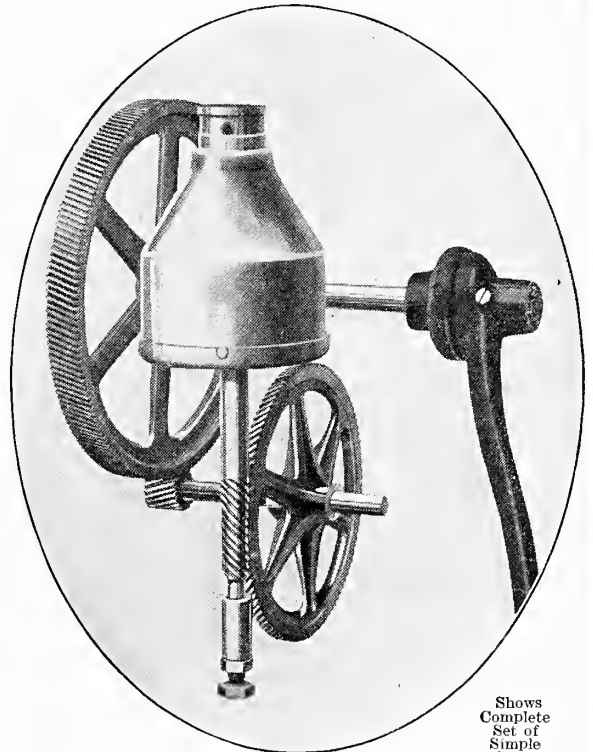

You are not apt to turn too fast but there is great danger of turning too slow, which is sure to mean a loss of butter fat.

Speed Indicator

This new Galloway design speed indicator will fit any Galloway Separator made since 1909. To encourage our old customers to buy this speed indicator, we are offering it separately at a price slightly above cost—only

\$1.00

Shows Complete Set of Simple Gears

New Style Clutch

The new clutch on the Masterpiece Separator is very simple—but it works. It has an absolutely positive catch. It is composed of three parts: the case which is a strong casting; the dog, which is forged steel, and the driver which is cold rolled steel. The notch in the clutch dog is **absolutely sure to catch in one of the three notches in the case—as shown in the picture**. It can be used with power pulley the same as by hand.

Complete Set Accessories Sent with Every Separator

Every Galloway Separator has a complete set of accessories included free. This set of accessories includes brushes for cleaning the spouts and tinware, screw driver, wrench, oil can, a quart of the very best cream separator oil and also an extra rubber ring. They are packed right in the box when you get your new separator.

No. 10 MASTERPIECE

CAPACITY—750 LBS. PER HOUR

THE skimming capacity of the No. 10 Masterpiece is 750 pounds per hour which is equal to one and one-half gallons per minute. This No. 10 skims one-half faster than the No. 8 and is the most popular size of all. It is really the most value for the money because its increased capacity not only saves a lot of time each night and morning but there is also less wear on it because it is used a shorter time each day. It is guaranteed to stand up well under heavy duty use year after year. It is well suited for the farm or dairy with 7 to 11 cows. Completely equipped and has every New Masterpiece feature. The small amount of extra cost for the No. 10 size will soon be saved in time and labor and it fits the needs of the average farm today better than any other separator we know of.

A New Masterpiece means more cash from your cream crop—and it means the biggest cash return from your livestock, too.

Shipping weight is about 200 pounds and we can send it to Cherokee, Iowa, for 85 cents or to Grand Forks, North Dakota, for \$2.06 or to Pittsburgh, Pa., for \$1.66.

No. 12

MASTERPIECE

CAPACITY—950 LBS. PER HOUR

THIS is the largest size made in the New Masterpiece Model—in fact, it is the largest size cream separator that is practical for hand turning operation. Its big capacity will skim two gallons per minute perfectly which is 950 pounds per hour. This is about one-third faster than the No. 10. Special ball bearing construction and other features make it turn easier than many other separators of smaller size. It is the fastest, cleanest skimming separator we know of and will quickly handle the milk supply from a herd of from 10 to 20 cows. It saves time, makes less work of turning, has less wear on the machine and has been approved of by dairymen in all parts of the country. Comes all complete and has all the latest New Masterpiece features.

Use a New Masterpiece to get bigger cream checks—and to get the biggest cash return you ever got from the chickens, pigs and livestock.

Shipping weight 200 pounds, and it can be sent to Jefferson City, Mo., 438 miles, for \$1.28, or to North Platte, Neb., 512 miles, for \$1.99.

POWER-DRIVEN Separators

THE ELECTRIC MODEL

THE ELECTRIC MOTOR is the ideal power for operating a cream separator. First, because it supplies an even and steady pull which does not injure the machine and reduces the wear and tear to the minimum. Second, because it saves your "armstrong power" as well as your time. These few minutes saved every night and morning may mean another round plowed, another acre sowed or a few minutes of needed rest while the MOTOR DRIVE DOES THE WORK. A Motor Attachment added to any Galloway Masterpiece Separator will pay for itself many times each year, not only in additional enjoyment but in actual time saved.

Equipped with Westinghouse Motor

We furnish WESTINGHOUSE MOTORS with all complete motor driven outfits. The attachments are built into the machine in such a way that it is operated by the motor which sets on a shelf but which does not interfere with the use of the crank for hand separating if you wish.

You Can Equip Your Own Galloway

If you already own a Galloway Separator you can buy the electric attachments either with or without the motor and easily build them into your own machine. We sell a large number of motor-drive attachments each year to old customers who did not have electric power on their farms when they bought their separator. You can buy the set of attachments separately and use your own motor or you can buy the attachments with the motor at prices shown here.

If you buy a motor-drive separator complete be sure to give us complete description of your electric current. If you have a motor now and order the separator with attachments be sure to give the speed at which your motor runs and the diameter of the pulley on the motor shaft. If the pulley on the motor shaft requires a flat belt, tell us the width of the belt. If it requires a round belt, give us the diameter of your belt.

NOTICE—The pulley on the Galloway Separator pinion shaft is equipped with a ratchet so that if the power is shut off while you are separating, the machine will run down naturally or you can take hold of the crank and finish the separating by hand.

COMPLETE ENGINE-POWER OUTFIT

This Outfit Works Like a Top

This complete engine power outfit shown below is offered to you in any of our four sizes of Cream Separators at no more money than others ask for the same capacity Cream Separator Alone. This outfit works like a top. The little power stand serves as a "go-between" and our patented pick-up-speed pulley applies the power from the engine just as evenly and steadily as you could do by hand or with an electric motor. The power stand with the two belt connections breaks up all vibration from the engine and the separator is brought up to the proper speed gradually from a standing start. Our years of experience in building both engines and separators have proved this to be the most economical, the most satisfactory and the most serviceable from the standpoint of long life of any engine power separator outfit we have ever made or seen. Satisfaction guaranteed or your money back.

20 ft. Rubber Belt FREE
With This
Combination Outfit

Low Priced Handy Outfit

Don't overlook the fact that this outfit is handy, that the engine can be used for many other jobs, that the power stand is available for use as a line shaft and that the complete outfit, separator and all, can be purchased for no more money than you would have to pay for a cream separator alone from any dealer or agent. Power stand can be belted to the ceiling, or side wall or floor and the Handy Andy Engine can be used to operate many other things such as washing machine, small wood saw, pump, etc. This outfit comes complete, including whatever size separator you need, special pick-up-speed pulley, 20 feet of rubber belt, power stand and the 1 1/4 H.P. Handy Andy Engine, as shown. Individual pieces can be purchased separately as priced below if you have your own separator.

Crank Furnished

The regular hand crank is furnished with each complete power outfit and you can take the pick-up-speed pulley off of the crankshaft and put the crank on it in a couple of minutes' time, thus making it possible to either finish or do your separating by "armstrong" power if you wish or if necessity requires.

Here Is the **WHOLE STORY**

Of the **NEW Ball Bearing MASTERPIECE**

Told by Our Customers After Trying Our Separator Under Every Known Condition
How Does It Skim?

P. C. CRAFT, EAGLE ROCK, VA., SAYS—

"I will gladly show anybody my new cream separator and speak a good word for it. I like the New Masterpiece Model fine as it gets every bit of the cream."

WALTER ARNOLD, LONGTON, KANSAS, SAYS—

"Our cream has tested almost ten points higher than it ever did with our old separator. Have an average test of 48 or 50; that is extra good."

DAVID W. ULREY, WESTON, OREGON, SAYS—

"Our New Masterpiece Separator skims the milk fine. Doesn't leave a trace of cream that we can find."

MRS. C. V. BUXTON, BEMENT, ILLINOIS, SAYS—

"The No. 8 Masterpiece skims wonderful, placed beside a new * * * It took 2.5% of butter fat out of the * * * skim milk. The * * * only got 1% of the Galloway's skim milk."

FOSTER KEPFORD, ARION, IOWA, SAYS—

"My New Masterpiece Separator turns easy, skims close and fast and I think it is rightfully named."

H. A. VAN CLERF, FERGUS FALLS, MINN., SAYS—

"My Masterpiece Separator is going to talk for himself. I gave him a real test and he works just fine. At the very start of Mr. Masterpiece, I gained 10 points on my cream test and \$15 on my check."

How Is It for First Cost?

DUNCAN P. GRANT, CHUGWATER, WYOMING, SAYS—

"We like the New Masterpiece Separator fine and think it is just as good as the separators they sell here for \$115.00 to \$125.00."

C. G. WENING, MALLARD, IOWA, SAYS—

"I am certainly more than pleased with my New Masterpiece Ball Bearing Separator. I know I saved \$40 when I bought it. I have just as good a machine as anybody can get at any price."

ALEX BARNETT, REXFORD, KANSAS, SAYS—

"I sure think the Galloway New Masterpiece Model Separator is great. It gives me very good service and I saved \$60.00 compared to what they were asking me for a machine here."

ARNOLD KIBBLER, MISSION, SOUTH DAKOTA, SAYS—

"I like my New Masterpiece Cream Separator just fine. I think it is as good a machine as you can get anywhere regardless of price. Glad to send you the name of my neighbor who is interested because I have told him how well I like my new separator."

OSCAR MILLER, HAMLIN, IOWA, SAYS—

"I liked my New Masterpiece so well I did not think it worth while to keep the old separator, which I am trading in on the new one, any longer. I think it is equal to any \$100.00 separator made."

EDW. KAUTZ, HERRICK, SOUTH DAKOTA, SAYS—

"I am sending you the names of three persons who have seen my separator and like it so well they want to get one too. It will stand up with any separator that costs \$115.00."

How Is It for Upkeep?

F. C. BARKOWSKI, AUDUBON, IA., SAYS—

"Have had one of your Galloway Separators for 10 years and it is as good as can be—runs every day. Haven't spent 5 cents on it for repairs."

JOSEPH MOONEY, GREENBUSH, MINN., SAYS—

"In 1916 I purchased from you a Galloway Sanitary Cream Separator No. 7 and up to this time I have not spent a single cent for repairs."

WM. H. WILHELM, FREELAND, MARYLAND, SAYS—

"Have had my Galloway Separator eight years—used it twice every day and this is the first thing it cost me except the oil. It runs as smooth today as it did the first day I got it."

LAWRENCE H. FULSAAS, PETERSBURG, NEBRASKA, SAYS—

"Our Galloway Cream Separator has given us good service. Have used it nearly nine years and no expense except for rubber rings. I think this is pretty good."

How Is It for Easy Running?

W. M. FORD, KIMBOLTON, OHIO, SAYS—

"We like our New Masterpiece fine. It runs easier than any other separator we ever had or saw. It skims very clean and gives us an accurate test all the time."

CHAS. A. HURD, TROY, MONTANA, SAYS—

"I am more than pleased with my New Masterpiece Ball Bearing Cream Separator. It is the easiest running machine that we have ever seen or used. Am recommending it to two of my neighbors, whose names I am sending."

H. E. PACE, MELROSE, NEW MEXICO, SAYS—

"We are very proud of our New Masterpiece Cream Separator. It has proven to be all you claim for it. It is sure light running and a perfect machine."

GEO. DUNHAM, WHITE CLOUD, MICHIGAN, SAYS—

"I am well satisfied with the New Masterpiece No. 10. I have used different kinds of separators and for easy turning and close skimming it has them all beat."

CLARENCE DAWSON, BELLE PLAINE, IOWA, SAYS—

"We received the New Masterpiece Separator and wish to say that the machine is everything you say about it. When it comes to close skimming, silent running and easy turning, it has no competitor, and that small, simple indicator is what I call a real one."

How Does It Stand Wear?

MRS. N. C. JOBE, SISTERSVILLE, WEST VIRGINIA, SAYS—

"We have used our New Galloway Masterpiece Ball Bearing Separator a long time now and are very well pleased with it. This separator is as good as any \$100 machine you could find any place. I am sending the names of some of my friends who are interested in my separator and I believe you can sell them one."

CHARLEY SCHMIT, VINTON, IOWA, SAYS—

"I have had my New Masterpiece Cream Separator a long time now and have given it a good trial and I sure like it fine. It turns very easy. We have no trouble at all with it and can recommend it to anyone."

FRANK BUESSING, PHILIP, SOUTH DAKOTA, SAYS—

"I like my New Masterpiece Cream Separator just fine. It has always been ready to go with no trouble or delay. There is absolutely no cream wasted with it and I think it is the closest skimming and easiest turning machine I ever used."

ARTHUR KEHR, HAVRE, MONTANA, SAYS—

"We have a Galloway Separator which is 16 years old. We have never bought a single repair and we think our separator is a fine piece of machinery yet."

MRS. AMELIA C. ROBINSON, NABBS, INDIANA, SAYS—

"I have used my Galloway Separator 15 years, have run thousands of gallons of milk through it but it is just as good now as it was when I bought it."

Is It Sanitary, Easy to Clean?

ROB. F. LANHAM, WEST GROVE, IOWA, SAYS—

"We like our New Masterpiece Cream Separator just fine and you can tell anybody that we are well pleased with it. We looked at several higher priced machines before we bought the Galloway Masterpiece and we could not have made a better choice because it turns so easy and is so easy to clean. I am sending you the names of some of my neighbors who have seen our separator and like it fine. Some of them have used it and say it runs easier than any of their high priced machines. There has never been a bit of cream raised on our milk."

W. H. PLOEGER, CHARLES CITY, IOWA, SAYS—

"I don't see how your New Galloway Masterpiece Ball Bearing could be improved upon. It is so handy to wash and takes out the last drop of cream."

RUSSELL NORRIS, TRAVERSE CITY, MICHIGAN, SAYS—

"Your separator is easy to put together and easy to wash and to keep clean in every way."

You Can Safely Be Guided by the Experience of These Users Who Inquired, Ordered on Trial, Bought, and Are Satisfied

Just a Few Words About Sending Your Separator Order

What Is the Best Size to Buy?

Be careful not to buy too small a size. Ninety-nine out of every hundred farmers who buy a second separator insist upon getting a larger size than they had at first—even if they are milking the same number of cows. There must be some good reason for that. One reason is that they can buy our No. 10, or 750 lb. size, or even the No. 12 which is the 950 lb. size, for less than the small size of other makes cost them.

But the big reason is because they want to save time each night and morning—when time is really worth the most to them. A few minutes saved twice a day amounts to something in a year. Our No. 10 or 750 lb. size will skim as much milk in eight minutes as the No. 8 or 500 lb. size will skim in twelve minutes—just 50 per cent faster. If, for instance, you get twelve gallons of milk

at a milking you can do your separating with the No. 10 in eight minutes and with the No. 8 in twelve minutes. This saving of eight minutes per day for a year amounts to forty-eight hours—and the difference in price is only \$9.00. Wouldn't you rather put \$9.00 more into your separator when you get it and save forty-eight hours turning every year?

Then, too, the larger size will last longer because there is a shorter time of use each day—less turning, which means less wear on the machine, so the extra number of years which the larger size will give you will also more than pay for a few extra dollars put into the cost of the machine when you order.

Take a man's advice and buy a separator that's large enough to take care of a growing herd.

Try the Galloway Separator 90 Days!

The "proof of the pudding" is in the "eating."

The proof of the separator is in the trying. We put it up to your own judgment. We will ship you any size Masterpiece at any of our four selling plans and give you 90 days from the day it arrives at your station to test it out in your own way, on your own farm, under exactly the same conditions as it will work if you decide to keep it. That means a trial of 180 milkings—one-fourth of a year.

If You're in a Hurry Telegraph the Order

We always try to ship promptly—in most cases the same day the order reaches us. If you are in a big rush, however, have your banker wire us that he is sending your money and tell us what size to ship, where and who to ship it to and we will send the separator right out by express without waiting for your order to reach us.

EASY TO UNPACK Every separator comes almost completely assembled, packed in a box, plainly marked so you can see which side to open. The separator is easily taken out and the remaining parts put on. Simple, complete instruction book comes with every machine. You will not have the least bit of trouble in unpacking or getting the separator ready to use.

Our 4 Liberal Selling Plans—Buy on the One That Suits You Best

PLAN NO. 1—CASH WITH ORDER. The cheapest and best for you and for us because it eliminates bookkeeping and gives you the lowest possible price.

PLAN NO. 2—BANK DEPOSIT. You deposit the money with your own local banker and have him fill out and sign deposit slip "A" on the back of the order blank. He keeps the money while you are trying the separator. If you keep the separator he sends the money to us and if you send the separator back he returns the money to you.

PLAN NO. 3—NOTE SETTLEMENT. We will gladly take your note for 3, 6, 9 or 12 months' time at only 6 per cent interest. You can pay any part in cash and give your note for the balance or you can give the

Just a Word About the Low Freight Cost

We always ship separators by freight unless the customer is in a hurry and requests us to ship by express. The shipping weight on all sizes is approximately the same—about 200 lbs. The freight on separators is very low and the average freight cost on our shipments is less than \$1.00 each. Cream separators are sold f. o. b. our nearest warehouse point to you. If you want to know exact amount of freight to your station, we will gladly tell you upon request—or quote you a price laid down at your station.

REPAIRS You will not need many repairs—but if you ever do need any you can get them quickly. We keep repair orders preference. We keep a complete stock of separator repair parts in our main office. Practically every order goes out by mail within a few minutes after it is received.

LIFETIME GUARANTEE

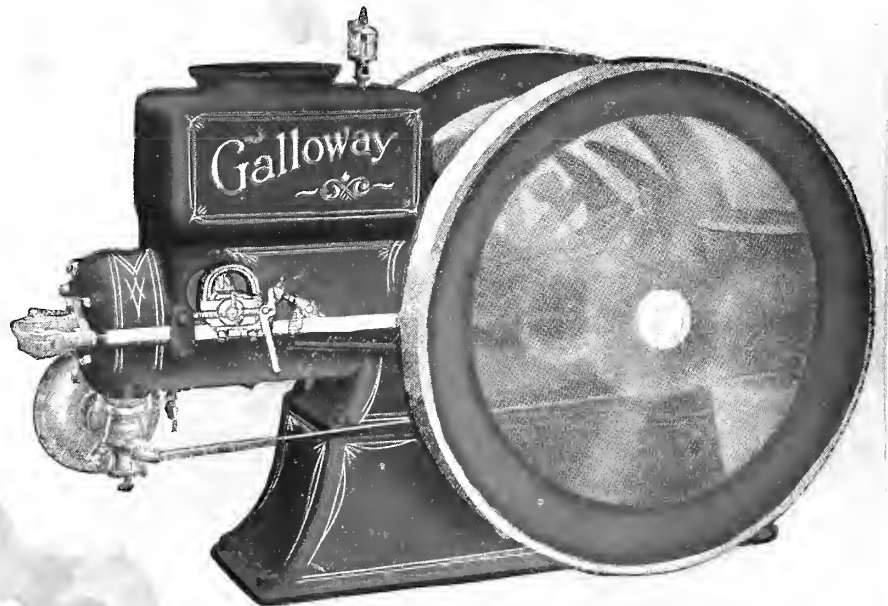

Every New Masterpiece Cream Separator is guaranteed for the lifetime of the machine in writing—against any defect in material or workmanship. This means we will replace at our factories free of charge any part that breaks as long as you use the machine—if it is our fault. You are entitled to this kind of a guarantee in writing when you buy a new separator—and you should see that you get it.

Proof of Service

"We are so pleased with our 7-H.P. Galloway Engine that we are ordering another one. We want a 12-H.P. as we are going to put up a silo and want lots of power."—Anton Sipler, Leymore, Wisconsin.

—:—

"My 7-H.P. Galloway Engine which I purchased recently is a dandy. You may be sure that I like my old Galloway, or I would not be buying another one. Later on I may buy still another. A Galloway Engine is the cheapest and most convenient power a man can have on his farm."—A. V. Howe, Sanford, New York.

—:—

"I have had my 2 1/4-H.P. Engine for a long time and I am proud to say that the Galloway Engine can't be beat for service and long wear. My engine still runs fine and develops good power. Put me down as a booster for Galloway goods and I don't mean 'maybe'."—C. D. Overman, Couderay, Wisconsin.

—:—

"Five years ago we purchased one of your Masterpiece 7-H.P. Galloway Engines and it is sure a dandy. It was the first thing in the Galloway line in this part of the country and has been the means of selling several other engines here. It also helped to introduce your line and sold four cream separators, and recently one of our neighbors bought one of your manure spreaders."—Fox Brothers, Foulmore, New York.

—:—

"My Galloway Engine has not given one minute of trouble. Starts right off and runs fine. Nothing compares with my Galloway for power, efficiency and all-around good service."—S. D. Squier, Cleveland, Texas.

—:—

"My small boy runs our Galloway Engine, operating a grist mill. Engine is giving perfect satisfaction."—W. C. Kihul, Enid, Mississippi.

Like the Mighty Niagara—The Galloway Engine Is a Source of Economical Service—Steady Service—Lasting Service—Through Many Years.

Ten years from today you will either be greatly pleased—or very sorry—because of the choice of engines you make when you buy one. You want an engine that is easy to start, that will run steadily as long as you want it to, that gives you economical service and then you want that engine to last a good long time. That's just the kind of an engine you get in the Galloway.

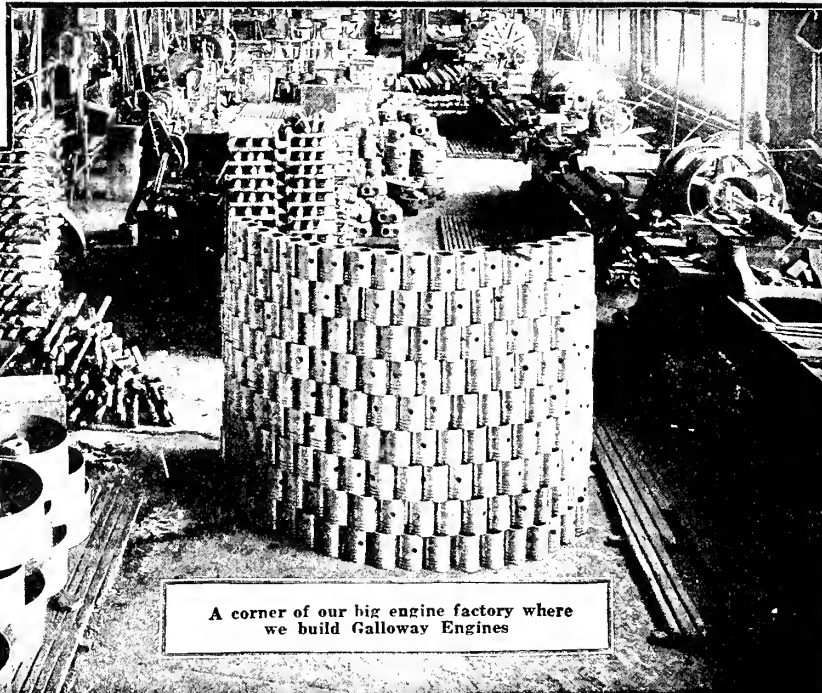

In addition to the engine itself and the service which it gives you, remember that when you deal direct with an old established firm of reliable manufacturers, the service which you can expect and get from the makers of your engine will be far ahead of the service you might need from any agent or dealer who perhaps cannot be located or may be out of business in five, ten or fifteen years from today.

From a service standpoint, the Galloway Engine has been designed and perfected to operate at low fuel cost, to withstand wear and hard usage which greatly reduces repair cost—its construction is so practical, so simple and yet so sturdy that it is always ready to go, in any kind of weather, to run days at a time without over-heating and to give you continual service which does away with expensive delays and frequent break-downs. The service of the Galloway engine saves you time, saves you a lot of trouble and saves you money on first cost and operating expense.

20 Years of Engine Building

The Galloway Company is one of the first old, original engine manufacturers, still in business today and still supplying parts for engines we manufactured over 18 years ago. Twenty years of engine building experience—there are grown men using Galloway Engines on farms today who remember the Galloway Engines their fathers had when they were lads at home. Almost every day we get an order from one of these "grown-up lads" whose father had a Galloway Engine on the old farm. This is pretty good proof of satisfactory service that the old engine has given ever since the boy can remember.

The Galloway Company passed the experimental stage of engine building years ago. We have refined and perfected the Galloway engine design and mechanism until the name "Galloway" on an engine is just as standard and just as dependable as years of experience can make it. When you order a Galloway Engine you can feel perfectly safe in getting a standard, nationally known, reliable product—you can be assured you will not need any repairs for a long time to come, but if you ever do need any, in 5 years or 10 years or 15 years, you will be safe in getting direct, prompt service from the manufacturer, which service you will appreciate and value highly when that time comes.

A corner of our big engine factory where we build Galloway Engines

POWER!!

Economical—Sure—Plenty of It

Like the Mighty Niagara—The Galloway Engine Is a Source of Economical Power—Sure Power—and Plenty of It for Any Job.

When you buy an engine you expect it to do the job you have for it. You want that engine to have power—and plenty of it. There is nothing more exasperating than to have too small a size, or too light an engine to do your work—so that it keeps breaking down or sputtering and dying on the job.

Galloway Engines are guaranteed to develop their full rated horse power at slower speed than most any other engine of the same rating made. You can, of course, speed them up a little faster and get excess power. You can slow them down and the automatic fuel regulator with which they are equipped reduces the fuel consumption according to the load you are pulling. If you order the proper size Galloway Engine at the start, you will never be wasting any time tinkering with it or trying to keep it on the job. They are built to stand hard usage, to run constantly, to carry an overload in emergencies and to do it without breaking down or causing trouble.

Power and plenty of it! That's what is built into every Galloway Engine. The large bore, the long stroke, the excess weight of good grey iron out in the rims of the flywheels, the ample cooling system all combine to give power and plenty of it with ease and without over-straining.

Built for Lifetime Service

Through the years the Galloway Factories have increased and now engines are made on the latest type of automatic machinery by the most improved methods. Every part, whether it is piston, connecting rod, cylinder, crank shaft or bearings, is perfectly and accurately machined. Only absolutely the best grade of new material is used. When we make a thousand pieces of any certain part, they are all identical—exactly alike and will fit any engine.

Every Galloway must pass a three-way test. First, on the test block as in the picture below. It must run without overheating, it must pull without hesitation and; Second, it must pass the rigid inspection of our factory engineer before it goes to the shipping room.

Third, the engine must stand trial on your farm. The user is the final judge and jury. Every engine we have ever sold has been put out under our 30-day trial offer and the thousands in use on American farms today have all passed this three-way test. If you want power—and plenty of it—buy a Galloway.

Proof of Power

"The Galloway Engine which I bought almost ten years ago has never refused to work and I think it has more power than when it was new. If I were to buy 50 engines, they would all be Galloways."—Elmer N. Clark, Brooklyn, Michigan.

—:—

"I like my little Handy Andy Engine fine. She sure is a powerful little engine. Will put it up against any engine of its size, not saying anything about the price."—Ray Baughman, Red Lake Falls, Minnesota.

—:—

"The engine that I got from you some years ago still works fine. Has plenty of power and pulls my 30-inch saw like a top. I have offered my complete machine to any man who could beat it."—J. R. Swise, Oakville, Iowa.

—:—

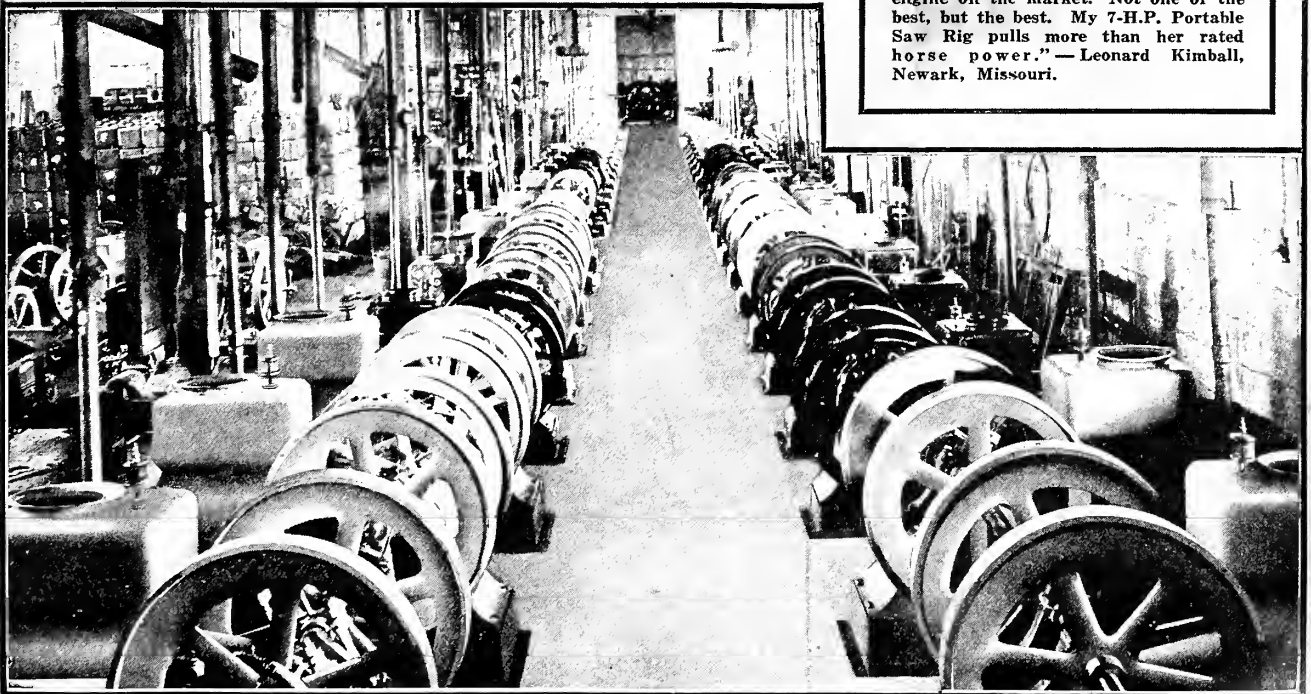

"My 5-H.P. Galloway Engine that I got in 1914 is running fine—it is easy to start in cold weather and gives more power than any 7-H.P. that I have hooked my blower to."—John T. Hicks, Centralia, Ontario, Canada.

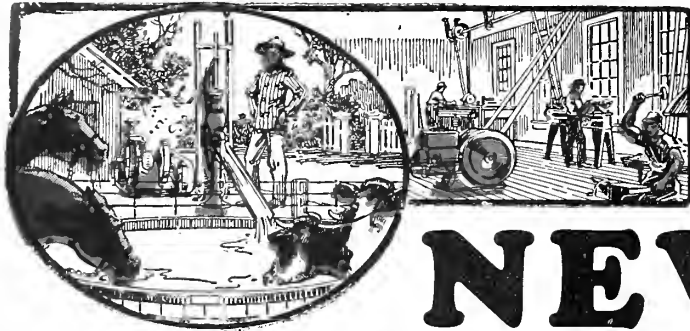

—:—

"My 5-H.P. Galloway Wonder Engine that I bought of you is certainly just as good as any. It is a powerful engine and I think I saved quite a bit of money when I bought it."—Herman Starman, Elgin, Nebraska.

—:—

"The Galloway Engine is the best engine on the market. Not one of the best, but the best. My 7-H.P. Portable Saw Rig pulls more than her rated horse power."—Leonard Kimball, Newark, Missouri.

Engine Section

NEW!! "Handy Andy" It's a Dandy

The World's Lowest-Priced 1 1/4 H. P. Gas Engine

The increased demand for a small, light, inexpensive but reliable engine caused us to develop and offer to our customers our new "Handy Andy"—1 1/4 H. P. size. This little engine was first offered by us less than a year ago. Our customers welcomed it with enthusiasm—the orders on it were tremendous; in fact, we could not produce engines fast enough to keep up with the demand.

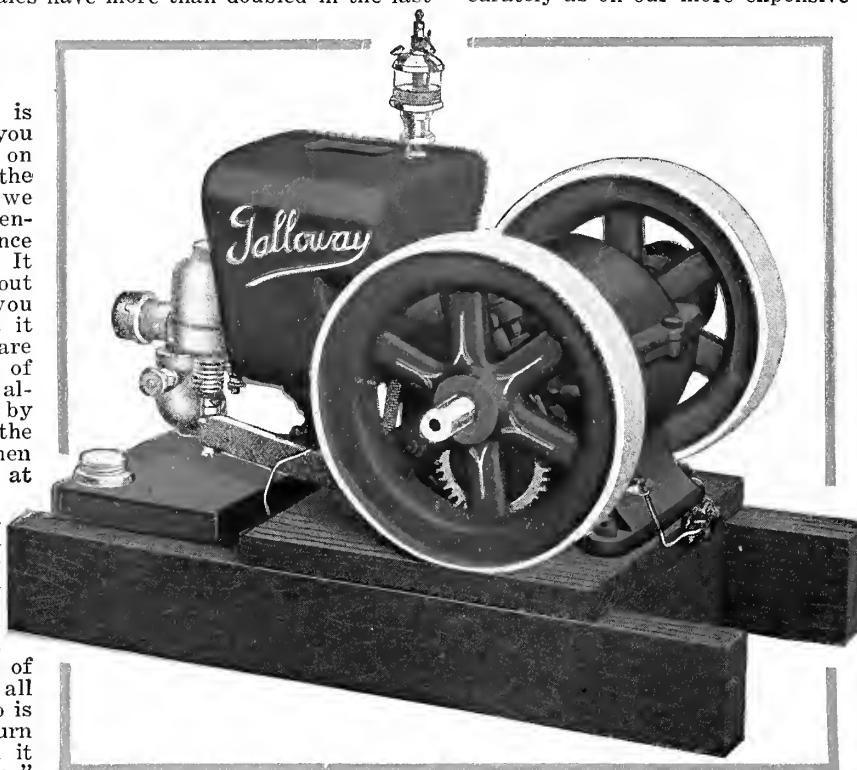

It's new!—but it has been tried long enough to show that it "fills the bill"—that it's just what thousands of farmers want. Our engine sales have more than doubled in the last

few months and this little "Handy Andy" has helped to do it. Every purchaser is a booster.

Every bit of the Galloway experience in engine building has been built into this new power unit—it is a standard Galloway product—Galloway made—Galloway guaranteed—and last but not least sold at Galloways' usual low price. It is not a toy or a cheap piece of machinery in any respect. It is quality made throughout—we have used nothing but the very best of material and every part is machined as accurately as on our more expensive engines.

Any Woman Can Run It

This little engine is easy to start—all you have to do is to turn on the switch, take the small crank which we furnish with every engine, turn it over once and "off she goes." It will run all day without any attention—all you have to do is start it and then it takes care of itself. Hundreds of these engines are already being operated by the "woman of the house" and, the women say, with no trouble at all; just as good as an electric motor. The battery ignition makes it easy starting and the splash system of the covered crank case, together with the sight feed oiler takes care of the lubrication so all any woman has to do is to put in some gas, turn on the switch, turn it over and "let her run."

Every Owner Likes It Fine

"In regard to your 1 1/4 H. P. Engine, I certainly am well pleased with it. Would not take twice the cost of it if I could not get another."

James R. Rice,

R. 1, Springbrook, Wis.

"My 1 1/4 H. P. Handy Andy works fine. Everybody that comes along is surprised at the work it can do."

S. D. Wyse, Burns, Mont.

"I am well satisfied with my Handy Andy 1 1/4 H. P. Engine. I am running one of your power washing machines and a No. 9 Galloway Cream Separator and the engine handles both of them fine. I have also used it on my 92 ft. well and it handles the pump fine. It sure starts easy and runs perfectly."

Wm. Sander,

R. 7, Sleepy Eye, Minn.

"I have used the Handy Andy 1 1/4 H. P. Engine and I like it fine. Have used it for cleaning grain and pumping water and it does both jobs fine. It sure has lots of power for the size and I believe it will develop over 1 1/4 H. P."

Ralph H. Dwelle,
Kensal, N. D.

Where Can You Duplicate this Engine for

\$34.90

A Standard Galloway Product

This little engine is a regular "Handy Andy" just as its name implies. It is sturdy enough and plenty big enough to do a lot of light jobs around your place. Many of these jobs you have probably been doing by hand or else using an engine that is a lot bigger than is necessary. This little engine is water cooled and will run about 25 hours pulling its ordinary load on a single gallon of gasoline. We guarantee it to develop its full 1 1/4 H. P. rating when run at 550 r. p. m. but, of course, it cannot be expected to do the work of a 3 H. P. or a 5 H. P. engine. It will live up to the Galloway reputation and it will do more than you could reasonably expect of it.

Its low cost of operation will save its price almost every month you use it besides saving you the time and labor of performing the everyday, tiresome, irksome jobs that are wearing you out. One of these little engines will take the worry off your mind and the work off your back for a few cents a day.

Handles a Lot of Light Jobs

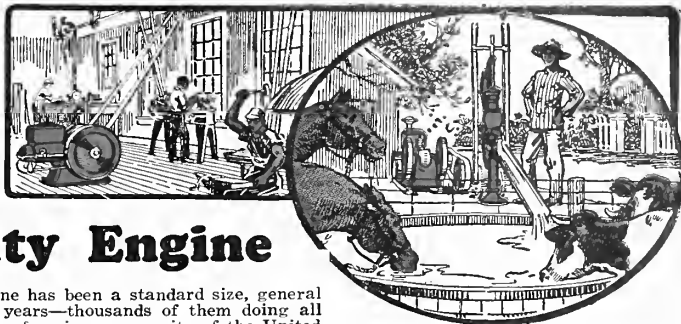

This engine was specially designed and built for the purpose of running a washing machine, cream separator, shallow well pump, a grindstone, a small grinder, milking machine, farm mixer, etc. It is guaranteed to operate any single or double tub washing machine, run any cream separator with power to spare.

SPECIFICATIONS—Battery equipped. Covered crank shaft to prevent oil splashing. Sight feed oiler. Water cooled. Bore 3 1/2 in., stroke 3 in. Hit-and-miss governor, four cycle, furnishes full 1 1/4 H. P. at 550 r. p. m. All-over dimensions 19x22 in. Shipping weight 140 lbs. F. O. B. Waterloo.

2 1/4

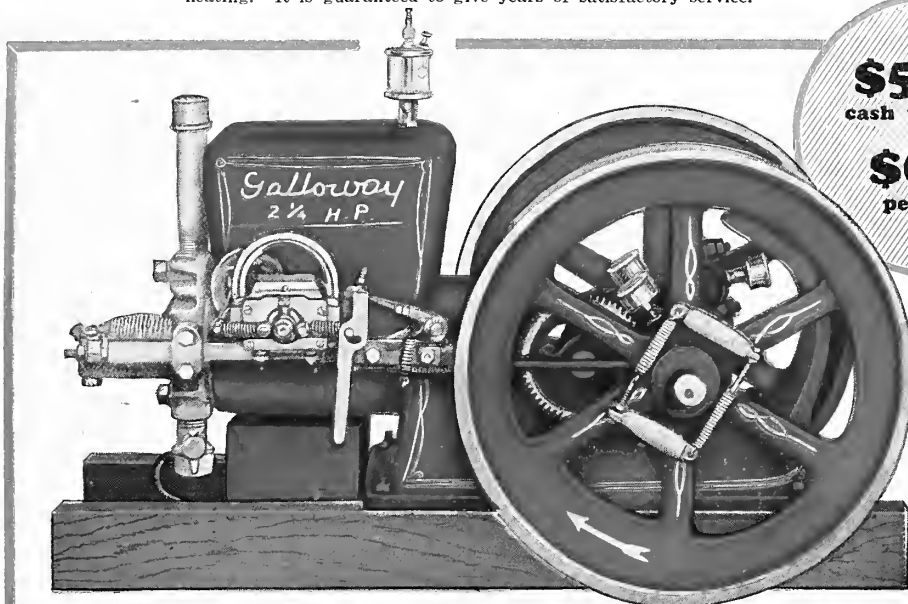

H. P. Utility Engine

This Galloway 2 1/4 H. P. Engine has been a standard size, general utility farm engine for twenty years—thousands of them doing all kinds of work in practically every farming community of the United States. It is easy to start in any kind of weather, requires very little attention and is very economical to use. It is water cooled but the head is our special design and air cooled so it warms up to a certain point quickly, furnishes just enough heat to vaporize the gas and insures perfect combustion. It is equipped with an automatic fuel regulator which regulates the amount of gasoline used according to the load the engine is pulling.

This 2 1/4 H. P. Engine has a solid cast one-piece base, cylinder and water pot—impossible for the cylinder to ever get out of alignment. Has extra long connecting rod and the long throw of the crank shaft delivers full power which is kept even at all times by the extra weight out in the rims of the fly wheels. It will run all day without overheating. It is guaranteed to give years of satisfactory service.

General Farm Use

There is an abundance of real service in this 2 1/4 H. P. Engine—as much for the money invested as any other labor-saving machine you can put on your farm. Only costs a few cents a day to operate and it will handle any washing machine, cream separator, milk ing machine, ordinary pump jack, water system, tool grinder, two-hole shell er, sprayer, small grinder, cement mixer and other machinery requiring up to 2 1/2 horsepower. All you have to do is to keep oil in the oil cup, put a little gas in the gas tank and "let her run."

"My Galloway 2 1/4 H. P. Engine has pumped water almost every day now for about 10 years and it runs as good as ever."—W. W. Cornelius, Blue Springs, Mississippi.

"I have had my 2 1/4 H. P. Engine 15 years and it is still doing fine. I think it is a little wonder. It will out-pull anything its size around here."—Miller Gray, Oxford, Pennsylvania.

"My Galloway 2 1/4 H. P. Engine has been used almost every day for seven years. It pumps water for 20 head of cattle, runs my feed cutter and also runs vacuum pump for milker. Gives perfect satisfaction, has never once refused to run and I think it's the best engine on the market for low cost of upkeep and operation."—Daniel Drescher, Neillsville, Wisconsin.

"My 2 1/4 H. P. Engine was purchased in 1912. Has been used for cutting wood and other work and always starts the first time you turn the handle."—H. B. Gee, Keysville, Va.

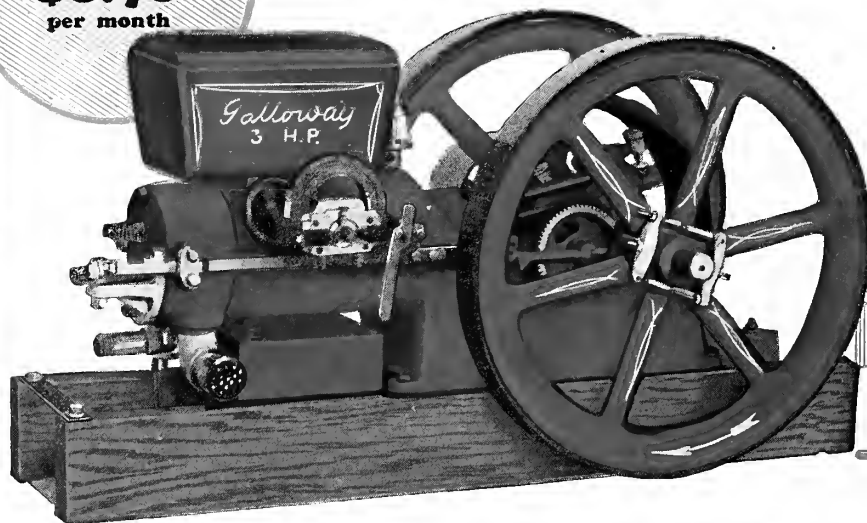

ADOLPH BURYANEK OF WESTFIELD, IOWA, SAYS—

"You have a good name for your 3-H.P. Engine—the Bull Dog. It takes hold just like a bull dog does. I run my 44-ft. well pump, a 6-in. burr grinder and my washing machine all at the same time with this 3-H.P. engine."

Many other people are using the 3-H.P. size to advantage on their farms. It costs no more to operate when pulling a 2-H.P. load than the average 2-H.P. engine costs because the fuel consumption is automatically regulated. A few dollars added to the price of the ordinary small engine will buy this 3-H.P. Bull Dog.

"Have used my 3-H.P. Engine over 6 years and it has given excellent service all the time."—Edward Hermanson, Yankton, South Dakota.

"My 3-H.P. Engine always starts easily and I believe it has 2 horse more power than any other engine of its size. I use it every day to grind feed, saw wood or pump water. It is handy for anything you want to run with it."—Frank Plumer, Vesper, Wisconsin.

"I have used my 3-H.P. Bull Dog Engine over 6 years now and never bought 2c worth of repairs for it yet. It runs as good as ever and I think it is the best buy you can make for the money."—Chas. A. Boettcher, Raymond, Minnesota.

Engine Section

Galloways'

The all purpose Wonder 5 H. P. Engine is a dependable and reliable power plant to have on any farm or for other work requiring more power than the ordinary light weight general utility engine furnishes.

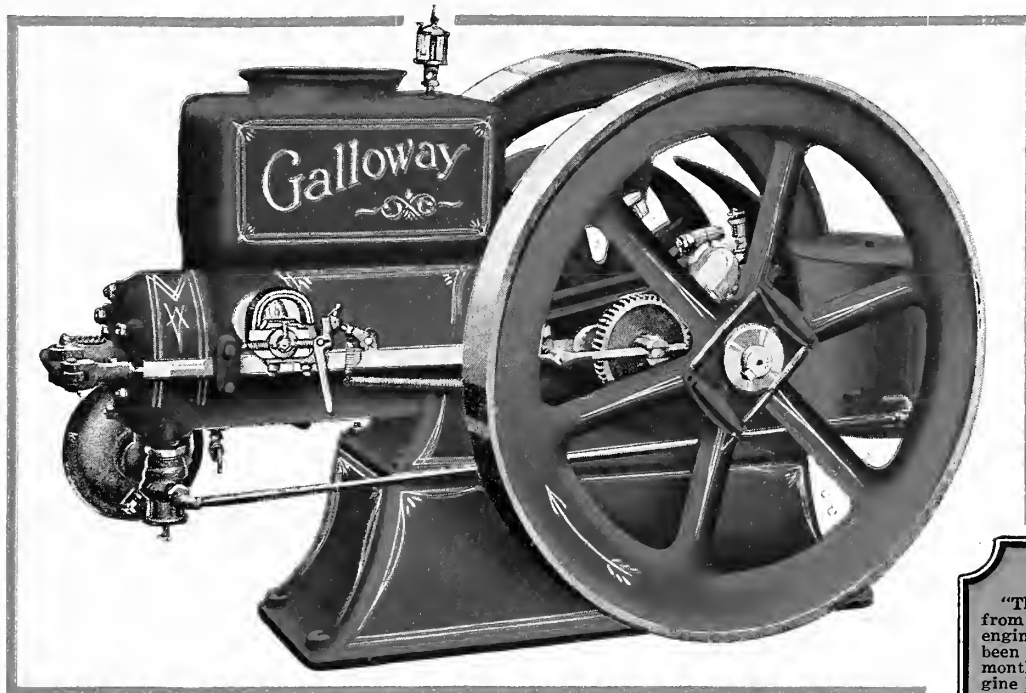

The Galloway 5 H. P. Wonder Engine is economical for the small job and practical for the big job. Don't buy too small an engine—a little surplus power is always a handy thing to have. Times

Wonder

and occasions are constantly coming up when you need just a little bigger engine than you had in mind when you made your purchase. Buy this 5 H. P. engine and you will be prepared for the emergency. You will be able to handle the extra-heavy jobs as well as the ordinary every-day work. Cost of operation is small because the automatic fuel regulator measures the amount of fuel consumption by the load the engine is pulling.

This famous Galloway 5 H. P. Wonder is one of the best all-around farm sizes to own. It will operate the big wood saw, feed mill, sheller, cider press, hay hoist, wood shop, portable elevator, rip saw, blacksmith shop and many other machines requiring from 5 to 6 horsepower. It can easily be slowed down where less power is required. The sturdy construction, the slow speed, the long stroke and the wonderful cooling system make this an engine for lifetime service.

30

DAYS'
TRIAL

Every Galloway Engine of any size or style is sold to you on 30 days' trial with the understanding that after you have used it you have the privilege of returning it and receiving your money back if you do not think it is the best you can buy for the money.

5 H. P. Portable

The 5 H. P. Wonder Engine is furnished on your choice of all steel hand portable or on steel horse portable trucks. The horse portable trucks are built heavier but both styles come complete with tongue. Have center of gravity low down and three-point support on front pivot which holds truck level on uneven ground.

Specifications

The 5 H.P. Wonder Engine comes all complete on heavy iron sub-base as shown and equipped with 12x6 in. plain iron pulley, automatic fuel regulator and your choice of Webster Tripolar or Wico High Tension Magnets. Guaranteed to pull full 5 H.P. at 400 R.P.M. and more at higher speed. Shipping weight 850 lbs. If you wish friction clutch pulley instead of plain iron pulley, deduct \$2.00 from the prices shown and then add the regular price as shown on page 39 for the friction clutch pulley you select. For more detailed specifications see page 35.

H. P. HEAVY DUTY

Some engines balk when the emergency happens, but this big Heavy Duty type Galloway 9 H. P. will walk off with any job. It is designed to furnish ample power even in emergencies. Study the table of specifications on this engine at the bottom of page 35. Compare its long stroke and slow speed and diameter and weight of fly wheels with any other engine in its class. The special design, the sturdy construction and the extra weight in this big Heavy Duty 9 H. P. Engine guarantee long life, practically no repair cost and ample power. It is also economical to operate because of its slow speed and the special automatic fuel regulator which holds down the consumption of gasoline to the exact load it is pulling.

This big Heavy Duty Engine is especially recommended to operate an alfalfa mill, large sheller, threshing machine, heavy hay baler, ensilage cutter, grain elevator, machine shops, planing mill, beet dump and other machinery that you would ordinarily expect to use up to 10 horse power on. Stationary style comes mounted on a heavy iron sub-base as shown and the horse portable on the heavy all steel flexible trucks.

BIGGEST DOLLAR VALUE

Per Horse Power

Lowest Cost Per Year of Service

The calf that went chasing off after a steer just because it was a "fine-looking animal" found out its mistake when supper time came—just the same as the person who buys a cheap, light-weight, high-speed engine—on account of its nice looks or attractive price, will find out his mistake when the engine starts shaking itself to pieces in a year or two.

The Galloway engine needs to be compared to be appreciated. Real, substantial values are what count—slow speed, large bore and stroke—full weight—excess power—low upkeep expense—fuel economy—complete equipment. These mean lowest cost per year of service and more "dollar value" per horsepower.

Slow Speed Galloway engines have the slowest speed rating of any engine made today. This slow speed coupled with their full weight gives you just as much power and yet a smooth-running engine. High speed is bound to produce a lot of vibration. You will never find the slow-speed Galloway shaking itself to pieces.

Bore and Stroke A long stroke means the charge in the cylinder is more highly compressed and the big bore means more power, because the engine takes a larger charge. The long stroke on all Galloway engines gives a long, easy angle of pressure against the cylinder walls—it means the explosion charge is more completely used—it is the most economical and successful type.

Weight Per Horsepower Take the tonnage basis for comparing values. While weight alone isn't everything, nevertheless experts always compare weights because the light-weight engine is subject to a lot of vibration. It is more apt to shake itself to pieces. It means short life and a bigger repair cost.

Figure It Out on Your Own Slate

Just study the comparison of weight, speed, bore and stroke of five well-known 7 H.P. engines of today. Compare the weights of these 7 H.P. engines, compare the speed of these five makes and taking everything into consideration compare the power produced by each according to its bore and stroke. Multiply the bore by the stroke for each engine and see which one gives you the biggest total. Take the specifications of anybody's engine that you have been thinking of buying and compare them with the same size Galloway. The heavy lines below represent the comparative number of years' service of the five nationally known engines listed on the slate.

Competitor No. 1—This 7 H.P. engine is almost 300 pounds lighter and runs 200 r.p.m. faster than the Galloway 7 H.P. It has a smaller bore and a smaller stroke. How can it be as good? How can it be as much engine for the money as the Galloway?

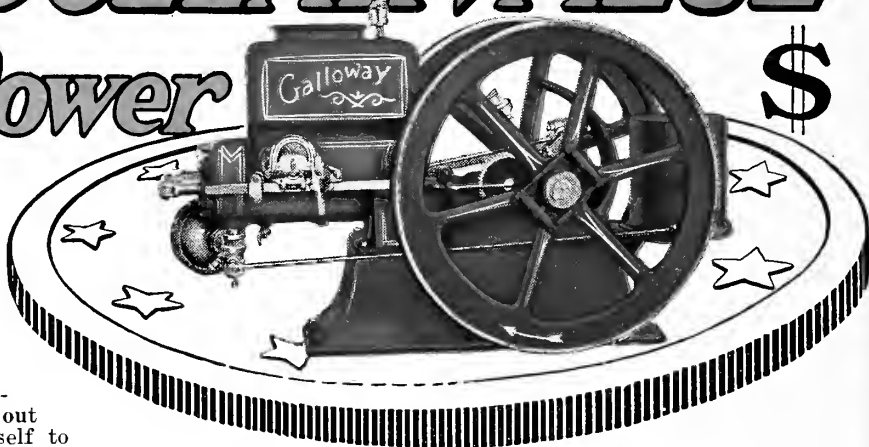

Competitor No. 2—This competitor 7 H.P. engine weighs 325 pounds less and runs one-third faster than the Galloway 7 H.P. The average of its bore and stroke is smaller. It gives you less power and more vibration than the Galloway.

Competitor No. 3—Lighter weight yet and still one-third faster in speed. Altogether smaller bore and shorter stroke, not as much engine in any respect as the 7 H.P. Galloway, but this company asks you more money than we are asking.

Competitor No. 4—This is a real light-weight 7 H.P. engine but with larger bore and stroke than the three competitors above and a slower speed, but still 50 r.p.m. faster than the Galloway. Look at the difference in weight, also the difference in stroke.

The Galloway—This 7 H.P. engine—our Masterpiece—outweighs them all. Has the slowest speed of any and the longest stroke of any. The heavy weight holds it down, reduces vibration and means years of wear and service. The slow speed means steadiness and long life. The Galloway will never shake itself to pieces. The large bore and the extra long stroke furnish an excess of power even at our slow speed. If the speed of the Galloway were increased equal to the speed of any of these competitors (and we have more weight than they have to do it with) we would produce power far in excess of any engine rated at 7 H.P.

Use your slate—or your pencil—before you buy any engine. Figure out what you are getting for your money.

Excess Power

Compare the long stroke and big bore of any Galloway engine with other makes. Our long stroke and big bore coupled with our full weight gives excess power.

Low Upkeep

Thousands of Galloway engines are giving from ten to fifteen years of service with scarcely any repair expense. Our heavy weight and slow speed mean long life and low repair costs. When repair parts are needed our charge is lower than others.

Fuel Economy

The very efficient and sensitive governor used on the Galloway is of the economical hit-and-miss type. The only type you can afford to have on your engine in these days of high-priced fuel. It is adjustable for wear. Its tension can be changed to give various speeds as desired. It regulates fuel consumption to the load you are pulling.

Complete Equipment

Every Galloway engine comes fully equipped, ready for use, which always includes pulley, magneto (except with 1 1/4 H. P.) and sub-base or skids. Nothing extra for you to buy.

A like comparison could be made of other sizes.

21 REASONS WHY!

YOUR CHOICE OF WEBSTER OR WICO MAGNETO on any Galloway Engine except the 1 1/4 H.P. which has the battery ignition. Webster Oscillating Magneto as shown furnished as regular equipment without extra charge. Wico furnished on request at no extra charge. Both are dust, cold weather, fool and rain proof. Should last for the life of the engine. Be sure to request the Wico if you want it, otherwise the Webster will be furnished.

HEAVY CAST-BRASS SIGHT FEED LUBRICATOR. Brass top and bottom has shut off pin. Quickly adjusted to feed exact number of drops desired, whether oil is thick, thin, hot or cold.

LARGE WATER COOLING HOPPER. Extending full length of piston stroke, cools piston more efficiently, and perfectly because it makes greater capacity.

"LIKE A GORK IN A BOTTLE" Arched top, deep water spaced cylinder head effectively corks bore of cylinder. Seals cylinder and prevents "blowing out" of leak-proof gasket.

EXHAUST VALVE 40% LARGER THAN INLET VALVE. Insures quick clearance of burned gases, more power.

ADJUSTABLE PUSH ROD Insures full opening of exhaust valve. Takes up the wear.

"EASY START" ECONOMY GASIFIER. Effectively generates gas from liquid fuel. Thoroughly atomizing.

"VALVES IN THE HEAD" MEAN MORE POWER. Automobiles prove that valves in head eliminate side passage and prevent choking of valves with carbon.

LARGE DIAMETER DRIVE PULLEYS indicate that this is a big, slow speed, heavy duty engine. Compare the diameters. Note the speeds. Remember high speed and light weight make the engine cost less but make it worth less.

INSIDE AND OUTSIDE—NONE BETTER

RIGID ONE-PIECE CONSTRUCTION. Costs you nothing extra to have advantage of this type of construction. Means rigid alignment of working parts. Crank shaft is held absolutely square with bore of cylinder.

EXTRA LONG "EASY ANGLE" I-BEAM CONNECTING RODS insure easy angle for piston thrust, eliminating side thrust on cylinder walls and consequent loss of power.

ADJUSTABLE "LONG LIFE" CONNECTING ROD BUSHING. Quickly removed, cheaply replaced. Easily adjusted while in place to take up wear. Wears slowly.

AUTOMATIC "CONSTANT PRESSURE" CRANK PIN LUBRICATOR. Insures constant pressure on hard oil pump.

LARGE DIAMETER HEAVY WEIGHT FLY WHEELS. Note specifications.

CONSTANT LEVEL FUEL TANK

Tank constructed heavy gauge galvanized steel. Shape insures very slow change in level of fuel full to empty.

BRONZE SHUT-OFF COCK

Prevents leakage or loss of fuel when it is shut off. Large size, conveniently placed; handy.

SUBSTANTIAL CAST OIL SHIELD. Attractive in appearance. Effectively shields crank pin bearing.

NO EXTRA CHARGE FOR HEAVY CAST SEMI-STEEL SUB-BASE, for which many firms charge extra.

MACHINE-CUT CAM GEARS. Shown. Made so can never slip; get engine out of time as is possible if they are mounted separately on shaft. Machine cut gears; quiet. Insures long life.

Worth More Costs Less Than Ordinary Engine

SENSITIVE, FUEL-SAVING "ECONOMY" GOVERNOR. Sensitive fuel-saving, two-ball governor only governor you can afford to have on engine in these times of high-priced fuel. Hit and miss type, insuring perfectly mixed charge whenever charge is needed. Insures easy starting engine in zero weather, as fuel is perfectly mixed regardless of load or speed. Saves both fuel and spark on idle strokes. Adjustable for wear. Adjustable to give variation in speed.

GALLOWAY'S

Practical

Hand and Horse Portable Engines

POWER KINGS FOR FARM! AND FIELD!

The big, strong, heavy duty types of Galloway Engines are real power kings any place on the farm or in the field. If you want the engine to give you the most service possible, order the portable type—on our special design all-steel flexible trucks. The portable engine is really a cheaper engine because you can do so many more jobs

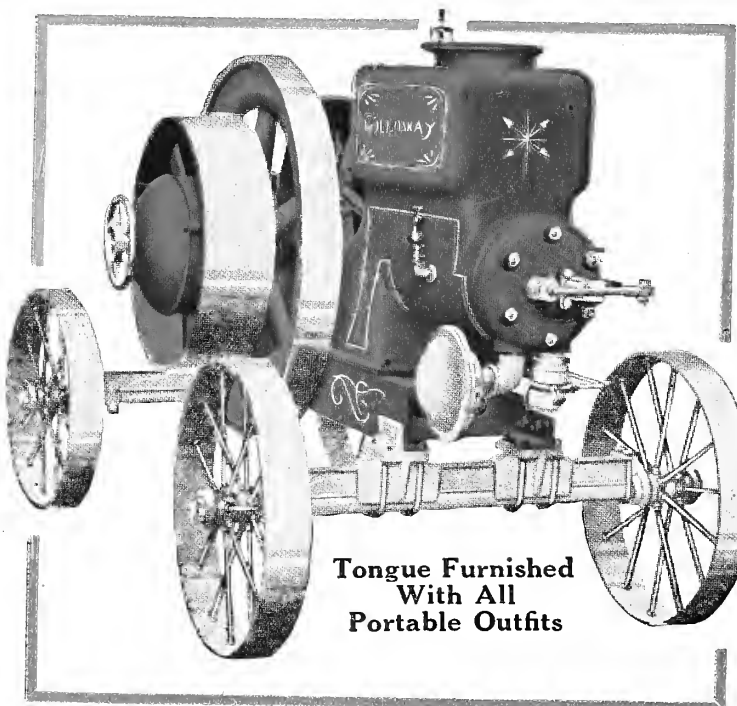

with it. A few more dollars spent on the truck will multiply the service of the Galloway Engine and give you a convenient, reliable power plant wherever and whenever you want it. Both the hand portable and the horse portable styles of all-steel flexible trucks are designed and built to stand rough usage—they will give you a lifetime of service.

Specifications

Hand Portable Trucks

You will find description of the 2½ H. P. Hand Portable on page 29 and the 3 H. P. Hand Portable on page 30.

The 5-H.P. and the 7-H.P. Engines in the hand portable style come mounted on all-steel flexible trucks, built from angle iron 2x3x¼ inches. The trucks are 56 inches long with solid steel axles and 17-inch steel wheels and wood tongue. The special design of the heavy end castings support the load at three points so that your rig stands level even on rough ground.

Tongue Furnished With All Portable Outfits

Specifications

Horse Portable Trucks

The 5-H.P., the 7-H.P. and the 9-H.P. Engines are offered on the horse portable style of truck—and include friction clutch pulleys on these rigs at prices shown. Trucks are made of heavy channel steel with 24-inch steel wheel on the 5-H.P. and 7-H.P. sizes and extra heavy 32-inch steel wheels on the 9-H.P. rig. The horse portable rigs have steel axles and come complete with tongue. The three-point support on front pivot holds the truck level on uneven ground.

GALLOWAY'S Masterpiece

All-Steel Portable Saw-Rig

Has Improved "Roll-Easy" Sliding Saw Table

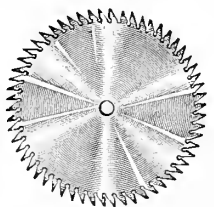

NEXT TO A FOREST FIRE the Galloway Complete Saw Rigs will eat more wood in a day than anything else in existence. You can cut more cords with fewer men with the Galloway because it works faster, runs easier and is safer to work around than any other rig on the market.

NOTICE THE PRACTICAL DESIGN of this wonderful saw rig—notice its all-steel construction, its heavy, rigid channel steel frame. Notice the new improved roller belt tightener and the heavy all-steel trucks upon which the saw frame and engine are mounted.

Cut-Off Blades

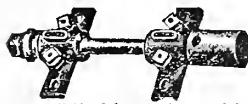

These blades all have 1 3/4-in. arbor hole for use with our regular saw frames. Best quality oil tempered saw steel.

Blades can be used with a little less power than shown in table below if the operator does not try to cut too fast. Shipped from Waterloo.

"I bought a Galloway saw rig about eight years ago. It is sure doing fine work. I have run several different kinds but this is the simplest one of all and it runs all day sawing wood on three or four gallons of gasoline.

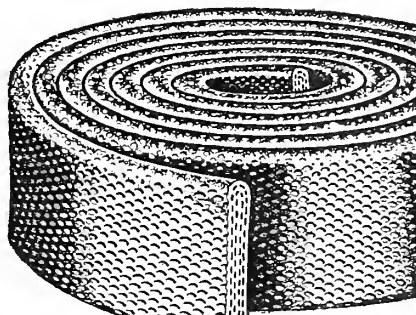

Max Eick, Kelly, Wyoming.
"I sure like my new 7 H. P. Galloway saw rig. I cut 18 ricks of wood in 1 1/2 hours and also pulled a four-roll corn shredder and a grinder with eight-inch burrs. It has lots of power to spare and does good work."
C. M. Barnett, Greencastle, Mo.

THIS RIG IS FASTER IN ACTION because of its improved design, its "roll-easy" sliding saw table and the ample power of the Galloway Engine. Experienced sawyers are enthusiastic and say this rig holds nicer and works faster than any rig they ever saw. Two light horses can take the outfit anywhere.

THE "ROLL-EASY" SLIDING SAW TABLE is supported at four points on the heavy channel steel frame and never tips, sags or binds the saw. It will stand years of severe usage. The weight of both the log and the sawed stick rests on this sliding table which rolls easily on frictionless roller bearings. The engine is mounted with the heavy weight of the cylinder in the center which eliminates all vibration. This style mounting also gives full length belt so there is no slippage and every ounce of power is delivered at the tooth of the saw where it does the work that counts.

RIG COMES COMPLETE—It includes magneto equipped engine, friction clutch pulley, 4-ply rubber belt, heavy guard protecting the operator, 30-inch oil tempered saw blade and our all-steel extra heavy horse trucks complete with tongue. When through sawing, the saw attachment can be detached by taking out a few bolts and stored, leaving a regular horse portable engine for other use.

High Grade Belting

RED FRICTION SURFACE BELT

This rig is a money-maker in every section. The 7 horsepower is furnished in either the right or in left-hand style. The 9 horsepower is carried in stock in the left-hand style only, but the right-hand style will be furnished upon special request without extra charge. Specify which you want.

Galloway Insurance Policy
Policy the Company agrees
to pay every GALLOWAY

Insurance Policy

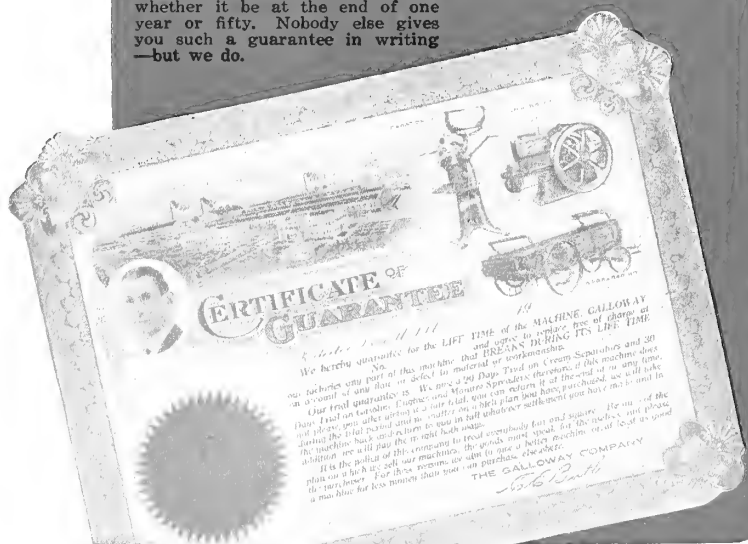

By this Policy the Company agrees to pay the Owner of every GALLOWAY Engine FULL VALUE in

- LONG LIFE { Hundreds our more than 14 years reported still running fine.
- FREEDOM FROM REPAIRS { Less than \$50 per year nor hose power proven by thousands of customers in Cites
- BIG POWER { Cubic contents of cylinders provide
- EASY STARTING { Ask any man who owns one
- ECONOMICAL OPERATION { Guaranteed fuel consumption less than 1 gallon per horse power per hour

more hours per day and more than any engine

You pay good money for life insurance, fire insurance, automobile insurance. The fact that the name "GALLOWAY" on an engine absolutely insures you complete satisfaction not only today but ten years from today, is one of the strongest reasons why you should send that engine order to "Galloway at Waterloo."

A Galloway engine satisfaction insurance means a lot to you, but costs you nothing extra. The "Galloway" name stands for high standard and quality product; it insures the best of service to our customers. It means much to us. This engine satisfaction has been the means during the past twenty years of our placing a Galloway engine in almost every township of good farming area in the United States. The purchase by you of a Galloway engine is just as good as an insurance policy protecting you against high cost, big repair bills, unreasonable fuel expense, and in addition guarantees you satisfaction for many years to come.

Galloways' Latest Success

Ford Chassis Saw Frame

With this saw frame attached to an old Ford chassis you have a big 8 to 10 H.P. 30" blade rig that will make short work of the winter's wood supply at the lowest price ever offered by far. Can be easily attached to any model Ford by removing the body and cutting off the engine shaft.

Attachment is rigidly fastened with four U bolts which can be quickly removed to make place for our Ford feed mill. Built of rugged angle steel with two drop legs.

Not only gives you a big, powerful saw frame, but the belt can be shifted in a minute and applied to any other belt-power use. This attachment on your Ford engine will give you plenty of power to run corn sheller, ensilage cutter, or any other heavy machinery usually handled by 8 to 10 horsepower engine.

We do not furnish Ford chassis shown. We furnish the complete power attachment and saw frame as illustrated. Shipped from Waterloo, wgt. about 235 lbs.

- No. 1C56—Ford saw frame attachment complete with belt and 30" cut-off saw blade, only (chassis not included)\$42.75

Power Pulley
For any belt purpose
requiring 8-10 H.P.

The swinging saw is the big feature of this rig because it brings the saw to the log instead of shoving the log to the saw. It requires little power, 1 1/2-5 H.P., and is much safer than the average buzz saw because swinging the saw to the wood does not cause it to stick or choke. Arrows point to belt tightener which automatically tightens the belt and furnishes constant power as the saw is brought to the log. This belt tightener arrangement is the secret of the big success of this handy little outfit. Rig can be easily operated by one man. Mandrel 20 inches long, 1 1/4 inch in diameter, turned

New Wonder Farm Mixer

One Wheelbarrow to the Batch; One Batch to the Minute.

This mixer is all-steel and built to last. A well-braced and balanced mixing machine that will stand up to any of the jobs indicated below and give you real service for little money. Mounted conveniently on light truck which can be hitched behind your car and can be easily moved as a wheelbarrow. Truck has two sturdy 20-inch wheels and when in mixing position rests upon the heavy, substantial front leg. Truck platform provides ample space for close-grained, carefully selected wood, tongue

mounting a light engine to operate the mixer. All wood parts of close-grained, carefully selected wood, tongue runs through to the rear axle and equalizes the pulling stress. Fitted with clevis for easy attachment to car or truck. Mixer is equipped with sprocket instead of plain pulley, 8 ft. of chain and small sprocket for an engine. When ordering this outfit without our engine specify what bore the engine sprocket should have.

At Last!

A One-Man Simple, Practical Lime Spreader that Really Works

For the first time lime spreading is made a quick, easy, one-man job—and no fooling—no tinkering no back breaking job of shoveling and no clogging up of the machine, whether your lime is wet or dry.

Galloways' New Jiffy Lime Spreader

THE FIRST SUCCESSFUL ONE-MAN MACHINE THAT SPREADS WET OR DRY LIME EVENLY FROM 16 TO 18 FEET WIDE

All you have to do is attach the New Jiffy to your manure spreader with four bolts, connect the drive chain, load up your lime about 6 to 8 inches deep in the box and then get on the seat and ride. Spread just like you spread manure—you can start or stop the spreading from the seat.

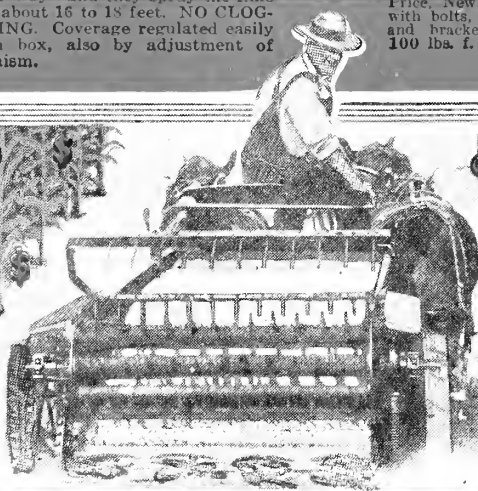

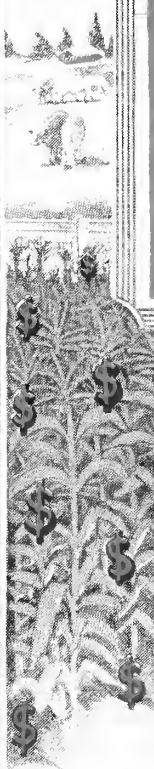

The New Jiffy Lime Spreader is of all steel construction, with hardened bearings. As shown in the picture, this Lime Spreader bolts onto the frame of your spreader. The brackets we furnish hold the New Jiffy right under the end of the spreader box so that as the heater "eats" the load off, the lime drops on the four revolving fans, two turning one way and two the other way—and they spray the lime fan-like to a width of about 16 to 18 feet. **NO CLOGGING—NO SHOVELING.** Coverage regulated easily by depth of lime in box, also by adjustment of spreader feed mechanism.

The New Jiffy works—it's all steel—will last a lifetime—no cheap tin or metal fans to bend and cause trouble. The four distributors on the New Jiffy are just the right size, geared to the right speed, have just the right pitch and are properly placed to give complete even coverage. Equipped with fittings for Alemite lubrication.

Sold on a guarantee of satisfaction or your money back. Made to fit the Galloway No. 8 Spreader; John Deere Spreader with beater on axle; the Gehl; the McCormick-Deering and the New Idea Model 8. Be sure to state what make and style spreader you have.

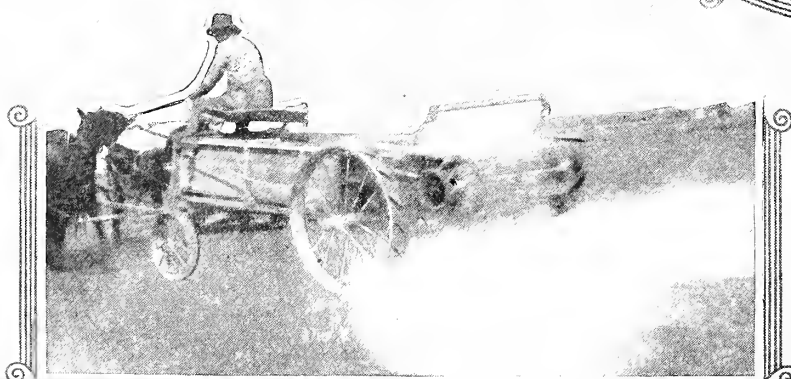

Price, New Jiffy Lime Spreader with bolts, sprocket wheels, fan and brackets complete, weight 100 lbs. f. o. b. Waterloo, only

\$39.85

Dollars & Cents CROPS

The New Jiffy Spreader helps make a "dollar crop" out of a "cent crop"—because it saves your lime (makes it go farther); it saves your time (spreads faster); it saves your back (you ride while it does all the work); it saves you double time, labor (it's a one-man machine); it saves your land (spreads lime so it does the most good); and it saves your crops.

Spreading Manure Is Like Sowing a Crop of Dollars

It increases the value of your crop!

It increases the value of your land!

In every community there are a few run-down farms — poor producers — that can be bought from \$25.00 to \$50.00 per acre below normal values in that community. Then there are a few extra good farms — big producers — that readily sell from \$25.00 to \$50.00 more per acre than the average of the community.

Look around you—pick out the poor, run-down farm of your neighborhood—nine chances in ten it has not been half fertilized—no spreader on it. Now look at the good farm—it's almost safe to say it has had a feeder on it—live-stock to produce manure and a spreader that handle 300 to 500 loads a year.

The point is—"Get the manure onto the land."

Keep your barn and lots cleaned up!

Spreading manure means bigger crops and increased land values.

Spreader Pays Biggest Cash Returns

The Manure Spreader is the best paying piece of machinery you have on your farm!

Why?

Because it turns Waste into Profit!

Common barnyard manure is a by-product on every farm—it is a TOTAL LOSS if not used and it is PURE GOLD if properly spread with a good machine.

The Spreader takes this waste crop and feeds it to your land in a way that does the most good.

A good spreader will pay for itself every year because it saves time, money, labor, horses and crops. It is not a luxury—it's a necessity. It's a loss and a waste to be without one.

SAVES TIME-MONEY! LABOR-HORSES-CROPS!

A COLD, HARD MONEY TEST!

This Is a True Story

A few years ago we put the Galloway Spreader to a practical severe test on a cold, hard money basis. We took thirty acres of ground, prepared it all at the same time in the same way, planted it all to corn at the same time, with the same seed.

Then we divided the thirty acres into three 10-acre fields. On one-third we put no manure at all. On one-third a certain amount of manure was spread by hand with the pitchfork. On the other third the same amount of manure was spread with a Galloway Spreader. The three 10-acre fields were cultivated and tended alike. When harvest time came, the crop from each field was carefully gathered and weighed.

Here Is What Happened

These figures tell the story. There is no argument—there is only one answer—a good spreader will pay for itself every year you use it.

	Bushels Produced	Worth at 60c per bu.
10 acres with no manure.....	275	\$165.00
10 acres spread by fork	560	336.00
10 acres by Galloway Spreader..	765	459.00

Does It Pay?—It Most Certainly Does Pay!

Does it pay? It most certainly does pay! You can figure it out for yourself. On the 10 acres spread by the Galloway machine, there was a net gain of \$123.00 over the 10 acres spread by hand with a fork, to say nothing of the hard work saved. The spreader produced \$294.00 more than the 10 acres where no manure had been used. If the entire thirty acres had been spread with a Galloway machine, there would have been a profit of \$882.00 over no spreading at all. This profit is enough to buy half a dozen spreaders—or a few good cows—or a radio—or some new furniture for the house—or a lot of other things you would like to have if you had the money.

Does it pay? It most certainly does pay! You cannot afford to be without a Galloway Spreader if you are farming thirty acres or more. If you are not using a good spreader, you are losing enough money every year to pay for one. Any good, practical spreading machine really does save time—save money—save horses—save labor—and makes and produces bigger crops.

Winter or Summer All the Same to a Galloway

There is no spreader season any more. The man who owns a Galloway All Purpose Machine spreads over the snow in winter, as well as through other seasons of the year. No clogging of the Galloway Spreader by frozen chunks. The spreader box has a tongued and grooved tight bottom—no chance for frozen chunks to lodge there, either. The all-steel conveyor does not warp, break or rot. The Galloway patented method of applying power from either or both rear wheels gives plenty of traction even if the ground is slippery and in snow a foot deep. The time to haul manure is now—all the time—as fast as it accumulates. With the Galloway Spreader you can do it spring, summer, fall or winter—any day you have a few minutes to spare. Regardless of the time of year, regardless of the weather or regardless of the kind of crop you are going to raise—and regardless of the very best crop rotation—you will save time, save labor, raise bigger crops and get more money if you use a Galloway Spreader. The same effort and work to raise a crop—the same plowing, discing, tending and harvesting—will actually yield more bushels or tons if your land has first been "properly fed" with the accumulations you regularly get around your barn and lots.

Pitching Manure Is Hard Work

Anybody who has pitched manure for a day—or for a week—into a wagon and then thrown it off again by the pitchfork spreading method, doesn't have to be told that it's hard work. You save most of this labor with a Galloway Spreader—it's low down—it's easy to load—and then you sit on the seat and ride while it's being unloaded. It certainly does save your back—but that's not all—it saves a lot of time, too. You can not only spread a load a lot quicker with a machine, but you can load it up quicker as well. Then you can readily see from the story told above that it also saves money—or rather makes more money because it produces bigger crops.

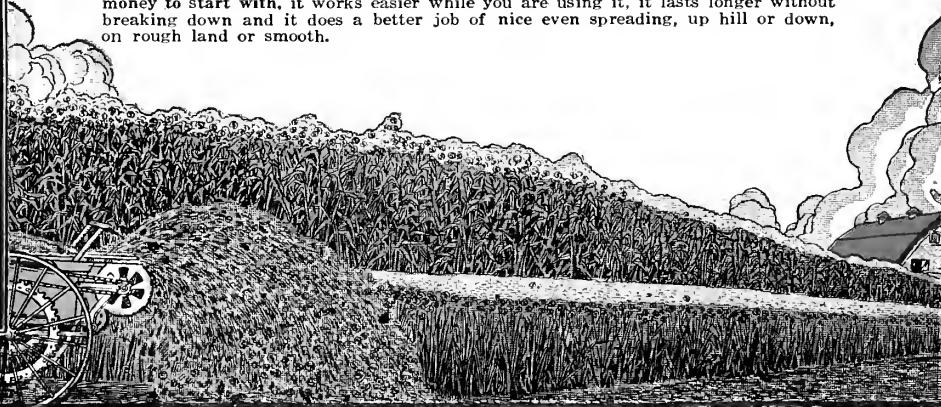

The Galloway Spreader will do all of this and more—because it costs you less money to start with, it works easier while you are using it, it lasts longer without breaking down and it does a better job of nice even spreading, up hill or down, on rough land or smooth.

\$1.00

PER HOUR FOR YOUR SPARE TIME

A recent report published by the Iowa State Agricultural College shows every ton of barnyard manure to be worth \$1.97—IF PROPERLY SPREAD. This \$1.97 is the actual net increase of cash return over a 10-year period by forty farmers on 40 different kinds of Iowa farms.

You can easily spread one ton per hour with a Galloway Spreader. Even if you wasted half of the time you could still make \$1.00 per hour any time you wanted to go out and spread a ton of manure. Don't let a single ton of manure go to waste on your farm. Use a good spreader—use it as fast as your manure accumulates and for every hour you put in spreading, you'll get an extra dollar's worth of crops "as sure as you are a foot high."

GALLOWAY GIVES BIGGEST SPREADER VALUES!

It Costs You Less—But It's Really Worth More

The Galloway Spreader is a genuine **ALL PURPOSE MACHINE**—not just an ordinary manure spreader—it spreads manure—of course it does—it has had a reputation for twenty-five years of spreading manure **just as good, just as fast and just as easy** as any spreader made. In addition, it will also spread lime, phosphate and other commercial fertilizers, as well as straw and old stack bottoms.

You may not expect to use lime this season or even next year—but you may want to some day. If you buy the Galloway you have an all-purpose machine. Our new Jiffy Lime Spreader will fit the Galloway No. 8—and it is the

lowest in price, best in operation and covers the most ground of any fertilizer spreader on the market.

The Galloway Spreader gives you a choice between two styles of front trucks. It gives you the Alemite Pressure System of greasing. It gives you many patented features not found on any other spreader made. It gives you practical, sturdy, simple construction. It gives you a big capacity, low down machine with every worth-while feature found on anybody's spreader—you cannot get a **better, stronger, easier pulling manure spreader than the Galloway**, and best of all—you can buy it for less money than others are asking.

What Do You Get?—

For the **EXTRA MONEY** Others Charge You

Where does the extra \$20, or \$30, or \$50 go that anyone pays for a spreader at the local implement store over the \$117.50 price for the Low Down, Big Capacity Galloway No. 8 Spreader? Compare the Galloway Spreader, point by point, feature by feature, design, material and construction, with any other spreader made. Then sit down and ask yourself this question: "What do I get for the extra \$20, \$30 or \$50 which I am asked to pay for the other makes?"

The other spreaders do not weigh any more, they do not hold any more, they do not spread any faster or any better. It only takes about so much material and labor to build a spreader and no one can say there is \$40 difference between any two spreaders today. You simply can't get that much difference in value in either extra labor or extra material. The extra price other people ask is put on just to cover up their expensive selling methods. Why should you pay this extra money which does not go into the spreader but which does go to pay the expense of the four-profit system of selling.

How and Why We Can Do It

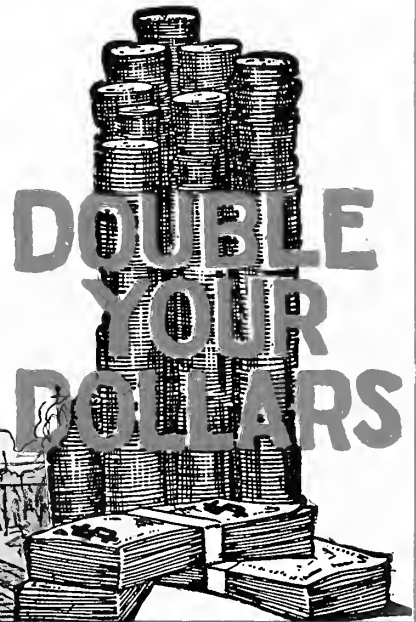

The Galloway Spreader is a wonderful machine, sold at a wonderfully low price—but there is nothing mysterious about it. Hundreds of people have written and asked us how we can sell such a good machine at such a low price—the answer is easy—First, quantity production. Second, the Galloway system of direct selling at factory prices.

We buy our raw materials—iron, steel, lumber, etc.—in large quantities, not only for our Manure Spreader Factory but for our Engine Factory, Separator Factory and other Factories as well. Purchasing material in tremendous quantities for cash gives us the best price and the biggest discount possible. Then our immense production means a very low manufacturing cost. To this actual cost of material and labor, we add **ONLY ONE** reasonable profit, giving our Galloway customers the benefit of a factory price on one machine—just as good a price as a dealer can get when he buys a carload from his jobber.

If you don't know you can easily find out what the dealer in your town wants for his style and make of spreader he sells. Compare this price with the Galloway price and you will soon see what you are paying **EXTRA** to support the four-profit system of selling. Buy at factory prices—make every bit of your dollar buy merchandise for you—save the middlemen's profits—keep that extra \$20 or \$30 or \$50 in your own pocket or your own bank account in place of giving it to some dealer or agent—that's the way to double your dollars.

Galloway Manure Spreaders

EVERY MACHINE A FINISHED

All Styles Equipped with Alemite Zerk Lubrication in Place of Grease Cups. Also New-Type, Wide-Spread Attachment to Fit All Styles, If Wanted

Made in Five Styles and Sizes

There are five different styles and sizes in the Galloway Manure Spreader Line.

THE LOW DOWN NO. 8—Complete, sturdy, one-piece machine with 70-bushel capacity. For descriptions, specifications and prices see page 50.

THE TWO-PIECE NO. 5—Same capacity and box construction as the No. 8 but mounted on and detachable from steel trucks. For descriptions, specifications and prices see page 49.

THE HANDY NO. 1A—Similar in style to the No. 5, having box detachable from trucks. Narrower and smaller capacity but with same construction features. For descriptions, specifications and prices see page 49.

TWO SIZES OF BOX SPREADERS—Our No. 1 and No. 2 Box Spreaders are complete boxes with all spreading attachments, sprocket wheels, etc., to fit your own farm trucks. Furnished for any width truck with either metal or wood wheels. For descriptions, specifications and prices see page 45.

Built to "Stand the Racket"

Study this picture over carefully. Read about the various construction features, many of them exclusive on the Galloway line of Spreaders. You will readily see that every Galloway Spreader is built to "stand the racket." Our 20 years of experience in constructing, improving and selling spreaders direct to the farmers has eliminated all of the weak points. These machines have been toughened and strengthened and balanced to a point where they will stand an unreasonable amount of abuse and years of continuous hard service. Every machine is built to last—built for service and built to do a perfect job of nice, even spreading. Its construction is simple yet strong and serviceable.

Our New Improved Wide Spread attachment is lower down—it does a dandy job

Solid steel beater. New improved feature. Travels fast, pulverizes all kinds of manure, runs close to ground. Wind cannot interfere with proper spreading. Beater teeth high carbon steel 7-16 inch in diameter. Riveted. No loose teeth. Beater shaft lubricated by hard oilers. Another secret of low cost of repairs on all Galloways.

The matchless Galloway mechanism showing roller feed, positive drive (and right here we accomplish with about 20 pounds of tough unbreakable material what other manufacturers try to accomplish with 100 to 250 pounds of brittle gray iron). No heavy complicated mechanism in this feed device. Positive and direct, exclusive on the Galloway. Great secret of light draft. Notice it drives from both sides.

Positive action feeder. Feeds same speed going up hill or down hill.

Extra low down machine, only 42 inches high at center of box. Very low down, easy to load. Also shows steel angle top rail. Great improvement, prevents warping of box, insures long life.

Heavy carbon steel conveyor insures long life, no warping or twisting of wood slats. Tight bottom holds liquid manure.

Improved steel wheel with grooves for riveting spokes, keeping the wear off the spoke heads. Also notice heavy flange on tire. The groove and flange add 25 per cent to strength of wheel.

Reasons Why It Is Superior

FIRST: Perfectly balanced. Not too heavy, not too light. Properly made of toughest malleable steel. Does away with hundreds of pounds of cumbersome iron. Big capacity, two-horse spreader.

SECOND: Matchless, frictionless roller feed mechanism. An exclusive Galloway feature. Worth \$50.00 on any spreader. Costs nothing extra on the Galloway. Patented.

THIRD: Angle steel top rail and heavy channel steel underframe. Banded together with bands of steel. No warp, no twist, no sag, no breaking of box, top or sides. Worth \$25.00 extra on any spreader but exclusive on the Galloway.

FOURTH: Wonderful, simple, patented detachable force feed. Cleans out the last straw. Worth \$25.00 on any spreader but exclusive on the Galloway.

FIFTH: Positive double chain drive. Power applied from both sides. Insures driving beater at uniform speed on uneven ground and reduces draft on horses materially.

SIXTH: Continuous drive differential. Keeps spreader operating while turning around and gives perfect line adjustment. Patented.

SEVENTH: Complete Alemite Zerk lubrication makes it handy and easy to grease. Machine works easier and lasts longer.

EIGHTH: Solid bottom which greatly strengthens box and retains all juices that are rich in fertilizing properties. Also enables the Galloway to handle all kinds of commercial fertilizer, including lime.

NINTH: All-steel beater which pulverizes manure and never wears out. Runs close to ground so that spreading is done evenly on both windy and still days.

TENTH: Choice of New Non-Whip all steel auto type—or our special cut-under front trucks. Hitch is hack close to load which lightens the draft and still gives square turn with either style.

Are Quality Built Throughout MECHANICAL MASTERPIECE

Choice of Standard Wagon Type Front Trucks--or Our New Non-Whip, Auto-Type Front Truck--at Same Price, on No. 8 Spreader Only

Shows 1½ - inch heavy angle steel top rail where bolt goes through to steel channel at bottom.

Gear lever. Easy reach of driver's seat. Can be thrown in while the horses are moving.

Detachable force feed. Worth \$25 on any spreader. Cleans out to last straw. Carried down by steel conveyor and automatically trips when it approaches beater.

Comfortable metal bucket-type seat furnished as regular equipment. Wide reversible wood seat as shown at \$1.00 extra.

Feed regulator. Can throw conveyor out of gear and still beater will run. May be regulated to feed from 4 to 24 loads per acre.

"I am surely well pleased with my Galloway No. 8 low down spreader I purchased of you. We pull it right along with one small team weighing about 1,100 pounds each and they pull it easily. It spreads the manure as well as any spreader I have ever seen. We have used the Galloway all winter to clean out the barns and sheds over the ranch and it handles frozen chunks, coarse wet manure and the fine manure without a bit of trouble."
Geo. W. Woten,
Rockville, Neb.

"Your No. 8 spreader works fine. It is the lightest draft spreader I ever saw; two horses handle it easily. I saved \$32.40 by buying from you."
John Sanders,
Sisseton, S. D.

"Received the No. 8 spreader in good condition and works fine. I am more than pleased with same. Will say that buying of your company has saved me \$23.00."
Henry Schaffer,
Culbertson, Neb.

"The thirty days' trial on my No. 8 spreader is up tomorrow and as it has given complete satisfaction I shall keep it and thank the day I answered your advertisement, for I know that I saved at least \$15.00."
L. C. Dry,
Du Quoin, Ill.

"I received the No. 8 low down spreader. It surely is a dandy. I consider it the best investment on my farm. Not only did I save \$25.00 but I like it much better than others I see about me."
A. G. Beinke,
Harper, Iowa.

Good view of angle steel top rail, which with heavy bolts through the channel below binds the top and bottom together.

Extra heavy hardwood cross pieces and stakes, insures long life.

Heavy channel steel foundation and also steel cross members, built like a bridge. Frame will last a lifetime.

On No. 8 Spreader you have choice of standard front wagon trucks as shown, or our new non-whip auto type truck.

Extra thick spokes. Check our spokes up with all others. You will find ours heavier and stronger.

NOTICE—Alemite Zerk lubrication replaces grease cups all over on all styles. Handy to use—easy to grease—and sure to work.

Our new rear wheels have continuous lugs which prevent rattling and shaking when driving on pavement or smooth frozen roads—but do not decrease traction any.

Drives from Either or Both Rear Wheels

Don't overlook this special feature on every Galloway Spreader—our patented continuous differential on both ends of the beater shaft permits the drive chains to apply the power from either or both rear wheels to both ends of the beater at the same time. This takes away all of the strain and twisting produced when the power is applied to one end only as is the case on most other makes of spreader.

Every Machine Comes Complete

If you buy a Galloway Spreader you don't have to go and buy a lot of extra equipment or rob some wagon on your farm, because our spreaders come equipped with doubletrees, tongue and neck yoke—already to hook onto and do the job. The lever on one side of the driver's seat throws the spreading mechanism in and out of gear. The lever on the other side, regulates the spreading from four to twenty-four loads per acre as you wish. There is an adjustable guard over the drive chains on both sides to prevent the manure falling over and clogging up any part of the working

mechanism. Our patented force feed is detachable so that it can be used or not as you wish. It forms the front end of the box which holds your load in. The wheels and all metal parts are thoroughly painted, the wood parts of the truck are painted, varnished and neatly striped, the box is thoroughly painted both inside and out including the floor. Every machine has a substantial, comfortable foot rest the full width of the box.

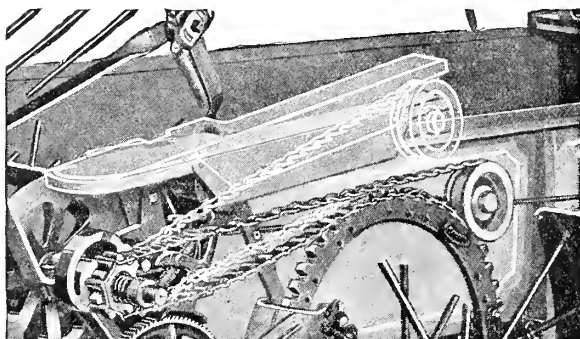

Again we say—The Galloway Spreader comes complete in every detail—an all-around machine guaranteed to do just as good a job on rough, hilly land as on any level field. It will spread evenly, perfectly and handle as big a load as you can pile on.

Simple--Sturdy--Practical Construction

Positive Double-Chain Drive

Every Galloway Spreader has two drive chains—there is a large drive sprocket on each rear wheel and a chain running from each drive sprocket to each end of the beater shaft and the other working parts. One drive chain on each side like picture below. These steel drive chains are operated from the driver's seat—by working a lever you throw both sides into gear or out of gear as you wish.

Notice in the picture how this steel chain "wraps" over the complete top of the large drive sprocket wheel—it absolutely holds—no chance for it to jump off or slip—when the machine is put in gear for spreading, these two drive chains furnish all kinds of power to the beater and wide spread attachment. These drive chains and working parts are covered with a shield to prevent any of your load from clogging up the machinery.

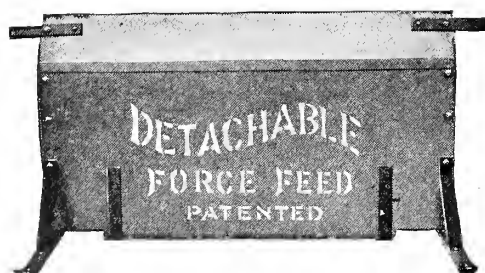

Strongest Spreader Gear Made Has Mandt Steel Front Trucks

The picture here shows the type of front trucks used on our No. 1A and No. 5 Spreaders and also on the No. 8 Spreader if you prefer a Standard Wagon Type of Mandt Steel Gear to our new Non-Whip Auto Type Front Truck pictured and described on the next page. This Mandt Steel Gear has been a standard Galloway product for almost twenty years. There have been improvements on it from time to time and as years of use developed any weak points, these places have been strengthened until we are now willing to match these steel gears against any farm truck ever built.

The wheels are a little heavier and a little stronger than you will ordinarily find on anybody's spreader. Spokes are all oversize. Heads welded into the tire which is grooved to keep all the wear off the spoke head. The tire is also flanged which adds 25% to the strength and cleats are continuous which prevents rattling and jarring when driving on pavement or smooth, frozen roads. Large oversize solid steel axles. Our own special design of fifth wheel which permits square turn. Extra strong, well ironed doubletrees, neck yoke and pole included with each complete spreader. The hitch is close back to the load.

If you order the No. 1A or the No. 5 Spreader you can, when through hauling manure, take off the spreader box, put it away and then use the trucks for a hay rack, wagon box, hauling hogs or any other work—then you will have a good strong farm truck for the rest of your life, too.

Patented Force Feed Board Cleans Out to the Last Straw

The detachable force feed board is another Galloway patented idea that helps to make the Galloway Spreader just a little better than all others.

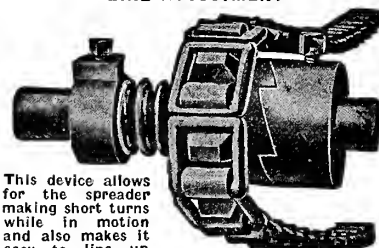

You place this board in front of the box like a front end gate—it rests on the conveyor chain and travels right down to the beater with the conveyor chain and forces the last forkful of load out of the box. It keeps the load packed tight and forces the load evenly against the beater—as much at the end as at the start, so that your spreading is uniform—no tapering off. It cleans the box out to the last straw so that there is absolutely none of your load in the box to haul back to the barn or clean out by hand. It automatically trips at the end of the load so that you pay no attention to it until you get back to the barn and are ready to reload. Then all you have to do is move it up front again. Any time you do not want to use it, you can lift it out and set it aside. Hundreds of farmers tell us this feature is easily worth \$25.00—but it's a patented Galloway feature and not found on any other spreader.

Patented Drive Differential

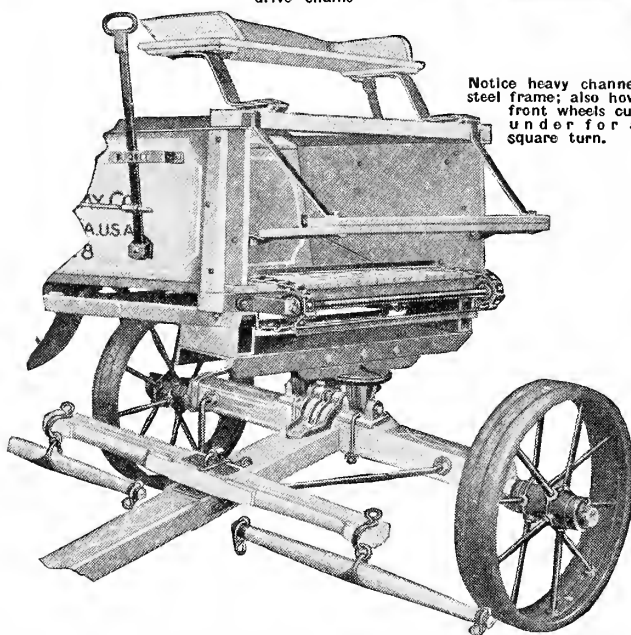

You have often noticed that when you turn your wagon the outside wheel, having more ground to cover, turns faster than the inside wheel. You can readily see that a rigid mechanism driving from both wheels would be broken or twisted out of shape when turning by this difference in speed. Most spreader makers have dodged this point by using only a one-wheel drive with a constant strain on the beater; others resort to driving the beater half the time from one side, half from the other by staggered cogs.

Galloway engineers alone have solved the problem. The Galloway patented differential and line adjustment takes care of this difference in speed of the wheels and gives you a direct, positive drive from both rear wheels. This not only gives the Galloway an exclusive feature worth \$25 or more to you in saving strain and repair bills but also shows the care taken throughout the spreader to build absolutely the best spreader on the market. Every point of its construction has received the same intelligent attention as is given to this problem.

COMBINED DIFFERENTIAL AND LINE ADJUSTMENT

This device allows for the spreader making short turns while in motion and also makes it easy to line up drive chains

Notice heavy channel steel frame; also how front wheels cut under for a square turn.

Above picture shows the Mandt type of Standard Wagon Gear on the No. 8 Spreader. You have your choice on No. 8 of this style front truck or the new Non-Whip Auto Type Front Truck as shown on the next page. The above style only furnished on the No. 1A and No. 5 Spreaders.

New Features Make It Your Best Buy

Alemite Lubrication

Here's another new feature. All Galloway Spreaders are now equipped with standard Alemite Pressure Lubrication System. Regular Alemite Zerk fittings to all parts to fit the standard Zerk 6B grease gun. One man with one hand can grease the spreader and do a sure, thorough job in fifteen minutes' time. Greasing is made such an easy and quick job that you can do it often, which will make the machine pull easier, work nicer and wear much longer.

Solid Bottom Box

Yes, the Galloway has always had a solid bottom box—in fact, I think we were the first to start this feature and hold strictly to it. Spreader bottoms are made out of the best grade tongued and grooved seasoned flooring. They are thoroughly painted and will last for years. Other spreader manufacturers have followed our example and come to the solid bottom box because it holds all of the juices so rich in fertilizing qualities. You do not lose the best part of your load going to the field—there are no slats where frozen chunks can lodge and stop or break your machine.

Perfect Feed Mechanism

The feed mechanism on the Galloway Spreader is another patented, exclusive idea. Our engineers have done away with all heavy, cumbersome machinery requiring three or four horses to pull an ordinary two-horse load of manure. The feed mechanism on the Galloway is simple with the least number of working parts possible—but it is made out of the toughest, unbreakable malleable iron and steel. It withstands wear, does not break and it is so accurately made that there is no slipping or jumping cogs and your feed mechanism is working properly, even on rough, hilly land, or if your spreader is on a side-hill twist.

All Steel Beater

The beater is the business end of a spreader. The spreader is not working unless the beater is going—therefore the beater has the job to do and the Galloway beater is specially designed to withstand the hardest use and the most abuse and still keep on doing good, even spreading. Beater is solid steel in every particular. Angle steel bars with steel teeth riveted in, solid steel beater axle with power applied at both ends from both rear wheels which relieves all twisting and pulling strains. The Galloway beater will wear out half a dozen ordinary spreaders.

These Little Points Worth a Lot on Any Spreader

Besides the big features such as the beater, feed mechanism, the wheels, the front trucks, the wide spread, etc., there are a number of other important features on the Galloway Spreader that are worth having. These little odds and ends are worth considerable. For instance, every Galloway Spreader comes complete with doubletrees, tongue and neck yoke, nicely painted. The spreader box is also painted two coats and then varnished inside and out. Every spreader box has a wide substantial foot rest and you can ride all day on our comfortable seat without wearing yourself out. The drive chains and the feed mechanism are all carefully covered and protected so as to keep any manure from falling down and interfering with the easy operation of the machine. The iron and steel top rail along the spreader side panels is a big protection and a help. The top of the box is also protected and the side panels never warp, crack, sag or give way. There are a dozen other little features that have had careful attention—you will notice and appreciate them when you get your Galloway Spreader.

NEW "NON-WHIP" AUTO STEER TYPE FRONT TRUCK

Here's another new Galloway feature. It's not only new on our spreaders but it's new because it's different and better than the ordinary style of auto steer truck offered on other makes of spreaders.

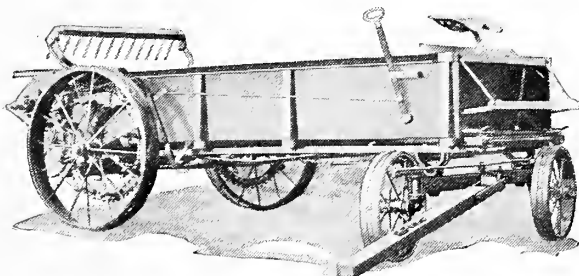

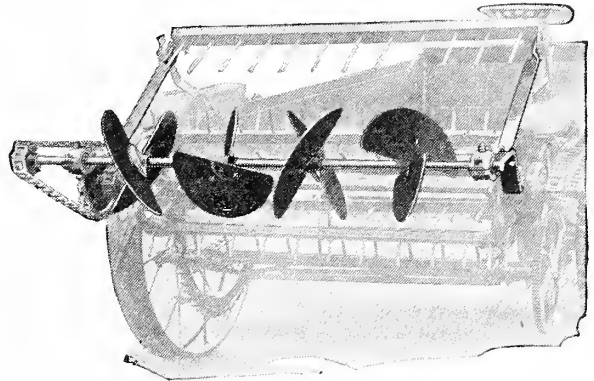

While working on this new "Non-Whip" Auto Steer Truck, Galloway engineers got a bright idea. They discovered that a spreader is entirely different from an automobile—because the automobile pushes from behind and the spreader pulls from in front. After we discovered this simple, practical fact, it did not take long to work out a simple, practical non-whip type of front truck that really is a success. Every other spreader on the market that has the so-called Auto Steer Front Axle, is built on the theory of the automobile—pushing from behind. That's the wrong theory. The Galloway new "Non-Whip" front axle is built on the theory of pulling from in front—that's just how you farmers pull the machine.

The Galloway new "Non-Whip" Front Truck is the only one where both front wheels and the tongue remain parallel at all times, regardless of how short you turn. You can turn as short as you please with the Galloway and neither front wheel skids—they just turn and follow the tongue where the pulling comes from. Look at the picture or the actual spreading machine of any other spreader made that has the so-called auto steer feature. See how the front wheels get out of line with each other and with the tongue when you go to turn short. See how one wheel skids or twists over on the edge of the tire. Just built on the wrong principle, that's all.

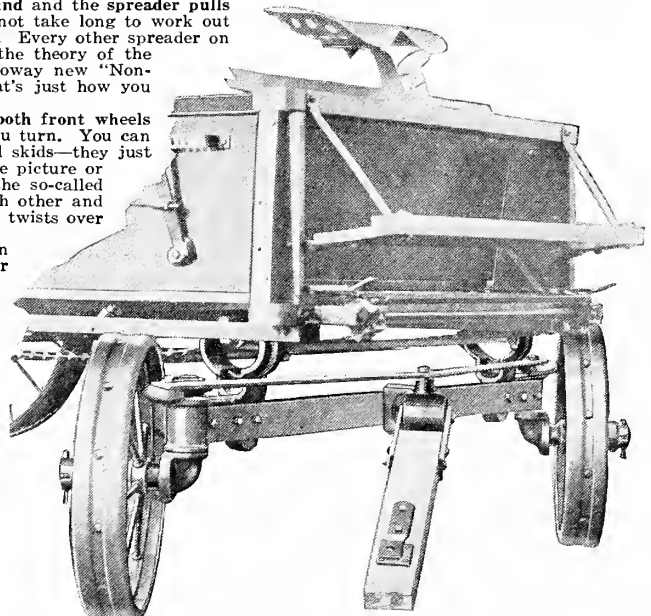

If you prefer the auto steer type of front trucks to our standard wagon type of Mandt steel gear, you can have your choice on the No. 8 Spreader at the same price.

New Improved Wide-Spread

The Galloway now has a new improved wide spread attachment. It will fit any spreader we make but is offered as a separate attachment because many farmers do not care for a wide spread feature. The wide spread attachment has caused all spreader manufacturers a lot of concern. They are a hard thing to work out to fit all kinds of conditions and all kinds of manure. The Galloway wide spread has been as good as anybody's and we believe now the new improved design is the best one there is on the market. We will say frankly, however, that if the manure has a large amount of long green straw or a lot of alfalfa or clover mixed in with it, the wide spread is apt to wind up and cause trouble. Under half way favorable conditions, the new improved Galloway Wide Spread pictured here will spread evenly and nicely twice the width of the box. Any Galloway Spreader is a complete machine without the wide spread feature, but we will gladly include it at the quoted price of \$10.00 extra and guarantee it to do as good a job as any spreader on the market.

Above picture shows our Big Low Down No. 8 Spreader with our "Non-Whip" Auto Steer Front Axle. See how short it turns. See how both front wheels are parallel with each other and with the tongue, where the pulling comes from.

Notice sturdy construction; also that front wheels stay parallel with the tongue.

THE WAGON BOX SPREADER

CONVERTS YOUR WAGON GEARS INTO A COMPLETE EFFICIENT, LOW-PRICED MANURE SPREADER

Famous the Country Over

Twenty years ago the first Wagon Box Spreader ever built was exhibited at the Iowa State Fair. A large spreader manufacturer—one of our competitors—saw it and remarked, "If that Wagon Box Spreader will work, they will do the spreader business of the world."

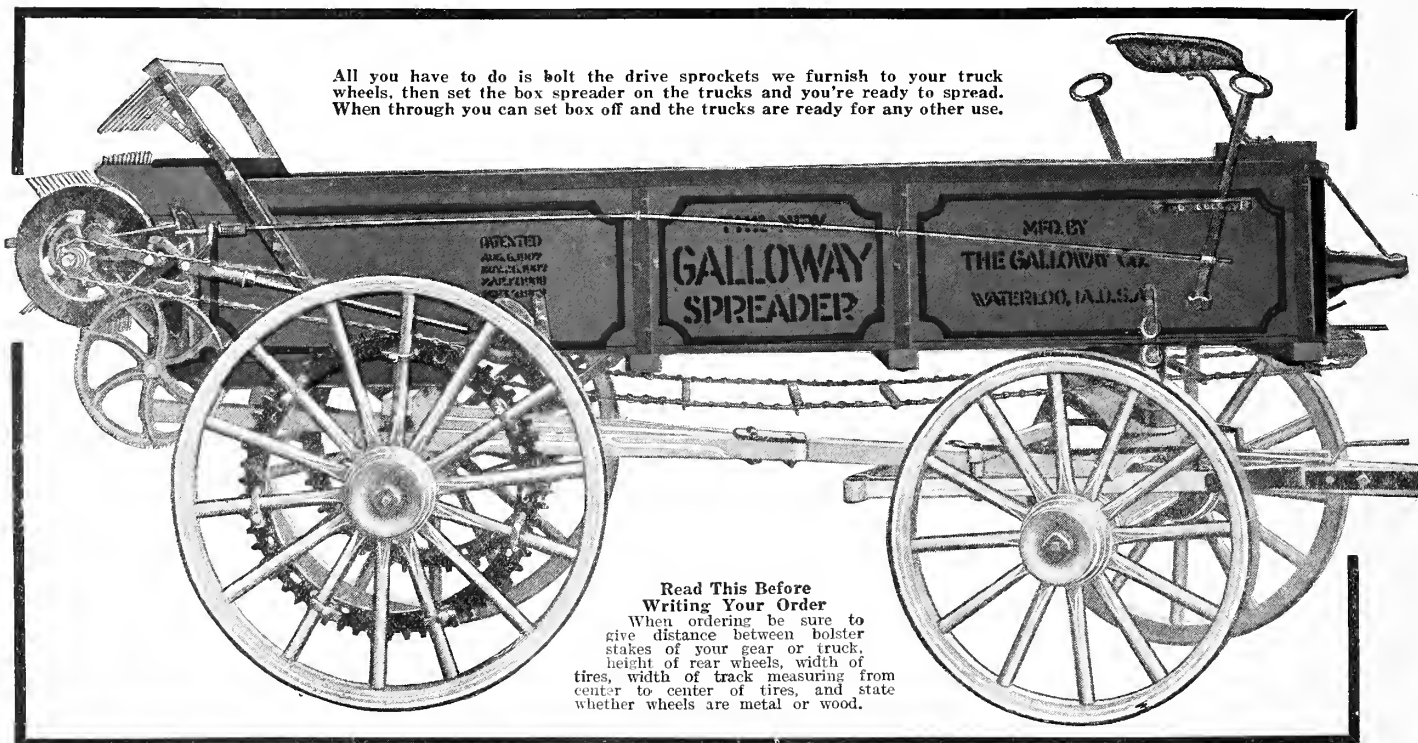

WORK? We should say it did work, and they have been working ever since.

The Galloway Wagon Box Spreader has been a phenomenal success. There are nearly 100,000 of them in use today. We are shipping them by the hundreds into all parts of the United States. Every one of them sent upon 30 days' trial and guaranteed to be satisfactory in every respect or your money back. Could we keep doing this for twenty years if this box spreader did not work? No—never. The Galloway Famous Wagon Box Spreader is still the best and lowest priced spreader on the market.

Does the Job for \$72.50

These Box Spreaders have the same substantial box construction as used on all Galloway Spreaders. They have the best seasoned boxes with beds of smooth, matched, hard pine flooring. They have the all-steel conveyor, patented force feed, double drive chains applying power to both ends of the beater from both rear wheels, the all-steel beater, roller bearing feed mechanism, angle steel top rail and the independent control by two separate and convenient hand levers of feed and beater. The Box Spreader comes complete with driving sprockets, driving chains and mud lugs. It is made in two sizes to fit your own running gears and for either metal or wood wheels. Anyone without experience can adjust the Box Spreader to fit the running gears easily. Then it is just a matter of setting it on when you want to use the spreader and setting it off when you want to use the trucks for other purposes.

All you have to do is bolt the drive sprockets we furnish to your truck wheels, then set the box spreader on the trucks and you're ready to spread. When through you can set box off and the trucks are ready for any other use.

Read This Before Writing Your Order

When ordering be sure to give distance between bolster stakes of your gear or truck, height of rear wheels, width of tires, width of track measuring from center to center of tires, and state whether wheels are metal or wood.

with spreader. New im-

proved wide spread attach-

ment, \$10.00 extra. F.O.B.

WATERLOO, IOWA.

Trucks Not Included

Made in Two Sizes

No. 1 Wagon Box Spreader—Box 38 inches wide, 17 inches deep, 120 inches long. Capacity 50 to 55 bushels, depending on how you load. Comfortable metal seat as shown. Force feed attachment, large drive sprockets, driving chain and mud lugs included with the complete box and spreading mechanism. Weight 700 pounds.

No. 2 Wagon Box Spreader—Box equipped with special fittings to attach wide track gears (5 feet 2 inches, center to center of tires), with bolster stakes 38 inches apart. Box is 38 inches wide, 17 inches deep, 120 inches long. Capacity 50 to 55 bushels, depending on how you load. Weight 700 pounds.

Be Sure to Tell Us Whether
Your Trucks Have Metal
or Wood Wheels

30 Days' Trial

If you are a little skeptical about the Wagon Box Spreader doing a satisfactory job, just order one on trial—use it 30 days and then if you are not entirely satisfied you can send it back and we will refund whatever settlement you have made and pay the freight both ways.

Low Freight

The Wagon Box Spreader is not very heavy—it can be shipped at the low third class freight rate from Waterloo to Springfield, Missouri, 447 miles, for only \$3.54; to Denver, Colorado, 785 miles, it is \$7.87, and to Davenport, Iowa, 128 miles, the freight is \$1.95. You can easily estimate the freight to your station but we will tell you the exact amount upon request.

What Users Say

"I bought a Galloway Box Manure Spreader eight years ago and I never have been out one cent on it. My neighbors have used it, too. It sure is a good spreader. Two horses are all you need on it. I don't know of a cheaper piece of machinery a man could buy than a spreader for a farm."

Bert B. Box, Duquoin, Kansas.

"The Galloway Wagon Box Spreader which I bought from your company about eight years ago has certainly given great satisfaction. I have spread about 300 loads of manure each year since I bought it, without a cent of expense."

Johnstone Lind, Jerome, Idaho.

"I bought my Wagon Box Spreader from you in 1915 and I think it is one of the best spreaders on the market. I have used it for 10 years without a cent of repairs. I haul from 200 to 300 loads a year. When this one is worn out my next one will be a GALLOWAY."

Albert Mencke, Huron, S. D.

Two Sizes with DETACHABLE BOX

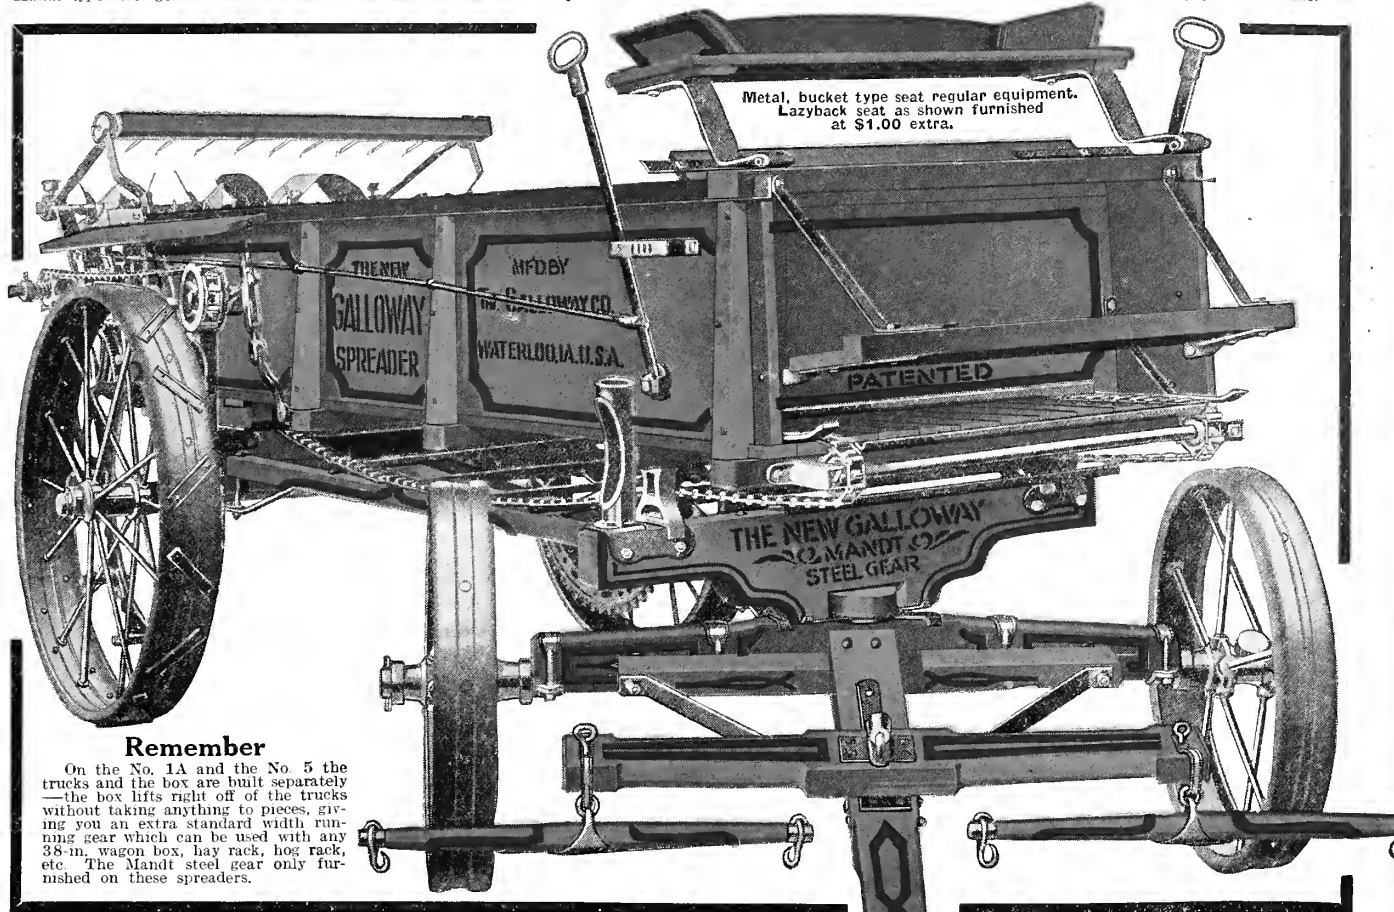

BOTH COMPLETE SPREADERS WITH BOX AND TRUCKS BUILT SO YOU CAN LIFT BOX OFF AND USE TRUCKS ALONE

No. 1A--50-Bushel Size

This spreader is the ideal machine for the medium sized or small farm. It is specially adapted for top dressing crops. It is a complete machine, including tongue, neck yoke and doubletrees. The total width of the No. 1A is only 5 ft. 10 in.—different from the No. 5 in width only—which makes it a handier machine on many farms because you can drive it through any gate or back into any barn door or up close to the fence corners. It is just as complete a machine as any we build, being smaller in size and capacity and having the detachable feature. It runs so easily that any team can handle it even on rough and hilly land—in fact, it is specially suited for rough hillside use. Both the No. 1A and No. 5 Detachable Box Spreaders are completely equipped with the Alemite lubrication fittings. The front wheels cut under, permitting a short turn. Only the Mandt type steel gear as shown furnished on these detachable box spreaders.

No. 5--60-Bushel Size

The main feature of the No. 5 Spreader, like our No. 1A, is the fact that it has box detachable from the trucks. You can lift the box right off and use the trucks for a standard width hay rack, wagon box or any other use on your farm. You can set the box back on again any time you want to use a manure spreader—nothing to assemble or take to pieces, you don't even have to take out a single bolt. The No. 5 is a complete machine in every respect but the box is wider and it has a larger capacity than the No. 1A. The No. 5 spreader is only 48 inches high from ground to the top of box at the center—it is easy to load, easy to pull and does a perfect spreading job. Extreme width 78 inches. Goes through a door or gate 6 ft. 8 in. wide. If you want an efficient, large capacity, complete spreader with all special Galloway patented features, and would like to have the use of an extra wagon truck on your farm, then this No. 5 is the best buy you can make.

Remember

On the No. 1A and the No. 5 the trucks and the box are built separately—the box lifts right off of the trucks without taking anything to pieces, giving you an extra standard width running gear which can be used with any 38-in. wagon box, hay rack, hog rack, etc. The Mandt steel gear only furnished on these spreaders.

Read These Letters

"The No. 5 Spreader that I bought from you in 1909 has given very good satisfaction and is still in use on our farm. Up until the present time this machine has only cost us \$1.50 for repairs, and the spreader has done a lot of work." It has hauled on an average of from 200 to 250 loads each year."

Albert Olson, Dassell, Minnesota.

"The No. 5 Spreader that I bought from you in 1913 has done wonderful work for us. We have only spent 60 cents on repairs up to the present time, and we have hauled out approximately between 350 and 400 loads of manure each year, since we have had the machine. It is doing just as good work as other machines around us that cost twice as much."

Fred F. Hostetler, Barris Mills, Ohio.

"The No. 5 Spreader that we bought from you in 1914 has proved a wonderful machine. I figure that this spreader has handled about 400 loads a year, and has done a good job of spreading every season. I consider this wonderful service from a spreader."

D. E. Ingalls, Charlevoix, Michigan.

"I have one of your No. 5 Spreaders purchased ten years ago, hauling about 50 loads a year, also using the truck when filling silos and hauling fodder. It has only cost me 50 cents for repairs so far."

John Stadtlander, Harrison, Ohio.

Specifications

Height—48 inches to top of box at center.

Width Track—5 feet 6 inches. Front wheels 26 inches high and rear wheels 40 inches high with continuous cleats. 5 1/2-inch flanged and grooved tire.

Lubrication—Alemite Zerk Pressure System to every working part.

Seat—Metal bucket type seat regular equipment—wide reversible wood seat as shown furnished at \$1.00 extra.

Beater and Feed Mechanism—All steel standard Galloway construction, same as on No. 8 Spreader.

No. 5 Box—45 inches wide, 17 inches deep, 120 inches long. Extreme width of machine 78 inches. Capacity 60 to 70 bushels. Weight 1,450 pounds.

No. 1A Box—38 inches wide, 17 inches deep, 120 inches long. Extreme width of machine 70 inches. Capacity 50 to 60 bushels. Weight 1,350 pounds.

GALLOWAYS' NEW

Improved Low-Down No. 8 Spreader

Big Capacity Two-Horse Spreader

This big, Low Down No. 8 is our most popular machine. It is a solid one-piece spreader—box is built solid to the trucks after our special design which makes it extremely low down and gives it a sturdy construction that will withstand rough treatment and years of hard usage. It has a capacity of 60 to 70 bushels which is as big as is practical for a two-horse spreader.

The outstanding features of this machine are its perfect, even spreading up hill or down, its ease of loading and its light draft. There is no bigger spreader on the market—and none that pulls easier. The draw pin on the tongue is only 9½ feet from the rear axle which carries 60 per cent of the load. This close hitch and extra weight on the rear end, together with the correct slope of the box, moves a big load back gradually to the beater where it is finely pulverized and evenly spread without overworking your team.

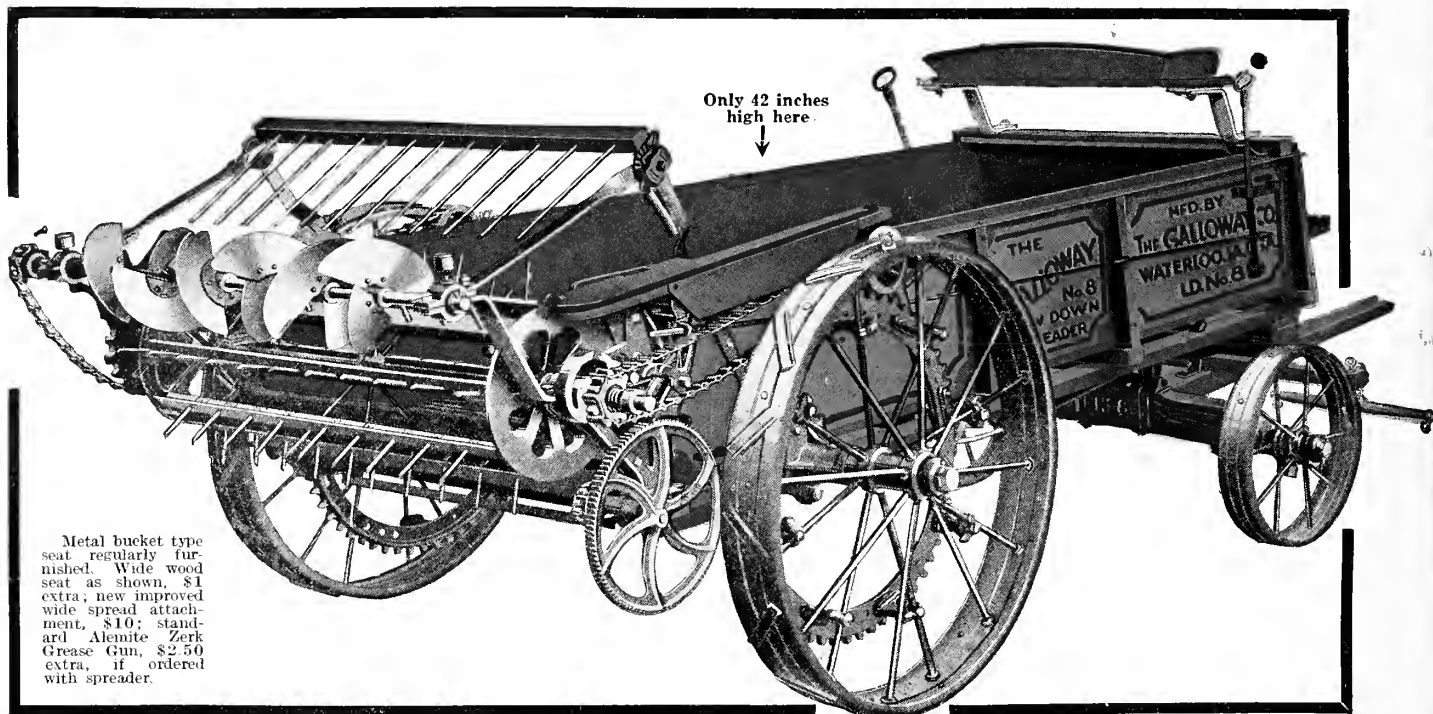

This No. 8 is only 42 inches high from the ground to top of box at center. This low lift takes a lot of the work out of loading—it saves your back. Beater runs close to the ground. This gives a fine even coat of manure in spite of the wind. The spreading is easily regulated by the lever at the driver's seat—from 4 to 24 loads per acre.

Has Best and Latest Features

The new improved Galloway No. 8 is not only a well balanced machine in every detail, but it is the latest model—the most up-to-date spreader on the market today.

It is equipped with Alemite Zerk lubrication so that greasing is a short, easy job—this pressure system forces the grease into every working part which makes the machine work easily, smoothly and wear longer.

On the No. 8 Model you have your choice of the Galloway Standard Wagon Type Front Truck which cuts under the frame and gives a square turn, or our new Non-Whip Auto Type Truck, specially designed to keep both front wheels and tongue parallel at all times so you get a square turn with no skidding. Our patented force feed board forces the last fork full of the load to the beater which thoroughly pulverizes and shreds the manure so that it spreads evenly. Applying the power from both rear wheels to both ends of the beater shaft by means of our patented differential, operates the conveyor easily, the feed mechanism perfectly and the beater continuously without any pulling or twisting strains on the machinery. This spreader will work perfectly, even on the hilliest, roughest land and with less resistance on the farm, his team and the spreader itself than any other machine on the market.

Metal bucket type seat regularly furnished. Wide wood seat as shown, \$1 extra; new improved wide spread attachment, \$10; standard Alemite Zerk Grease Gun, \$2.50 extra, if ordered with spreader.

Freight Estimates

We ship spreaders knocked down so they will go at the low third class freight rate. Shipment from our nearest warehouse point saves you transportation cost. Shipping weight on the No. 8 Spreader is 1600 lbs. and we can send it to Pittsburgh, Pa., 750 miles, for \$11.28; to Wadena, Minn., 240 miles for \$9.12; to Davenport, Iowa, 128 miles, for \$4.40. You can estimate the freight to your station or we will gladly tell you the exact amount upon request.

Specifications on No. 8

Height—42 inches to top of box at center.

Width track—5 feet 6 inches. The front and rear wheels track with our new Non-Whip Front Trucks—but not with our standard Wagon type Front Trucks.

Wheels—Front, 23 ½ inches high—rear 40 inches high, 5 ½ inches flanged and grooved tires, continuous cleats on rear wheels.

Box—45 inches wide, 17 inches deep, 120 inches long. Solid bottom, reinforced side panels with angle steel top rail. Painted two coats and varnished inside and out.

Lubrication—Alemite Zerk Pressure System to every working part. Grease gun furnished as additional equipment if you do not have one.

Beater—All steel, eight bars with steel teeth riveted in.

Seat—Metal bucket type seat regularly furnished but wide wood lazy back seat sent for \$1.00 extra.

Feeds—Lever handy to driver's seat regulates feed from 4 to 24 loads per acre.

Front trucks—Your choice of New Non-Whip Auto Steer Type or regular all steel Wagon Type at same price.

Comes complete—Price includes tongue, doubletrees and neekyoke.

Shipping weight—1600 lbs.; shipped knocked down to take low third class rate.

Recommended by Owners

"Your No. 8 Spreader works fine. It is the lightest draft Spreader I ever saw; two horses handle it easily. I saved \$32.40 by buying from you."

John Sanders, Sisseton, S. D.

"I received the No. 8 Low Down Spreader. It surely is a dandy. I consider it the best investment on my farm. Not only did I save \$25.00 but I like it much better than others I see about me."

A. G. Beinke, Harper, Iowa.

"My Galloway Spreader was certainly a wonderful buy for me. It has spread right around 4,000 loads of manure and is still going."

Curtis D. Foster, Illinois City, Ill.

"The spreader I purchased from you is the easiest running one in this country, or that I ever saw. My team takes it anywhere on my farm which is quite hilly."

Jesse J. Palmer, Goodhart, Mich.

30 Days' Trial

Every Galloway Spreader is guaranteed to be satisfactory in every respect and is sold on a 30-day trial basis. After you have used the machine 30 days, if you do not think it is the best buy you can make for the money, you do not have to keep it. If you return it, we will refund any settlement you have made and pay the freight both ways.

A GOLDMINE ON EVERY FARM

The Gold Rush of '49!

You have heard of the gold rush to California in 1849—people went wild with excitement and hundreds started West in search of gold. Many starved to death, many were killed by bandits and Indians. People went in covered wagons, on horseback and even on foot—any way to get there.

What was all this mad rush for?

Just gold which was sold for money—just exactly the same kind of money that you get today if you sell a load of grain, corn, hogs, cattle, dairy products, fruit, hay or anything produced on your farm. Every farmer gets his gold or money out of the soil. There is literally a gold mine on every farm.

LISTEN—The money you get from your crop is just the same as the money a miner gets for gold nuggets. The question is—how can your crop be increased—how can you get into a richer streak of pay dirt?

HOW?—By using a Galloway Manure Spreader. This will positively and absolutely increase your yield. Others are getting increases of from 30% to 50% on corn, cotton, grains, alfalfa and other crops from the same land by spreading manure properly with a good spreader.

What others are doing, you can do.

A Good Spreader Is a Paying Investment

Letting your land run down not only decreases productive value but also takes many dollars off its sale price. Many farmers actually **BUILD UP** the soil by guarding their manure crop and spreading it properly with a good machine. Any good manure spreader is not an expense but a money-making investment—it will pay for itself every year and a profit besides if you have 100 loads or more to haul.

Make up your mind today to get the benefit of your manure crop—to have a good spreader and to get your share of prosperity. Decide today to buy a Galloway Spreader and you will never regret it as long as you till the soil.

LIFETIME GUARANTEE on Spreaders

The same written lifetime guarantee goes to every spreader purchaser the same as on other machines which we manufacture. So long as you use our spreader—any time during its life—we will replace free of charge at our factories any part which breaks on account of defective material or workmanship. Our written guarantee as pictured here goes with every spreader we sell. You will probably never need to take advantage of it—but you have it if you need it—and it's more than you can get with spreaders of other makes.

Try It 30 Days--Then Keep It or Not--As You Please

The way to tell whether you like a machine or not is to use it. Order the Galloway Spreader on trial, use it on your own farm for 30 days and if at any time during this trial period you would rather have your money back, return the machine and we will refund any settlement you have made and pay the freight both ways. Some dealers say "See the goods before you buy." We say "See them and use them." A Galloway Spreader has to make good or it's no sale.

Prices and Payment Plans on Spreaders

Prices quoted do not include the whirlwind wide-spread attachment, wide wood seat or Alemite Zerk gun. Wide-Spread Attachment, \$10.00; wide wood seat, \$1.00 extra; Alemite Zerk grease gun, \$2.50 extra, if ordered with Spreader. Our New Wide-Spread Attachment will fit on any spreader. You can buy it at the time you purchase the machine or later on, as you wish.

4 BRIDAL WREATH \$1
1 year field grown—good hardy plants. Postpaid.

PEONIES BEAUTIFY ANY HOME LOT

(By parcel post, add 5c each for packing and postage.)

MARIE LEMOINE—Bloom is enormous, very compact, rose type, color a beautiful sulphur white with occasional carmine tip. Most pleasing fragrance. Each, 80c.

LOUIS VAN HOUTTE—Brilliant crimson, with exquisite fragrance. Semi-double. Each, 75c.

ACHILLE—Large, rose type. Opens light pearl or shell pink, finishing delicate bluish. Lovely. Each, 80c.

FOR LOVERS OF COLOR AND BEAUTY IN ROSES

(If Roses are desired by parcel post, add 5c each for packing and postage.)
Roses are the oldest and best loved flowers in existence. Plants should be trimmed back considerably when planted, and should be set in good, rich, well-drained soil where they will receive plenty of sunshine.

HYBRID PERPETUAL ROSES

Strong, field-grown, 2-year plants, 50c each; 3 for \$1.40; 10 for \$4.35.

FRAU KARL DRUSCHKI—Large white rose; very popular.

ULRICH BRUNNER—Cherry red. Immense size; fine form.

GENERAL JACQUEMINOT—Brilliant scarlet crimson, very large and full.

PAUL NEYRON—Deep rose color. Largest variety in cultivation.

HYBRID TEA ROSES

Strong, field-grown, 2-year plants, 75c each; 3 for \$2.45; 10 for \$6.50.

RED RADIANCE—Lovely rich red, long pointed buds. Ideal garden rose.

K. A. VICTORIA—The finest of all white Hybrid Teas.

LUXEMBOURG—Rich bronze-yellow, delightfully fragrant.

COLUMBIA—Beautifully formed buds of a lively pink deepening as the bloom matures. Exquisite.

GRUSS AN TEPLITZ—Fiery red, fine free bloomer. Should be in every garden.

COMMON CLIMBING ROSES

Strong, field-grown, 2-year plants, 35c each; 3 for \$1.00; 10 for \$3.00.

Choice of Crimson Rambler (bright red), Dorothy Perkins (shell pink), Excelsa (deep crimson), or White Rambler (pure white). All have double miniature flowers borne in clusters. Hardly, lovely.

SELECT CLIMBING ROSES

Strong, field-grown, 2-year plants, 50c each; 3 for \$1.40; 10 for \$4.00.

PAUL'S SCARLET CLIMBER—The most gorgeous red imaginable. Strong, vigorous grower; a universal favorite.

CLIMBING AMERICAN BEAUTY—Large blossoms of deep pinkish crimson; delightfully fragrant. Abundant bloomer.

GARDENIA—A climbing yellow rose of rare charm. Strong grower; free bloomer.

BABY RAMBLERS (Everyblooming)

Strong, field-grown, 2-year plants, 65c each; 3 for \$1.75.

CRIMSON BABY RAMBLER—Beautiful crimson color.

BABY ORLEANS—Geranium-red blossoms with white centers.

GALLOWAYS' SELECT, HARDY PHLOX

No perennial border or flower garden is complete now-a-days without a generous supply of Perennial Phlox. Their showy blossoms are borne in great profusion and retain their superb coloring for a long period of time. Plant in good, rich, well-drained soil. A light covering of straw manure or other coarse litter gives sufficient winter protection. You can never plant too many phlox. We offer only the choicest varieties.

MRS. JENKINS—Large, pure white. Early.

ENCHANTRESS—Bright salmon pink, with a dark red eye. Delightful.

LOTHAIR—Bright crimson. Very showy.

MRS. CHAS. DORR—A beautiful shade of lavender.

Prices on above named Phlox: 20c each; 3 for 55c; 6 for \$1.00. (By parcel post add 5c for 3; 10c for 6; or 15c for 12 Phlox to cover packing and postage.)

BEAUTIFUL IRIS—THEIR EARLY FLOWERS ARE UNEQUALED

Exquisite colorings, delicate fragrance, artistic manner, and absolute hardiness make the German Iris one of the most popular and desirable of all flowers. Plant about 12 inches apart, barely covering the roots with soil. The varieties we are offering are very desirable.

PERFECTION—Standards light blue, falls dark velvety violet-black, with orange beards. Handsome.

FLAVESCENS—Delicate soft yellow; large sweet-scented flowers.

SILVER KING—Creamy white, faintly flushed lavender. Fragrant and lovely.

Prices on the above named Iris: 20c each; 10 for \$1.50; 20 for \$2.50. (If desired by parcel post, add 10c for 10 or 15c for 20 Iris, to cover packing and postage.)

OUR EXTRA CHOICE, NAMED GLADIOLUS

(By parcel post, add 5c for 10 bulbs, 10c for 25, or 15c for 50, to cover packing and postage.)

We have made a specialty of the very best true-to-name Gladioli. We offer only a few of these very best, outstanding varieties—the ones that will please you most. Gladioli are easy to grow in almost any kind of soil. Plant five to six inches deep, small bulbs three inches deep. No fresh manure should come in contact with bulbs. Plant when ground is warm. In the fall they must be dug, dried and stored before the ground freezes. Good, blooming size bulbs only.

WHITE

HELEN FRANKLIN—Lovely, ruffled white Gladioli, with delicate pinkish-violet markings on lower petals. 5c each; 10 for 40c; 25 for 90c.

SCARLET AND RED

E. J. SHAYLOR—Gorgeous flame color suffused with rose. Ruffled and showy. 10c each; 10 for 85c; 25 for \$1.75.

CRACKER JACK—Dark rich maroon, with darker maroon and yellow markings on lower petals. An old favorite. 5c each; 10 for 45c; 25 for \$1.00.

ORANGE AND YELLOW

ALICE TIPLADY—Flowers large and of a striking orange color. One of the best Primulinus. 5c each; 10 for 45c; 25 for \$1.00.

SCHWABEN—Immense flowers of clear creamy yellow, shading to sulphur. 15c each; 10 for \$1.00; 25 for \$2.25.

PINK AND ROSE

ROSE GLORY—Very large flowers of a melting rose-pink, charmingly ruffled. 7c each; 10 for 55c; 25 for \$1.10.

MRS. FRANK PENDLETON—Lovely light pink with a rich maroon blotch on lower petals. Spectacular. 8c each; 10 for 70c; 25 for \$1.25.

LE MARECHAL FOCH—Extremely large flowers of an exquisite delicate pink. Extremely valuable for cut flowers. 5c each; 10 for 45c; 25 for \$1.00.

LAVENDER AND PURPLE

MARY FENNEL—Exquisite pinkish lavender flower on tall spike; soft primrose yellow throat. Choice. 15c each; 10 for \$1.00; 25 for \$2.25.

HERADA—Extremely large blooms of clear glistering lilac, or mauve; deep markings in throat. 15c each; 10 for \$1.00; 25 for \$2.25.

ANNA EBERIUS—A sensation and prize winner, with its rich velvety, pansy-purple blooms. 10c each; 10 for 80c; 25 for \$1.55.

20 Red or Black Raspberries. Fine varieties, \$1.80 Mixed Perennial Phlox, gay varieties, 8 for \$1.00.

4 Rambler Roses—Dor. Perkins, Crimson Rambler, Excelsa and White Rambler. 4 for \$1.00.

12 Concord Grapes 2 yr. Best Black Grape, Real Bargain 12 for \$1.00. 18 Mixed Iris. Best large blooming, 18 for \$1.00.

1 Colorado Blue Spruce Transplant, 8-12 in. high—the most popular of all ornamental evergreens. ONLY \$1.00, postpaid.

50 Gladioli Mixed, 3 year size, for \$1.00. 15 Blackberries, \$1.00.

Flowering Shrubs

That Please the Eye and Increase the Value of Your Property

We are offering a special list of the best selected ornamental shrubs—just the kind that every home needs most and should have. These are the kind that grow the best and give you the most satisfaction and pleasure. These flowering shrubs and plants form an artistic setting for your home—will give you a wealth of flowers and greatly add to the value of your property.

BECHTEL'S FLOWERING CRAB—A delightful blooming dwarf tree. In May or early June it is fairly covered with miniature rose-like pink blossoms of fine fragrance. 2-3 ft. trees, \$1.65 each.

TARTARIAN HONEYSUCKLE (Pink or White)—Very hardy, and will grow 8 to 10 ft. high if untrimmed. Covered with pretty flowers about Decoration Day, followed by artistic orange and red berries in summer and fall. Good in any soil. Cannot be surpassed for backgrounds and for fall foliage.

	Each	10
2 yr., field grown plants.....	\$0.50	\$4.50
3 yr., No. 1 plants.....	.75	5.50

FLOWERING ALMOND—Earliest spring blossoming shrub. Very double pink or white flowers literally cover the plant; exceedingly attractive. No. 1 plants, 90c each; 10 for \$8.50.

SNOWBALL (Common)—Old-time favorite. The handsome showy flowers appear in numerous, compact balls in the Spring. Very hardy and popular.

18-24-in. plants.....Each, \$0.80; 10 for \$7.00

SYRINGA (Mock Orange)—A tall, vigorous, and hardy bush. In May and June it bears profuse white flowers resembling orange blossoms, exquisitely fragrant. Fine for backgrounds and screens.

No. 1, field-grown plants.....Each, \$0.50; 10 for \$4.00

WEIGELA ROSEA—An elegant shrub that is exceedingly popular. Covered with fine, rose colored flowers in June; These blooms are large, showy and somewhat bell-shaped. Hardy; spreading, bushy habits.

18-24-inch plants.....Each, \$0.60; 10 for \$5.50

HYDRANGEA PANICULATA GRANDIFLORA—Best and grandest shrub for landscape purposes for fall bloom. Enormous globe-shaped panicles, white in color becoming tinged with delicate pink at first frost. Lasts for weeks after opening up. Hardy. Blooms in September and October when other flowers are scarce.

	Each	10
2 yr., field-grown plants.....	\$0.50	\$4.50
Extra heavy specimens.....	1.00	9.00

TREE HYDRANGEA P. G.—Same as Hydrangea P. G., only grows on stems; dwarf tree form. When fully grown, 5 feet high. Very showy. With well-shaped heads, \$1.75 each.

DWARF DEUTZIA—Dwarf growing plant, fine for foreground work. Artistic pure white flowers borne in small racemes. Plant in somewhat sheltered position.

2 yr., No. 1.....Each \$0.75; 10 for \$6.50

GOLDEN ELDER—Startling golden yellow tinged foliage, giving rich contrast to other shrubs. Quick growing and hardy.

	Each	10
1 yr., field-grown.....	\$0.25	\$2.00
Large, 4 yr. specimens.....	.65	6.00

LILAC

The old-fashioned variety; hardy. Large clusters of deliciously fragrant blossoms. A general favorite; sure bloomer. No home complete without them. Your choice of Purple, White or Persian Purple.

	Each	10
No. 1 plants.....	\$0.75	\$6.50

Large two-year-old tubers, 20c each, 4 for 50c, 20 for \$1.50.

SPIREA VAN HOUTTEI

Small Fruits to Complete Your Garden

Grapes! Grapes!!

Old as history, and still one of the most popular in existence. Its savory qualities make it fine for eating raw, canning, jelly, wines, and many other things. Supply in United States not nearly enough to go around. Many growers make from \$200 to \$1,000 per acre. They do well in any good growing soil, and will bring big returns for the small amount expended. And there is nothing quite so beautiful as a grape arbor; besides, it is a real source of profit. We are making a specialty of grapes this year—extra strong, well rooted plants at low bargain prices that will enable you to buy in quantities.

CONCORD—Most popular black grape grown. Large, round, very productive, sweet flavor. Hardy and well adapted almost everywhere. No. 1, 2-year plants, 12c each; 12 for \$1.00; 100 for \$6.00; 200 or more at \$5.50 per 100.

AGAWAM—Best variety of red grape; bunch small and compact, berry good sized, flesh tender and juicy, exceedingly rich and sweet. Hardy grower. Strong, selected 2-year plants, 25c each; 10 for \$2.25; 100 for \$18.00.

MOORE'S EARLY—Large grape, fine quality, ripens two weeks earlier than Concord. Good grower, good yielder, and hardy. Delicious flavor. 2-year, No. 1 plants, 20c each; 10 for \$1.50; 100 for \$13.50; 200 or more at \$12.00 per 100.

NIAGARA—The hardiest white grape grown. Bunches large with good sized berries, pale yellow in color. Flavor sweet and pleasant. 2-year, No. 1, 20c each; 10 for \$1.50; 100 for \$12.00; 200 or more at \$10.00 per 100.

(If grapes are desired by parcel post, add 10c to the ten rate and 50c to the 100 rate to cover cost of packing and postage.)

Gooseberries

Need No Introduction. Welcome on every table.

HOUGHTON—Old well-known variety. Pale red, sweet and good. Each, 20c; 10 for \$1.75; 25 for \$3.75.

DOWNING—One of the very best, very large, flesh whitish green. No. 1 plants. Each, 30c; 12 for \$2.75; 25 for \$5.00.

Currants

We offer two of the very best. Every garden should have a dozen or more currant bushes. Strong 1-year-old plants. Each, 20c; 12 for \$1.60; 25 for \$3.00.

FAY'S PROLIFIC—Very productive, also large; extra good flavor.

CHERRY—Largest of all currants. Some one-half inch in diameter.

Blackberries

ELDORADO—The finest of all blackberries. Berries jet black, sweet, large, and of very inviting flavor. Good keepers; good shippers; heavy producers.

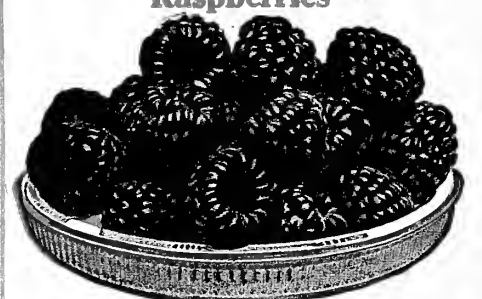

Postpaid prices, 12 for 85c; 25 for \$1.25; 50 for \$2.75. Customer pays express, 100 for \$4.75; 1,000 for \$42.50.

Dewberries

LUCRETIA—Sometimes called trailing berry; very hardy and productive; fruit highest quality, large, sometimes 2 inches in diameter. Two weeks earlier than blackberries. Sells good on market.

Postpaid prices, 12 for 75c; 25 for \$1.25. Customer pays express, 50 for \$2.25; 100 for \$4.00; 1,000 for \$35.00.

Raspberries

THE FINEST OF THE TESTED VARIETIES

ST. REGIS (Everbearing)—Red. Remarkable red berry, which will yield fruit first season. Though not large, berries are of excellent quality and firm. Ripens early, plant hardy, excellent canner.

CUTHBERT or QUEEN OF THE MARKET—Red. Remarkably strong and hardy. Stands northern winters and southern summers; equal to any; very large, rich crimson color, excellent quality. Good shipper.

CUMBERLAND—Black. Largest of all black caps; firm, fine shipper, profitable for market; healthy, vigorous grower, perfectly hardy. Fruit nearly 1 inch across; very prolific yielder.

Postpaid, 12 for 65c; 25 for \$1.20; 50 for \$2.30. Customer pays express, 100 for \$4.00; 1,000 for \$35.00.

ABOVE PRICES ON ALL RASPBERRIES

STRAWBERRIES!!

SENATOR DUNLAP—The finest of all spring-bearing strawberries. Fruit extremely large, rich red color, and of superfine quality and flavor. Fruit firm; splendid keeper and shipper. Heavy producer. You will make no mistake in planting the Dunlap.

Postpaid prices, 50 for 75c; 100 for \$1.10.

Purchaser pays express, 100 for \$1.00; 500 for \$4.25; 1,000 for \$7.50.

DR. BURRILL—This is the famous million-dollar strawberry. Fruit very large, dark red; berry stands shipping unusually well. Starts bearing a little later than the Dunlap.

Postpaid prices, 50 for 75c; 100 for \$1.10.

Purchaser pays express, 100 for \$1.00; 500 for \$4.25; 1,000 for \$7.50.

PROGRESSIVE EVERBEARING—Considered the best Everbearer on the market until the advent of the Mastodon. Strong and absolutely hardy. Highest quality, bright red, fine keeping berry. Good producer. Keep blossoms and runners pinched off the year you plant them until last of July. Plants will then be in shape to bear a good fall crop.

Postpaid prices, 50 for \$1.25; 100 for \$2.10.

Purchaser pays express, 100 for \$2.00; 500 for \$6.75; 1,000 for \$12.50.

Mastodon Strawberry

Wonderful, Newly Developed Strain. Get the Genuine, Nationally Advertised Mastodon. Here It Is.

MASTODON—The wonderful new Everbearing Strawberry. Enough cannot be said for it. Under ordinary field culture it has produced at the rate of 350 16-quart crates per acre the same year it was planted. Its great size and luscious flavor are greatly in its favor on the market. It will bring far better prices than the older everbearers because of its beauty and enormous size. It is unapproachable; you should start your Mastodon bed at once—it will reap fine profits for you.

Postpaid prices, 25 for \$1.00; 50 for \$1.75; 100 for \$3.25.

Purchaser pays express, 100 for \$3.15; 250 for \$6.50; 500 for \$12.00.

An Old Proverb "An Apple a Day Keeps the Doctor Away"

Apples are the nation's fruit. Plant an apple orchard, fill up vacant places around your house or yard, in the corner by the house or roadside, anywhere. There is enough waste space in America to raise millions of dollars worth of good apples. It's as easy to raise a good apple as a poor one. Raise the kind that sell for 5, 10 and 15 cents each. The decrease in raising apples since 1910 is over 23 per cent, and yet the population is increasing. What does it mean? It means that the man who has apple trees of the right kind has property that will earn enormous dividends.

Late Winter Apples

DELICIOUS—No other apple like them. Beautiful red with pin dots of yellow and traces of blended golden green, fine grain, crisp, juicy, sweet. Will not make the teeth sore, late keeper. A wonderful apple success. Be sure and include a few Delicious trees in your nursery order.

MCINTOSH RED—There never has been enough of this variety to go around. Trees are most hardy and cold resistant, makes them dependable for cold climates. Trees are large, well shaped, easily managed, will not break under strain of snow, sleet, wind or heavy crops. Wonderful tender skin, juicy, hardy, bears well regularly, good size fall and winter apple. It will pay you to include ten or more of these trees with your order.

STAYMAN'S WINESAP—Larger and juicier than the common Winesap, and a great favorite with apple growers. Rich, dark red color. Good producer and keeper.

N. W. GREENING—Best and hardiest Greening. Fruit large, greenish yellow, firm and fine grained. Very hardy and productive and splendid keeper.

TOLMAN SWEET—Large sweet apple of fine flavor. Hardy.

WINESAP—One of the best little apples grown. Red, flesh firm with a rich, rather acid flavor. Keeps through winter.

GANO—Fruit is bright red on yellow ground, large and oblong. Fine keeper.

GRIMES GOLDEN—Extremely popular. Fruit medium to large, yellow veins, russeted; flesh yellow, firm, very fine grained, juicy flavor. Rich quality. Fine for market and home.

JONATHAN—A general favorite everywhere. Bright red, quality of the finest, flavor of the best. Flesh tender and crisp. A wonderful seller.

BEN DAVIS—One of the best for market and cooking. Quality good; fruit large and round, skin yellow, splashed with red. Fine keeper.

SALOME—Fruit medium in size, rich dark red color, and of extra good quality. Crisp, juicy flesh. The finest winter apple for the north.

ROMAN STEM—Flesh has rich, almost pear-like flavor; tender and juicy. Medium size fruit, greenish-yellow color. Good keeper.

Fall and Early Winter Apples

WEALTHY—One of the best and finest apples grown. Very hardy, growing and bearing well almost anywhere. Medium to large in size, round in shape, color a rich red overlaid on yellow. Juicy and fine flavored. Early and extremely abundant bearer.

WOLF RIVER—Very large, skin splashed and streaked with red; flesh white and coarse.

FAMEUSE (Snow Apple)—Pure white flesh contrasting beautifully with its deep crimson skin. Excellent quality.

MAIDEN BLUSH—Reddish tinge on light yellow skin; flesh white and tender.

Summer Apples

EARLY HARVEST—An excellent yellow apple, with tender, juicy flesh. Good bearer.

RED JUNE—An abundant bearer; apples rich red and fine flavored.

RED ASTRACHAN—Fruit good size and dark red. Very productive. Best early red apple for the north.

YELLOW TRANSPARENT—Very hardy, fine for almost any climate; fruit medium size, and of very superior quality. Best of the summer yellow apples.

DUCHESS OF OLDENBURG—An old favorite. Fruit round, large, streaked red and yellow. Flesh tender, juicy and pleasant. Early and abundant bearer.

LIVELAND—Fruit medium size, shaded red; flesh fine, tender and juicy.

Crab Apples

HYSLOP—Fruit large, skin smooth, color dark rich red on yellow ground; flavor very good. Commands high market prices.

TRANSCENDENT—Fruit large and round; skin smooth, rich yellow shaded with red; very juicy, acid. Fine for jelly and pickles.

WHITNEY—One of the best crab apples, and extremely popular for pickles. Fruit large, skin smooth and splashed with carmine. Fine flavor.

Cherries - Plums - Peaches - Pears

Cherries

Needed in every home planting. Put in as fillers. Our trees are extra fine.

MONTMORENCY—Early, red, large, best Montmorency strain, very attractive. Rich acid flavor; late June.

EARLY RICHMOND—Excellent for cooking, medium size, red, juicy, fine acid flavor. Hardy.

Prices on above cherry trees: 3-4 ft., No. 1 trees, 50c each; 10 for \$4.25; 100 for \$37.50; by express.

Native Plums

DAISY—Best all American plum, extremely large, purplish red, hardy, firm flesh of finest flavor.

WYANT—Large conical plum, dark red color, thick skin, firm, freestone. Hardy.

WOLF—Fruit large, quality excellent. Superb for cooking and for serving fresh with sugar.

Prices on above plum trees: 4-5 ft. average, 55c each; 10 for \$5.00; 100 for \$45.00; by express.

Hansen's Plums

HANSKA—One of the famous Hansen's plums, extremely large, bright red color, with fine apricot flavor. A great producer. Hardy.

SAPA—Rich purple color. Fruit large, fine quality. A prize winner. Hardy.

WANETA—Prof. Hansen's masterpiece in plums. Enormous size, splendid producer, extremely hardy, and of wonderful flavor.

Prices on above Hansen's Plum Trees: 4-5 ft. average, 65c each; 10 for \$6.00; 100 for \$50.00; by express.

Peaches

It is a pleasure to grow peaches. In the right climate nothing brings returns more quickly. Easily cultivated, enormous demand. Try a few. Can furnish best varieties—your choice of Alexander, Elberta, Crawford's Early, Crawford's Late, or J. H. Hale.

Prices on Peach Trees: 4 ft. average, 45c each; 10 for \$4.00; by express.

Pears

Big profits in pears in the pear climate. Can be grown on almost any kind of soil that has drainage. We list only best varieties—Kieffer, Bartlett, Seckel.

Prices on Pear Trees: 4 ft. average, 60c each; 10 for \$5.25; by express.

100 Norway Spruce

12-18 in. size—twice transplanted.
Special picking of nice heavy stock

\$13.65 Postpaid

This is the best windbreak bargain offer we ever made.

Galloways' Hardy Evergreens

We have some wonderful new varieties this year. There is an ever-increasing demand for beautiful evergreen trees. Nothing equals the Norway Spruce for windbreaks. They make best protection against icy cold wintry winds for feed yards, barns and dwellings.

Our ornamental evergreens will add a lot of actual cash value to your property—it will pay you to plant hedges, foundation groups and ornamental evergreens in your yard.

TRANSPLANTING DIRECTIONS—Plant seedlings or small transplanted evergreens at once. Do not expose roots to air or sun. Mud the roots thoroughly in thick puddle. Set deeply and firmly. Cultivate often like cabbage plants. Shade seedlings first two years for half time; then transplant to permanent location.

Norway Spruce

The Most Popular Evergreen in Existence for Windbreaks, and One of the Finest for Ornamental Planting. The Norway Spruce well deserves its widespread popularity, for it makes a most beautiful windbreak or shelter belt, and with its compact, heavy growth clear to the ground, provides a complete shelter to the buildings and grounds back of it. Its foliage is a lovely dark green; needles short and stiff. It is a symmetrical grower somewhat pyramidal in form, and unusually compact. It thrives in a great variety of soils, and is hardy almost anywhere. The graceful, symmetrical, tapering form, and abundant green foliage of the Norway Spruce make it so desirable for ornamental work.

	10	50
8-12 in., once transplanted.....	\$1.50	\$ 7.10
12-18 in., twice transplanted.....	2.25	7.95
18-24 in., twice transplanted.....	3.50	14.00

(Trees up to 18 in. by parcel post, add 25c for 10 trees or 45c for 50 trees. Larger than 18 in. should go by express.)

Colorado Spruce

This magnificent evergreen has silver bluish tints in the summer when the new growth starts. Foliage heavy, needles short and stiff. Grows symmetrical and graceful. The new growth of this desirable landscape tree brings out and renews the silver luster of any Colorado Spruce. As it grows older the bluish tint becomes more in evidence.

	Each
6-8 in. transplants	\$.90
8-12 in. transplants	1.25

(If desired by parcel post add 5c per tree.)

Douglas Fir

A majestic and lovely evergreen, its foliage as well as its form being somewhat characteristic of both the Spruce and Fir trees, acquiring the beauty of each. Strong, sturdy, upright grower. Foliage soft green color, branches long and graceful. Hardy, and will adapt itself to almost any part of the country.

	Each	10	100
6-8 in.	\$.35	\$2.50	\$20.00
8-10 in.45	3.50	30.00

(By parcel post add 25c for 10; 50c for 50 or 65c for 100.)

Pyramidal Arbor-Vitae

That charming Arbor-Vitae that naturally assumes an artistic pyramidal form without trimming. Without doubt one of the finest for foundation groups and formal planting. Has the beautiful lacy foliage of the American Arbor-Vitae. Hardy.

	Each	10
8-12 in., once transplanted....	\$1.25	\$10.00
12-18 in., twice transplanted....	1.50	12.50
18-24 in., twice transplanted....	2.50	22.00

(By parcel post add 10c per tree.)

Black Hill Spruce

Bushy, compact and symmetrical—the Black Hills Spruce is always a lovely evergreen and one of the best for landscape work. Foliage is thick and heavy, and often has a bluish silvery cast. Hardy, easily transplanted, and a great favorite everywhere. It is also fine for windbreak planting on the western plains and Missouri Valley district.

	Each	10	100
6-8 in., once transplanted	\$.45	\$3.50	\$30.00

(By parcel post add 25c for 10 trees; 50c for 100 trees.)

Concolor Fir

Often called the Silver Fir, because of its shimmering, silvery color in the summer. Foliage quite long, soft and graceful. Perfectly hardy, and at maturity often reaches a height of 60 to 80 feet. In its youth it is inclined to be a little awkward, but it soon grows out of this state, and develops into one of the finest if not the most beautiful of all evergreens.

	Each	10	100
8-12 in.	\$.80	\$7.50	\$70.00

(By parcel post add 35c for 10; 65c for 100 trees.)

White Spruce

One of the most beautiful of all evergreens, and very popular for landscape planting. Resembles quite closely the Norway Spruce in appearance and form, having the short stiff needles, but foliage has a more silvery tinge. Grows fairly rapidly, and is very compact and symmetrical.

	Each	10	100
6-8 in., once transplanted	\$3.50	\$30.00	
8-10 in., once transplanted	4.50	38.00	

(If the 6-10 in. transplants are desired by parcel post, add 25c extra for 10 trees, or 50c extra for 100 trees.)

12 Full Size Packets of Select Varieties for 50 Cents

The prettiest and most popular flowers. Assortment lasts from early spring until late fall. A double set of this collection for \$1.00 will give you the most flowers and the biggest value you ever had in your life. Sent postpaid.

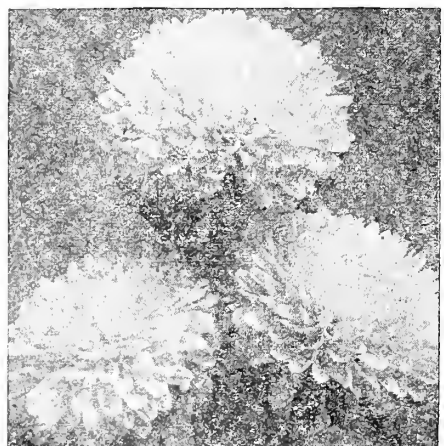

SWEET ALYSSUM (Little Gem)—Pure white for all borders. Pkt., 5c; ½ oz., 15c; ¼ oz., 25c.
BACHELOR BUTTON (Mixed)—Known to everybody. Beautiful shades. Pkt., 10c; ½ oz., 15c; ¼ oz., 25c; oz., 75c.
CALLIOPSIS (Coreopsis)—Large, mixed. New sorts. Forms bushes 10 inches high, 1 foot across. Flowers 2 inches, range from yellow to crimson. Pkt., 5c; ½ oz., 12c; ¼ oz., 20c; oz., 60c.
CANARY BIRD VINE—Easy growing, free blooming annual. Climber. For house or garden. Bright yellow flowers, resembles canary bird. Grows 10 feet. Pkt., 5c; ½ oz., 10c; ¼ oz., 15c.
CANDY TUFT—Finest mixed. Valuable for masses and edging in beds. Seeds sown in April, flowers in June. Blooms profusely. All colors. Pkt., 5c; ½ oz., 10c; ¼ oz., 15c.
COSMOS—Northern grown mixed. One of the most popular autumn annuals for tall borders and for cutting. A variety of all popular shades. Pkt., 12c; ½ oz., 25c; ¼ oz., 40c.

Asters

QUEEN OF THE MARKET ASTERS—A popular early flowering aster, and continues late in the fall. Plants of spreading habit, 1 foot high. Pkt., 10c; ½ oz., 22c; ¼ oz., 35c.

GALLOWAYS' GIANT BRANCHING ASTERS—Flowers are extra large, double, full centered, long, strong stems. Late variety. Plants 2 ½ to 3 feet high. Pkt., 10c; ½ oz., 25c; ¼ oz., 40c.

FORGET-ME-NOT—Half hardy, perennial. Flowers first year. Blooms all summer. Pkt., 10c; ½ oz., 20c; ¼ oz., 30c.

FOUR O'CLOCKS—Well-known, free-flowering favorite; many brilliant colors. Pkt., 5c; ½ oz., 10c; ¼ oz., 15c.

HOLLYHOCKS MIXED—Easy culture, flowers all fall. Pkt., 10c; ½ oz., 20c; ¼ oz., 30c.

HARDY LARKSPUR (Delphinium Belladonna)—Turquoise blue. Beautiful. Pkt., 10c; ½ oz., 30c; ¼ oz., 50c.

Nasturtiums

GIANT FLOWERING MIXED—For ease of culture, duration of bloom, brilliancy of coloring and general excellence nothing excels Nasturtiums. An assortment of the choicest varieties. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., \$1.00.

TALL OR CLIMBING VARIETY—Elegant and luxuriant climbers. Seed pods may be pickled when tender. Grow 6 to 10 feet. Pkt., 5c; oz., 15c; ¼ lb., 50c.

DWARF—Giant flowering. Brilliant colored, vigorous, of rapid growth. Flowers often 3 inches across, long stems. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., \$1.00.

HARDY GARDEN PINKS (Dianthus Semperflorens)—Mixed. Sweet scented, semi-double and single flowers. Pkt., 10c; ½ oz., 20c; ¼ oz., 35c.

AFRICAN MARIGOLD—Produces thick, double, 2 to 3-inch flowers. Golden orange. Pkt., 10c; ½ oz., 15c; ¼ oz., 25c.

FRENCH MARIGOLD—12 inches high. Plant literally covered with light brown and gold striped flowers. Pkt., 7c; ½ oz., 15c; ¼ oz., 25c.

MIGNONETTE—Mixed. Sown in April and July, will bloom steadily until November. 1 ½ inches high. Splendid for pot culture in winter. All varieties. Pkt., 7c; ½ oz., 12c; ¼ oz., 20c.

Pansies

FROST PROOF—Will successfully winter through severe climate, bloom long after frost. Flowers are very large, in a beautiful variety of colors. Mixed. Pkt., 25c; 3 pks., 85c; ½ oz., \$1.25.

GALLOWAYS' MASTODON—Immense flowers, frequently measuring 3 inches or more in diameter. Wide range of gorgeous colors. Pkt., 20c; 3 for 50c; ½ oz., 50c; ¼ oz., 90c.

AMERICAN BEDDING VARIETY—Highly prized for mass and bedding purposes. Flower frequently 3 inches across. Mixture of exquisite colors. Pkt., 7c; ½ oz., 25c; ¼ oz., 40c.

For choice named varieties, write for quotations.

Petunias, Salvia

BALCONY MIXED—A very popular type. Unusually free blooming, trailing in growth, immense single flowers. All shades. Pkt., 15c; 3 pks., 40c; ½ oz., \$1.00.

GIANTS OF CALIFORNIA—Flowers very large, single, many delightful shades. Pkt., 20c; 2 pks., 35c; 1/16 oz., \$2.00.

SALVIA—Best varieties mixed. Very satisfactory blending plants. Pkt., 10c; ½ oz., 30c; ¼ oz., 50c.
STRAW FLOWERS—"Everlasting." Large, full double, daisy-like flower. A variety of bright shades. Plant 2 to 2 ½ feet high. Pkt., 10c; ½ oz., 20c; ¼ oz., 35c.

Phlox (Flame Flower)

FINEST MIXED—Pkt., 10c; ½ oz., 50c.
DOUBLE FLOWERING, MIXED—Very choice and rare double and semi-double flowers. Pkt., 15c; ½ oz., 50c; ¼ oz., 80c.

For choice named varieties, write for quotations.

Sweet Peas

EARLY ORCHID MIXED—Flowers are of extraordinary size. Beautifully waved and usually borne four on stem. Four of the most popular varieties. Pkt., 15c; oz., 60c; ¼ lb., \$2.00.

GALLOWAYS' SPECIALLY SELECTED SPENCER MIXED—Large flowers of exquisite shape, borne in threes and fours on long, stout stems of incomparable magnificence. Pkt., 10c; oz., 35c; ¼ lb., \$1.25; lb., \$4.00.

For choice named varieties, write for quotations.

Stocks

LARGE FLOWERING TEN WEEKS—Mixed. Plants are pyramidal in growth, about 10 in. high. Very free blooming. Pkt., 10c; 1/16 oz., 40c; ½ oz., 65c ¼ oz., \$1.15.

EVENING SCENTED STOCKS—Old time sweet odored flower. Purple lilac color. Pkt., 10c; 1/16 oz., 30c; ½ oz., 50c.

GALLOWAYS' MAMMOTH FLOWERING VERBENA—Mixed. Produces large, fragrant clusters of blossoms constantly from midsummer to frost. Pkt., 10c; ½ oz., 25c.

CHINESE WOOL FLOWER—This famous novelty should be in every garden. Easy to grow, remains in bloom from July until frost. Mass of bunches wool-like flowers, glowing colors, very showy. 2 to 3 feet high. Mixed crimson, pink, yellow. Large pkt., 10c; ½ oz., 45c; ¼ oz., 85c.

WALLFLOWERS—Finest mixed. Make nice, bushy plants 1 ½ in. high. Fragrant flowers of many colors. Pkt., 15c; 2 pks., 25c; ½ oz., 40c; ¼ oz., 70c.

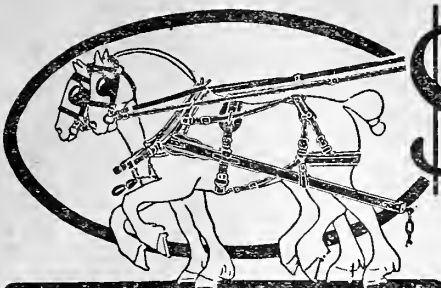

Zinnia

NEW GIANT SHOW—Huge flowers measure often in size to 6 inches across. Semi-globular and very double. Mixed colors. Pkt., 10c; ½ oz., 20c; ¼ oz., 35c.

NEW DAHLIA FLOWERED—The Dahlia flowered variety is the largest of all in Zinnias and distinguished by being nearly as deep in the center as they are wide. Pkt., 10c; ½ oz., 50c.

EXQUISITE—Light rose center deep rose. Most pleasing color in Zinnias. Pkt., 15c; 2 pks., 25c; ½ oz., 70c; ¼ oz., \$1.20.

OLD ROSE—A charming old rose shade. Very popular. Pkt., 15c; 2 pks., 25c; ½ oz., 70c; ¼ oz., \$1.20.

Breaching—2 1/4-in. single strap with 1 1/4-in. full length layer reinforced at dee; 1 1/4-in. side straps fastened into breaching dee with Conway loops; 1-in. reverse hip straps sewed into trace carriers; 1 1/2-in. plain lugs; 1-in. quarter strap to belly hand bellets; 3/4-in. lazy straps. Breast Straps—1 1/2-in. with No. 51 buckles and metal loops, slides and snaps. Martingales—1 1/2-in. with No. 400 buckles. Collar Straps—3/4-in. with metal loops. No Tie Straps. "Little Giant" Padless Harness, shipping weight, 68 pounds.

No. 3C912 \$46.65

For 1 1/4-in. traces, three-row stitched, add \$2.90, f. o. b. Waterloo.

Team Traces \$13.65

Solid stock throughout; not to be compared with the many cheap traces made with thin top and bottom and belly leather filler. Our traces have a heavy top and bottom and good center ply.

Doubled and stitched; scalloped inserted chafe in front with No. 45 6-link heel chains. No. 10 clips on each end of trace; 1 1/4-in. belly band bellets going around trace on ring; 1-inch leather keeper.

3C35—1 1/4-inch, 6 feet long; shipping weight 15 lbs., per set of 4 \$13.65

3C36—1 1/4-inch, 6 feet long; shipping weight 19 lbs., per set of 4 14.75

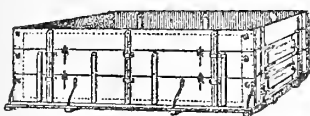

As above from our "Old Hickory" harness:

3C37—1 1/4-inch by 6 feet; shipping weight, about 16 lbs., set of 4 16.15

3C38—1 1/4-inch by 6 feet; shipping weight, about 20 lbs., set of 4 18.95

3B39—Buckle trace, 1 1/4-inch by 6 feet, weight about 15 lbs., set of 4 12.50

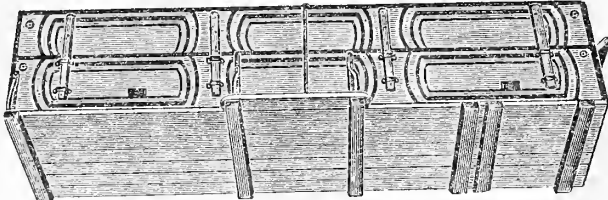

GRAIN BOX AND STOCK RACK FOR FORD OR CHEVROLET

Farm utility boxes, grain-tight and sides are readily raised for stock hauling. Fit any model Chevrolet trucks, Ford model AA only. 34 inches high, 96 inches long. Shipped from factory near Waterloo.

36C4—Complete box for Chevrolet truck	\$68.90
36C5—Panels only for Model AA Ford truck	46.75

Sturdibilt Wagon Box

Built of carefully selected and thoroughly seasoned wood. Has heavy rub irons, anti-spreader chains. Comstock lined endgate and sideboards; fastens with an eccentric lock. Angle steel grain cleats make the box grain and flax tight. Painted two colors inside and out and one coat of coach varnish applied after stripping.

SPECIFICATIONS—10 1/2 ft. long. Lower box 14 in., top box 12 in., full width. Shipping weight 350 lbs. F. O. B. Illinois factory.

24C30—38-in. box for standard track

24C30W—42-in. box for wide track

25C23—10 in. Tip-top box

With Endgate Guides as above, but equipped with steel endgate guides which prevent wear and prolong life of box. Shipped from factory near Waterloo.

36C1—Double box, weight 300 pounds

36C2—Triple box, weight 400 pounds

WAGON SEAT

A carefully made seat of selected, thoroughly dry materials. Well ironed, painted two coats of green, striped and varnished. Can be used with standard or wide track boxes. Three leaf 1 1/2-in. springs. 24C450, Wt. 4 1/2 lbs., from Minn. factory, each, \$5.65.

WAGON EXTRAS

Adjustable Pole
Fits any make of wagon hounds. Hickory with channel iron reinforcement. 54 lbs., from Minnesota factory. 24C824, each \$7.50

Doubletree Set
Hardwood evergreen, singletrees and neckyoke, carefully made, painted and varnished. 36 lbs., from Minn. factory. 24C850, set \$4.35

Steel Three-Horse Hitch

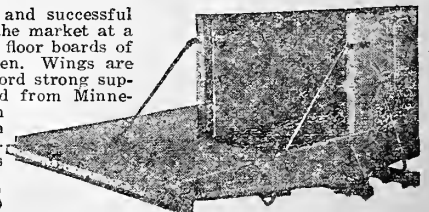

For disc, harrows, wagons, plows, or any pole implement or vehicle. Permits two horses to work on one side of the pole with one on the other. No side draft. Can also be used with two horses, one on each side of pole. All steel except the singletrees.

75C37—Shipping weight 60 lbs., F. O. B. Waterloo. Only \$4.95

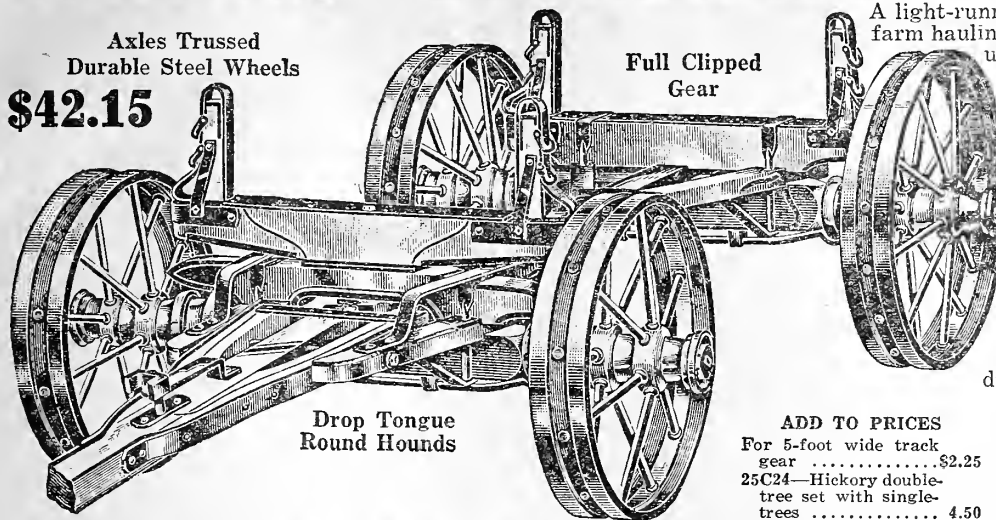

Boss Shoveling Board

The most generally used and successful type of shoveling board on the market at a big saving. Built of narrow floor boards of Washington fir, painted green. Wings are bolted to board and rods afford strong support when lowered. Shipped from Minnesota factory in 38-inch (standard track) or 42-inch (wide track). Standard 38-inch will be shipped unless specified otherwise.

24C350—Shoveling Board, only \$4.45

Galloway "STURDIBILT" Farm Gear

A light-running wide wheel truck for general farm hauling. Built to stand the gaff of hard usage. Has full drop tongue; is strongly reinforced at all points of wear and every part perfectly fitted, of first quality seasoned lumber and high grade iron and steel, built by expert wagon makers. Axles are trussed and the gear parts built in every respect to the patterns approved for highest grade wagon gears. Will compare in every point with the highest priced gear on the market. Capacity, 5,000 pounds. F. O. B. Illinois factory. Immediate shipment.

Sturdibilt "Full-Forged" Metal Wheels

The longest wearing and strongest built metal wheels for average farm use. Rough roads and uneven ground will not make the spokes come loose or rattle in the hub. Full forged process makes it unnecessary to use excessively large spokes in order to get sufficient contact with the hub and avoid crystallization. The full forged process makes it possible to use only the best and most desirable materials for each purpose as there is no waste of materials. The spokes in our Sturdibilt "Full-Forged" wheels do not break at the hub. These wheels have grooved tires with round staggered spokes, not forged into extra strong hubs.

GALLOWAY SPECIAL FARM WAGON

\$105.95

With seat, doubletrees and neck yoke, top box clamps, grain cleats, double box.

A high grade general purpose farm wagon built in a standard size to meet a general need. **Gearing**—All wood parts are oak and hickory. Bolsters, hounds, tongue and reach made of the best grade selected oak, thoroughly seasoned. Doubletrees, singletrees and neck yoke of tough hickory. **Axles**—Made of straight grain clear hickory seasoned and free from knots. Every skein is accurately fitted to the axle to make the "dish" in the wheels and the "gather" absolutely accurate. Axles are trussed and clipped. **Wheels**—Dipped in linseed oil before being painted insuring against dampness and holding the tires under any condition. Hub, spokes and fellows are of very best selected air-dried oak. Tires are set hot and cooled off gradually. Exit a large hubs with the spokes set under heavy hydraulic pressure. **Box**—Has five cross bars, side stakes and pockets all riveted, reinforced where it rests on the bolsters. All braces and clamps are on the outside of the bed and sideboards and endrads have bevel iron tops, fully equipped with rub irons, chaffing irons, heavy bed straps with hooks in the top of sideboards, angle steel grain cleats and wrought iron top box clamps.

SPECIFICATIONS—3 $\frac{1}{2}$ x10" skeins. Front wheel 40", rear wheels 44". 3x $\frac{1}{2}$ " tires, 14" lower box, 12" top box. Outside length 10' 6". Capacity 4,000 lbs. Shipping weight 1,250 lbs. Immediate shipment from Minn. or Illinois factories. No. 25C45 \$105.95

Easy-Running, Wood-Wheel Farm Truck

Axles Clipped and Trussed
Round Steel Hounds
Drop Tongue

\$61.85

Built especially to meet the demand for a good wood-wheel truck. Modern manufacturing methods and quantity production enable us to offer this exceptional value at almost one-half what it sold for ten years ago. Ironed completely to stand the average rough use of general farm and road hauling. The front gear has bent angle steel front hounds; steel bolster plates, heavy sand board and drop tongue. The rear gear has shaped wood hounds. Axles are clipped and trussed. Bolsters are extra heavy with ironed ends and top and two ring stakes 38 inches apart for narrow track and 42 inches apart for wide track. Has heavy skeins 3 $\frac{1}{2}$ x10 inches. Equipped with 36-inch wood wheels in front, 42-inch wood wheels in rear with 3x3 $\frac{3}{8}$ -inch tires. Axles are of hickory. All other wood parts of seasoned oak. Finished in orange red, striped with black and nicely varnished. Shipping weight, 715 pounds. Immediate shipment from factory in Illinois or Minnesota.

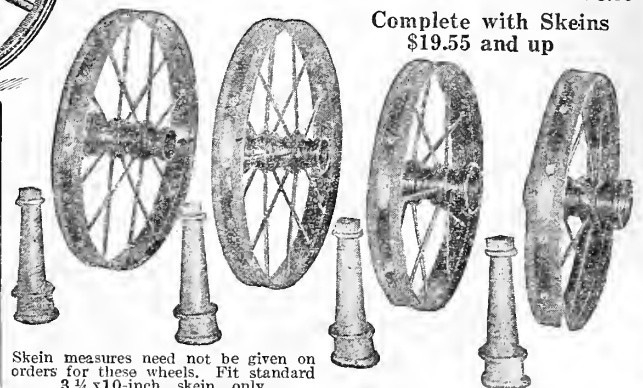

25C40—38-inch Standard track farm gear	\$61.85
25C41—42-inch Wide track farm gear	63.35

Wheels and Skeins Complete

For replacement of old wood wheels or worn-out metal wheels in complete sets of four wheels, with or without skeins to fit. Will fit a standard 3 $\frac{1}{2}$ x10 skein. Wheels are "Sturdibilt" grade, built true with 4x $\frac{3}{8}$ -inch tires and painted one coat of black asphaltum.

GARDEN AND FARM IMPLEMENTS

Barrel Pump

Cylinder of seamless brass; valves are bronze balls. All metal agitator of dasher type. Will maintain pressure of 200 lbs., giving ample capacity for two lines of hose. Furnished with attachments for mounting on the chime of the barrel, 6 ft. of 3-in. 5-ply spray hose, 4-ft. iron pipe extension and angle nozzle. Shipping wt. 33 lbs. F. O. B. Minnesota factory.

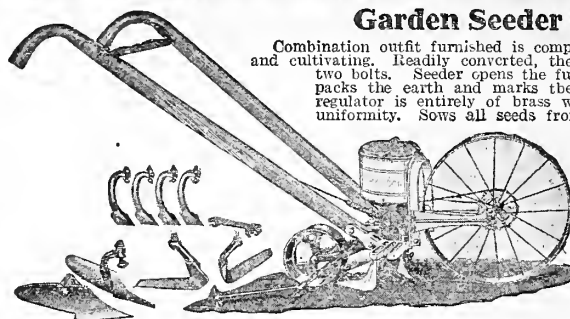

No. 32C1
\$10.75

Easy Running Hoe

A favorite tool for garden work. Frame is steel with attachments to alter pitch of the tools. Handles of seasoned hardwood, reinforced and adjustable in height, 24-in. wheel with 1 1/2-in. tire, making it very easy running.

32C240 — With cultivator attachment illustrated (23 lbs.) \$3.65.

32C244 — With cultivator attachment only (20 lbs.) \$3.15

Garden Seeder and Wheel Hoe

Combination outfit furnished is complete equipment for both garden seeding and cultivating. Readily converted, the change being made by removing only two bolts. Seeder opens the furrow, drops the seed, closes the furrow, packs the earth and marks the next row in one operation. The seed regulator is entirely of brass with die cut opening to insure absolute uniformity. Sows all seeds from finest up to beans at any depth up to two inches. Cultivator tool equipment is of high grade steel with sharp edges and polished surfaces. Wheels are 16 in. high with 1 1/4-in. tire. Steel frame and arch with seasoned hardwood handles adjustable to height.

32C203 — Combination as shown (50 lbs.) \$14.35
32C201 — As above, with two wheels (56 lbs.) \$14.95
32C205 — Seeder only, without tools (44 lbs.) \$12.65
32C218 — Cultivator without seeding attachment (32 lbs.) \$7.95

32C219 — Cultivator less plows (31 lbs.) 7.35
32C212 — Two-wheel cultivator with tools shown (37 lbs.) ... 8.65
All prices F.O.B. Minnesota factory.

Bucket Pump

All working parts of brass. Valves will not rust or corrode. Handle and foot rest are malleable. Fitted with 3 feet of 3/4-inch 5-ply spray hose and a 12-inch iron pipe extension and adjustable fog nozzle for variable sprays from a fine mist to a straight stream; malleable. Packed one in heavy fibre carton. Shipping weight 8 lbs.

F.O.B. factory near St. Paul. No. 32C4 \$3.60

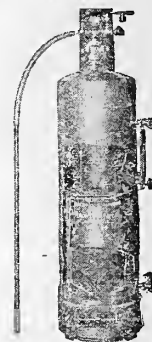

Farm Steamer and Feed Cooker

This boiler has many uses on the farm, in dairies, creameries and garages. Used for scalding hogs, thawing out tanks or wherever steam or hot water is needed, for cooking, washing, heating or rendering purposes. Burns any fuel. Makes steam in 15 minutes. Holds fire over night and perfectly safe for use indoors or outside. Construction is simple and safe, making it easy to operate.

IMPROVED STEAMER AND FEED COOKER

Shell made of boiler plate. Heads securely welded to shell and all seams welded. No flues to soot up or burn out. Heavy revolving cast grate with slide center for removing clinkers and ashes. Equipped with steam gauge and safety valve, set at 20 lbs. pressure. Furnished with hand steam pump, which is not shown in view; drain valve; four feet hose and two 4-ft. pieces of steam pipe; two shut-off valves and ash pan. Boiler fitted with blow-out fuse plug. Outside diameter 18 1/2 in. Capacity 50 gal.; height 64 in. and weight 250 lbs. F.O.B. Factory near Keokuk.

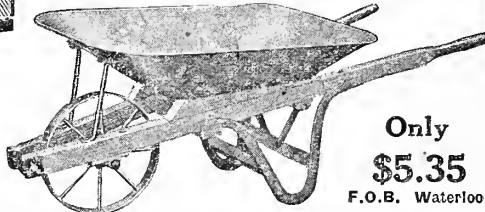

No. 39C40 \$77.00

A Wheelbarrow Bargain

A light, strong and durable wheelbarrow that will be found very valuable about the farm and garden. Tray is pressed out of one sheet with 5/16-in. rod rolled into the top. Tray measures 28 1/2 x 34 in. with a capacity of three cubic feet. Heavy steel wheel is 15 in. in diameter with 1 1/2-in. tire. Length over all 57 in. Wood legs and frame. Shipping weight, 55 lbs.

Compressed Air Spray

Capacity 4 gallons. Fitted with 2 ft. of absolutely straight spray hose and shoulder strap for carrying. Nozzle is automatic and shuts off perfectly under any pressure. Adjustable to produce a straight stream or fog spray. Shipping weight 11 lbs. (For mail shipment include postage extra.)

No. 32C2 \$4.65

Galloway Double and Single Gang Pulverizers

Rolling and packing the soil provides moisture. Unless the surface is mulched, the wind and sun will quickly evaporate this moisture. If the top soil is slightly stirred after packing or rolling, it forms a mulch or layer of loose soil—this essential mulch holds moisture in the sub soil, which later on is so necessary for the crop. The Galloway Pulverizer is a Packer and Mulcher. It hinders weeds, mulches crusts, and firms loose soil around the roots of growing crops. While doing this, the deep penetrating wheels break up clods and crush every lump. The rear wheels are placed in staggered relation to the front wheels, splitting the ridges made by the front wheels—thus working and reworking the soil. This insures a good crop and pays you big dividends on every dollar invested.

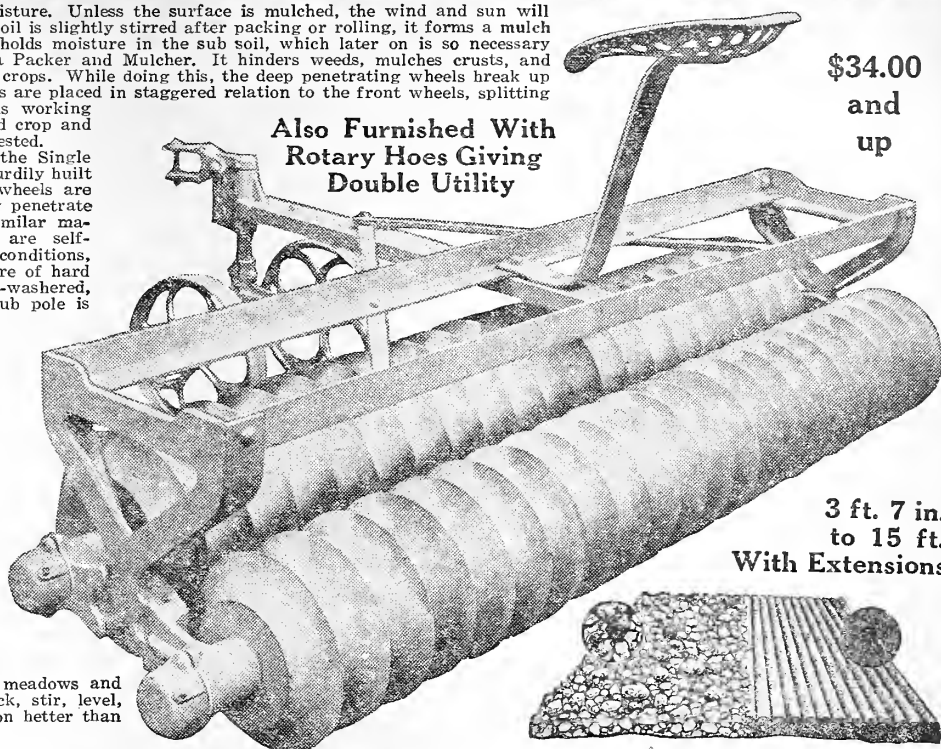

The Double Gang Pulverizer as well as the Single Gang Plain and Sprocket Pulverizers are sturdily built for a lifetime of service. Their one-piece wheels are semisteel, mounted on 1 1/4-inch axles. They penetrate 20 to 63% deeper than wheels of most similar machines. The Ball and Socket Brackets are self-adjusting—they take care of all field conditions, whether uneven or smooth. The bearings are of hard maple, adjustable eight times for wear, felt-washed, and enclosed in dust-proof boxing. The stub pole is heavy channel steel. The Tongue Truck is convertible for use with either tractor or horses.

WHAT THE PULVERIZER DOES

The Galloway Pulverizer is the ideal treatment for the soil after plowing. You can culti-pack, in one hour, all the plowing that can be done in eight hours. By culti-packing the same day you plow, you save tons of moisture that later will be turned into cash by increasing the crop yield.

The Galloway Pulverizer will do seedbed work that cannot be done by any other tool or combination of tools. The wheels, like human hands, grind, crush and pack every soil particle. Subsoil air spaces are closed up and clods pulverized. The surface is left in a fine granular mulch that prevents evaporation of moisture and absorbs rainfall.

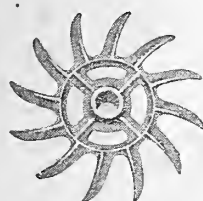

Cultivates wheat, alfalfa, oats, corn, rye, cotton, flax, hemp, beets, trucking, clover, meadows and all other crops. It will roll, pulverize, pack, stir, level, cultivate and mulch the soil in one operation better than any other tool or combination of tools.

Rotary Hoes Giving
Double Utility

\$34.00
and
up

3 ft. 7 in.
to 15 ft.
With Extensions

All Styles Convertible to Rotary Hoe

THESE ROTARY HOE WHEELS

are interchangeable with Pulverizer wheels

All sizes of Pulverizers can be furnished with Rotary Hoe Wheels instead of Pulverizer wheels at the same price. For example, No. 54C652 with 43 Rotary Hoe Wheels is \$69.00. Or, you can have 22 hoe wheels in rear and 21 Pulverizer wheels in front, at \$69.00. When Rotary Hoe Wheels are ordered as extras to convert the Pulverizer as you wish, making two complete implements, in quantities of ten or more, the price is \$1.00 each. Order a complete set with your Pulverizer and secure this double utility.

Before Pulverizing and After

The correctly shaped Dunite Metal wheels press down deeply, close up air spaces, and make a compact, firm seed bed. Subsoil moisture rises through compact soil, helping quick germination and carries soil foods to roots.

IT MULCHES. The rear wheels split the ridges made by the front wheels, thus plowing and reploting the soil to form a loose mulch, preventing evaporation of moisture and drying out of soil. Easily the most useful of all tillage implements excepting the plow, say farmers everywhere.

Low Prices and Sizes for Every Need Make This Purchase a Profitable Investment

Machine Number	Length Feet	Actual Rolling Capacity Feet	Weight, Pounds, Complete	Diameter of Wheels Inches	Number of Wheels	Price F.O.B. Ohio Factory

Sprocket Pulverizers

Teeth Like a Saw
60% Longer Than Others

\$27.50 and up
3 ft. 7 in. to 16 ft.
Wide

Teeth of the Sprocket Wheels are 60% longer than others—a better job of cleaning and mulching is accomplished. Sprocket teeth are slanted as compared to others. Penetrates better and lifts more soil thus mulching better. Teeth are like a saw—not straight. Dunite Metal Brackets are one piece—no parts to work loose. Heavy and substantial. All bolts are lock-washed. Bearings are reversible and of hard maple, protected from dirt by felt washers and dust proof caps. They are self-oiling; their octagonal construction makes them adjustable eight times for wear—not wood blocks with a hole for the axle.

Single Gang

Quickly Convertible
to a Rotary Hoe

Pulverizers

Only
\$25.50 and up

The same wheel construction with its deeper penetration as is found in the Galloway Double Gang Pulverizer. Wheels crush lumps, and leave ridges similar to the Double Gang excepting there is no plowing and reploting action, as caused by the Double Gang construction. These Single Gang Pulverizers are of the same high grade construction as Galloway Double Gang Pulverizers. Frames are heavy, high carbon steel angles turned up to form a weight box. Axles are 1 1/4 inches in diameter, lathe turned (not rough steel) and of high carbon steel. Wheels are Dunite Metal, a tougher, stronger mixture of steel and iron which insures long life. Packer wheels penetrate 63% deeper than others—scour better—sharper.

Triple Value in this TWO-ROW CULTIVATOR

Lighter Draft and Greater Simplicity

The three essential features of a good cultivator are: Simplicity, Service and Draft. The New Galloway, having less parts than any other cultivator manufactured, but having all the essential features, makes it the simplest and yet the most efficient all around cultivator. Having an adjustable back bar and combination gangs, which can be changed from an 8 to a 12 shovel with a cut of 9 to 10 inch spread, it will service in rows from 3 ft. 4 in. to 4 ft. width. The individual lever system enables the operator to make any desired shift. It is the lightest draft cultivator manufactured; having a 48 in. wheel with a 3 in. tire, there is more bearing on the ground and less penetration into the soil. The eveners placed on top of the implement gives a 15-in. closer hitch than any other cultivator. The gangs are entirely contained within the contour of the wheels, which insures even penetration at all times.

The Galloway three horse hitch cultivator can be equipped with a four horse hitch and fore carriage which can be attached with six bolts. Weight of three horse hitch cultivator 630 lbs. With four horse hitch and fore carriage 850 lbs.

\$70.35

and up

WITHOUT TRUCKS

Three Implements in One

It is a great hardship in any business to invest heavily in a machine for but a few weeks' use out of each year. To give greater utility to the Galloway cultivator we have provided attachments enabling you to have three implements for little more than the cost of one.

STALK CUTTER

Attaches to any three or four horse hitch cultivator shown on this page.

Specifications

Blades—Made from Stalk Cutter special steel, double beveled, adjustable to different rows. 24 inches long. Six blades to each reel.

Reels—Rigidly held by heavy grey iron castings to which blades are bolted, and add sufficient weight to obtain penetration.

Raker Teeth—Are provided which travel in front of blades to straighten fallen stalks to position to come under knives and, raise automatically when reels are lifted. Guards or fenders are placed to completely afford protection to operator.

No. 49C108 **\$40.00**

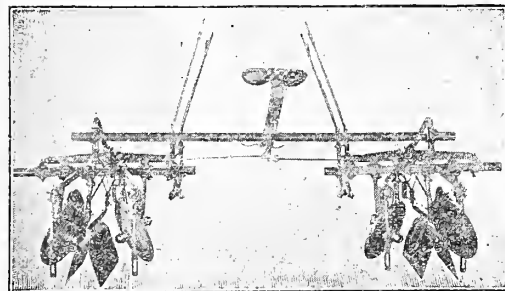

DISC ATTACHMENT

The Disc Attachment may be attached to the Galloway Cultivators by removing the gangs and attaching with four bolts to the arches. Any adjustment or slant desired can be obtained with the disc by simply loosening one tap.

The discs are 16-inch, having hard oiler and dust proof housing and run in grease. The fender is trough type, 23 inches long, 9 inches deep, made from 18 gauge sheet steel. Shovels 2x9 inches. Weight for two-row 256 pounds; weight for single row 180 pounds.

No. 49C109 **\$32.00**

Two-Row Lister Cultivator

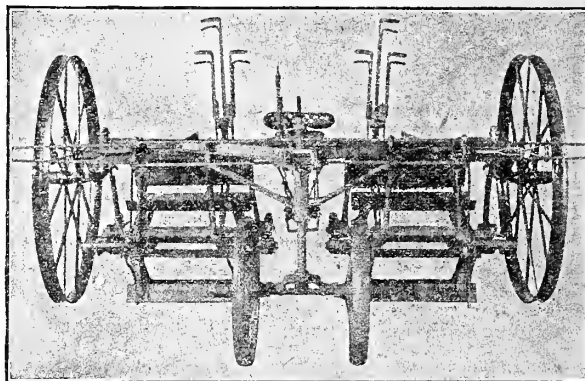

A very high grade machine, warranted to give the best of service and adjustable to any width of row. The high grade tension springs make it easy of handling and raising for turns.

Remember, the Galloway Warranty provides for successful operation or your money back. You take no chances in buying a Galloway TWO-ROW LISTER CULTIVATOR, easy of draft, of the very best of material money can buy, light enough for service but heavy enough to perform under all conditions.

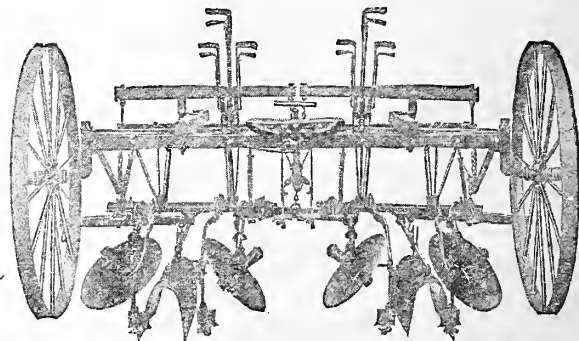

Discs, 16 in., 11 gauge; Bell Wheels, 16 in., 11 gauge; Hard Maple Wood Boxings; Shovels, bull tongue; Seat Bar and Frame Tubing, very high grade square seamless steel warranted for the use intended; Fenders, covered and well braced, 18 gauge; Castings, malleable; Pole, Neck Yoke and Eveners and Single Trees, the very best of hard woods.

No. 49C125—Complete with pole, eveners and neck yoke, 665 pounds, **\$72.35**

F.O.B. Kansas factory

Stalk Cutters of previous design have always been a very hazardous tool, many accidents have been reported, and the safety of the operator and animals have had the first consideration in this new design, and is emphasized in SAFETY FIRST.

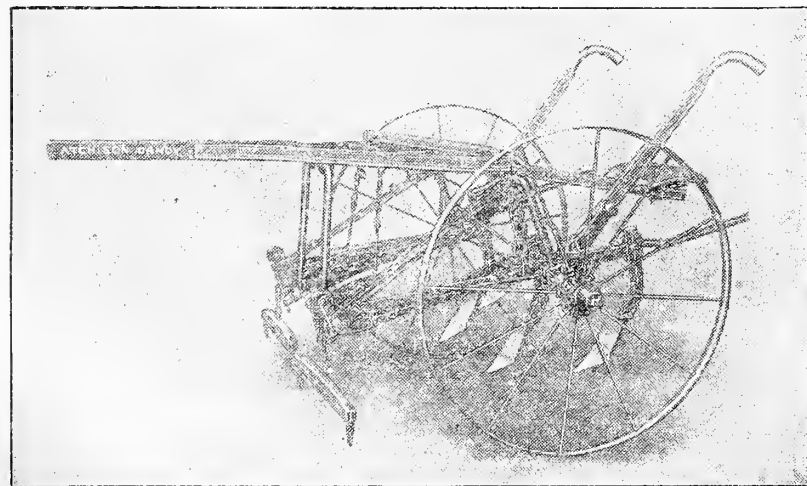

By using a Disc Attachment the user should be able to cultivate corn as soon as it appears through the ground, working up close to the corn with the shovels in the rear and working ridges with discs.

Light Draft, One-Row, Body Balance Cultivator

The Galloway One-Row Body Balance is the last word in cultivators. Weighs 350 pounds, has combination gangs which can be converted to either four or six shovel. Perfectly balanced, no neck weight. The special feature of this cultivator is the chain hitch; one horse pulling directly against the other. No side stress with unevenly gaited team. The gangs are made of high carbon, round edged flat bar steel with broken shanks, and are sufficiently strong to withstand the severest strains. Note the seat balance cables, which have an indirect hitch on the gangs, insuring easy manipulation of the gangs, either vertically or horizontally. Wheels, 40 inches with 2½-inch concave tires. Absolutely the lightest draft cultivator manufactured.

Light Draft, One-Man, Two-Horse Hay Loader

The man who wants to make hay with the least possible expense cannot afford to overlook this loader. A team of horses, a boy to drive and one man on the wagon is all that is needed. It is a real, one-man, two-horse loader. Users claim it is the easiest-running, cleanest-raking loader they have ever seen. Handles a ton of hay in less than ten minutes from swath or windrow.

Quality hay means more dollars for you. Ten to fifteen acres will justify your owning this loader. Gathers the hay clean out of dead furrows and it does not thresh the hay. Raking bars drive in a complete circle, giving a smooth operation which handles the hay without damage or loss.

Strongly Made—Perfectly Balanced

Raking bars are of selected long-leaf yellow pine, adjusting themselves automatically to light and heavy hay. Length of delivery can be controlled from the wagon through the adjustable apron. Has a hinged tongue and automatic hitch which uncouples without driver leaving the load. Has extra large main drive sprocket and large ground wheels, making it light of draft and easy to handle. The entire machine is perfectly balanced on the axle. You can raise the loader with one hand. Discharge height more than 9 ft. 8 ft. wide. Shipping weight 1,060 pounds.

No. 20C78—F. O. B. Ohio factory..... **\$93.85**

Sweep Rakes and Overshot Stacker

Four wheel power lift rake. Carries a heavy load over uneven ground with ease. Raises the load by horsepower. Does perfect work in alfalfa, kaffir corn or sorghum. Carrying wheels 24 inch with 4 inch face. Strongly built and well ironed. 14 teeth 9 feet long with metal points. Width over-all 13 feet. Shipping weight 685 pounds.

The Fast, Economical and Profitable Way to Cut Hay with Your Fordson Tractor

This Fordson Mowing Machine is ruggedly built of nickel alloy steel. It is simple in design and easily installed on your Fordson with no other tools than ordinary wrenches. The mower blade has two 6-inch strokes with each revolution of the tractor drive worm, cutting through two guards with each stroke, twice the travel of the ordinary mower knife. Mower bar is in plain sight of the driver.

With this mower attached to your Fordson one man can cut 2½ acres of hay per hour. It is strong and dependable and fully guaranteed to satisfy you. Furnished with two cycle bars and all attachments to connect to your Fordson, in either 5 or 6 ft. length.

Galloways' Tongueless Steel Frame Disc Harrows

Highly Tempered Blades
Even Penetration. Seven
Sizes to
Choose from

\$42.90
and
up

Third Lever on any size
disc, extra \$2.50

This all-steel harrow of the bumper type is the most popular horse-drawn disc now in use. As the illustration makes plain, it is of extreme strength and simplicity. A high seat with spring steel seat bar sets well back to balance the weight over the machine. The foot rest is adjustable. Scraper blades of spring steel swivel with the curve of the disc, being always in position. Special curved drawbars keep the gangs level at all times, permitting them to roll evenly without buckling or riding.

All sizes of this disc are fitted with 16-inch Galesburg blades noted for their high grade, temper and even turning. Malleable castings are used throughout the disc, with the exception of spacer spools and the axle end washer which are gray iron.

The tongue truck is fitted with a swivel joint and has heavy truck wheels with convex tires. An adjustable center block on the drawbar constitutes great improvement over the third lever in securing even penetration. Third lever can also be added to any size harrow if desired, as priced below.

All sizes are furnished complete with tongue truck, weight boxes and four-horse hitch even, except the 6 ft. which comes with three-horse even. Pole and five or six-horse hitch can be included as extras at prices shown below.

38-inch Harrow Cart, with 2 or more sections 9.85

Draw Bars included with 2 or more sections.

Here is the greatest harrow value in America—worth twice as much as the old style lever harrow—has more teeth and its flexibility permits it to go down in the hollow places and over the ridges without skipping one foot of ground. It thoroughly pulverizes every bit of surface and it works just as good in stony land, corn stalk ground or sod plowing and automatically cleans itself of all stones, trash, etc. Each section of harrow entirely independent of the others. No side motion or sections over-riding each other.

The Perfect Grain Grader, Cleaner and Separator New Perfection Farm Fanning Mill

This mill is an all round, general purpose cleaner, separator and grader. It will thoroughly separate wild and tame oats from wheat, durum or barley, timothy from clover, flax from millet and mustard and will grade and clean perfectly timothy, clover, millet, alfalfa, alsike, beans, peas, corn, lespedza, sorghum, kafir, maize, cotton seed, rice and all small garden seeds. Each machine is equipped with wheat and barley gangs. A complete book of instructions for all separations is sent with each machine.

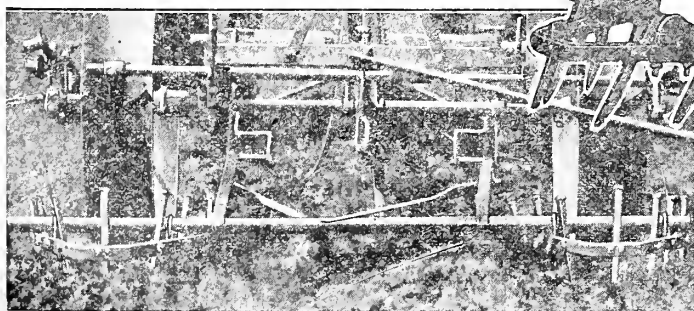

Guaranteed: To give complete satisfaction or money refunded; to clean and separate more grain than any other mill on the market with the same sieve capacity. Shipped from the factory in southern Minnesota.

Corn Planter Harrow Insures a Good Stand

This harrow is quickly and easily attached to any corn planter, follows the wheels and thoroughly drags over planter tracks. It does not require any extra horse power. It covers all corn which the planter misses. It destroys planter tracks so birds and animals cannot follow up the row and eat seed. There is no washing out of seed where the corn planter harrow is used as it fills up the planter tracks and does not leave a runway for water. This harrow creates a dust mulch, preserving moisture for sprouting seed. It prevents the ground forming a crust and destroys weeds in the row, affording the corn an open start. Works on any ground, raises and lowers with planter front. Every part adjustable; fits any planter. Does not interfere with backing or turning around—automatically cleans itself of trash.

Insure a Good Corn Crop

Seed corn is worth money—don't waste it. Your time in the field is worth money—make every minute count. Seed corn that doesn't germinate because it is eaten by crows and gophers, is washed out or lacks moisture means a loss. Prevent these losses with the Corn Planter Harrow.

Grade Your Seed Corn

Two corrugated steel drums, one inside of the other, with perforations of different size and shape so that any corn can be perfectly graded. The coarse screen drum is inside the finer one and the corn is delivered to the inner coarse screen by means of a tube connected with hopper. Flow of corn is regulated by a screw feed on crankshaft which gives perfect control of the flow of corn. Well made, simple and compact, 30" high, 32" long, 15" wide. Wt. 45 lbs. Price, F. O. B. western Ohio factory. No. 37C1. \$8.95

The ideal farm scale in either pit or pitless type. Every scale is guaranteed for a period of ten years without reserve. We guarantee that it is made of best material, sealed to the United States standards of weights and when rightly set up will weigh accurately. Any part that develops a defect in either material or workmanship will be replaced free of charge, even after the ten-year guarantee period has expired.

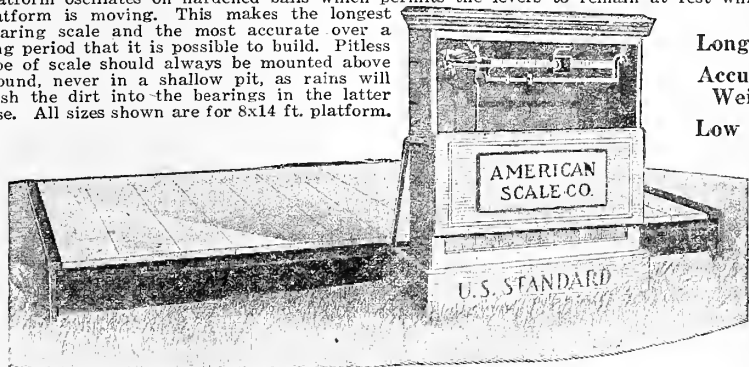

Galloway scales have many exclusive features such as extremely wide knife edges, made of the best tool steel, heat treated; hardened ball bearings that take all the wear off these knife edges, levers and all other parts made of extra heavy special metal. These features insure long life and accuracy in weighing.

PIT SCALES (Illustrated at the left)

Requires a pit about 28 inches deep. Levers can be moved close together or spread apart, making it possible to vary the size of the platform. Standard platform size for this scale 8x14 ft. (lumber not included). Illustration at the left shows the arrangement of the scale levers. Thousands of them are in use all over America and in most foreign countries, many that were sold over twenty years ago are still in use giving perfect satisfaction. We furnish all working parts, standard beam and beam box. Quantity production alone makes our low prices possible.

PITLESS TYPE (Illustrated below)

Everything furnished as shown below except the floor boards. Entirely constructed of steel, iron and brass except for the beam box. Requires no pit. Sits on top of the ground, only 9 inches high. Can be easily moved from one place to another. The entire lever system of this scale always remains stationary, which prevents unnecessary wear on the hearings. Platform oscillates on hardened balls which permits the levers to remain at rest while the platform is moving. This makes the longest wearing scale and the most accurate over a long period that it is possible to build. Pitless type of scale should always be mounted above ground, never in a shallow pit, as rains will wash the dirt into the bearings in the latter case. All sizes shown are for 8x14 ft. platform.

Where Your Dollar Does Its Duty

Champion Geared Forge

With Pressed Steel Hearth.

\$10.90

Gear Ratio 48 to 1.

The Champion Geared Forge is designed for light and medium work on farms, plantations and in garages where a comparatively light-weight forge is desired. The fan is driven by machine-cut helical gears, running smooth and noiseless in a dust-proof, oil-tight gear case which is cast iron, insuring rigidity not found in pressed steel gear cases. The hearth is steel, pressed from a heavy gauge single sheet, making a light-weight, low-priced, rigid forge for general agricultural use. The legs are bolted to the hearth with heavy steel leg sockets and are strongly braced. No. 29C146 is furnished with Half Hood when wanted for indoor use. F. O. B. Pennsylvania factory.

GALLOWAY GUARANTEED FARM FENCE

GUARANTEE

Every roll of Galloway fence is absolutely guaranteed by us to be constructed from the very best material and to give entire satisfaction as a stock-turning proposition to the user. When the fence arrives examine it, compare it with any other fence, test it in any way and if you are not thoroughly pleased with it send it back and we will cheerfully refund your money and pay freight both ways.

FARM FENCE SPECIAL

An unusual value in a good farm fence. This wrapped joint style fence is easy to handle and erect. Just the thing to use for hogging down corn, as it can be easily moved. Good galvanizing is the life of a fence. Test the galvanizing coat on this Galloway farm fence and you will be convinced that it is as nearly rust-proof as any. Strong and substantial and a wonderful bargain at the prices we quote below.

Construction. No. 11 margin wires, No. 15 line wires, No. 14 stay wires, open hearth steel heavily galvanized. Put up in 10, 20 and 40-rod rolls. F. O. B. Illinois factory.

PERFECTION KNOT FENCING

Each stay is continuous from top to bottom of fence and is securely fastened to line wires with a circular, non-slipping knot which makes this one of the stiffest and strongest fences made. Woven of basic stock, open hearth steel galvanized wire of the highest quality.

Construction. Top and bottom wires No. 10, intermediate line wires No. 13; stay wires No. 13. Six or twelve-inch mesh, weights as shown below. Shipped from factory in Illinois in 10, 20 and 40-rod rolls.

Poultry Fence

Biggest poultry fence value we have ever offered. A strong, light weight fence closely spaced at the bottom to turn small chicks, rabbits, etc., at one-half the usual cost. Quality is not sacrificed, but this fence is guaranteed to satisfy you. Top and bottom wires are No. 14, line and stay wires No. 18, stays 4 1/2 inches apart. Line wire graduates from 1 inch at the bottom to 4 1/2 inches at the top. All open hearth steel, heavily galvanized. In 10 and 20-rod rolls. F. O. B. Illinois factory.

Feed Cooker Only \$15.90

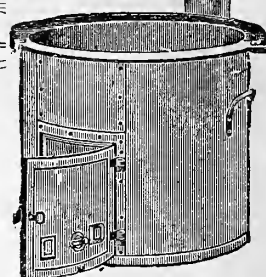

Farmers' Friend

A very popular and practical design of feed cooker and water heater. Boiler of heavy 16-gauge steel with all seams securely welded and locked. Tank has four heavy handles for carrying; rests inside flange top of furnace body. Furnace section also built of 16-gauge heavy steel. Leg base raises it from the floor for indoor use. Large fire door will take 10-in. chunks. Burns wood, coals or coal. Furnished complete with heavy cast grate, one joint of 6-in. pipe and elbow. The 40 and 60-gal. sizes have a grate surface of 20x14 in.; the two larger sizes have grate surface 20x21 in. Shipped from factory near St. Paul or Quincy, Ill., whichever is closest to you.

ZERO HEATER

Ideal for small tanks. Galvanized sheet steel body with unbreakable hinged top to feed large chunks of wood or coal. Lugs to fasten to tank bottom. Diameter 15 inches, height 24 inches, weight 40 lbs. With shovel, one joint pipe, spark arrester and lugs. Prompt shipment from factory near St. Paul.

32C42—Zero Tank Heater \$5.35

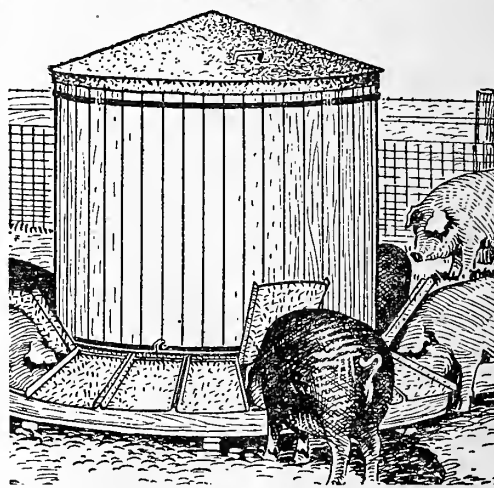

Water Tested and Guaranteed

Giant Round Creosoted Self-Feeder

It is easy to clean and easy to move from one lot to another. Easily filled, trouble proof and as everlasting as creosote-oil-filled lumber and heavy steel can make it. It handles any kind of shelled or ground feed, tankage or minerals. Two and three different kinds of feed can be fed in the same feeder at one time.

The smallest pig can lift the doors of this feeder. Set one of these Round Feeders in your hog lot and do away with half-starved, runty pigs. After the feeder is filled the pigs feed themselves by simply lifting the doors as shown below. We have utilized nature's laws which teach the pig to root for his feed. He roots the door up to reach the feed and there the feed is, clean and protected from waste. The door is dropped into place automatically when the pig leaves.

Ground feed and tankage cannot cake up because of the ten degree pitch of the galvanized metal bottom which forces feed into the trough. Each bin has a metal throat, easily adjusted by two set screws. Raising or lowering this throat controls the flow of feed into trough and makes it possible to handle any kind of feed in one bin without regard to what the other bins contain.

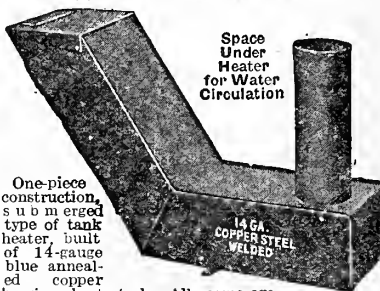

SIZES AND PRICES

Shipped knocked down in sections from factory at Des Moines, Iowa.

No.	Cap. Bu.	Feeding Doors	Bins	Feed Hogs	Shp. Wgt.	Price Each

18C28—8 ft. long, weight 24 lbs., each.... 2.40

Heated Stock Fountain

Furnishes an abundance of water heated to the proper temperature for winter fattening. Feeding experts have demonstrated that hogs will put on more flesh at cheaper cost if they are furnished with plenty of water at the right temperature summer and winter. This fountain will pay for itself in one season by the cheaper gains that your pigs will make.

The lamp heater sets directly beneath the cast iron drinking pan. Heat enters the pipe and then circulates through two openings up and around the inner and outer tank through a 3/4-inch space between the two. Uses less than one quart of oil in 24 hours.

Drinking trough is made of heavy gray cast iron. Will not wear out as troughs made of cheap metal do. Trough is placed 10 inches from the ground, tank is built of heavy 24-gauge galvanized steel, top and bottom of 20-gauge. The top of the inner tank sets down 2 1/2 inches which allows the water to flow freely into the tank through the center filling plug which measures 2 1/4 inches in diameter. The filling plug is tightly sealed with rubber gasket. Equally valuable for summer use for keeping the water cool because of its double walls.

Made in one size only, 100-gallon capacity. Shipped from factory near Quincy, Ill. Weight, crated, 160 lbs.

18C29

Complete

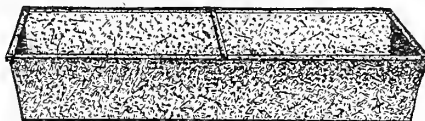

\$21.35

Feeding Pans

Pressed out of one piece 22-gauge galvanized steel, not damaged by freezing. No seams or sharp corners. 17 in. diameter, 3 1/4 in. deep. Pans nest together for low freight or can be mailed.

BROODER HOUSE BARGAIN!

Combined Brooder and Hen House

MADE IN TWO SIZES

This combination brooder and hen house is made on the same design of the same kind of material in two different sizes. The Model 5 is 8 feet wide, 10 feet long, 5 feet high in front, 4 feet high in rear and 7 feet at gables. The house has 80 square feet of floor space furnishing capacity for 500 day-old chicks.

The Model 10 has four ventilating adjustable windows in front and is 10 feet wide, 12 feet long, 5 feet high in front, 4 feet high in rear and 7 feet at gables. The house has 120 square feet of floor space, furnishing capacity for 1,000 day-old chicks. Both sizes are built in sections which go together with bolts.

1C—Model 5, 900 pounds, from Waterloo.....	\$42.15
Double miteproof floor for above, 250 pounds.....	11.35
1C—Model 10, 1,300 pounds, from Waterloo.....	54.35
Double miteproof floor for above, 350 pounds.....	15.15

MANY USES—Latest improved type movable Brooder House usable for little chicks or laying hens. Many use it for grain bin at some seasons of the year. Serviceable all the year around in any kind of weather and the money it saves you will more than pay for the house every year you use it.

WEATHER-TIGHT CONSTRUCTION—This house is built absolutely weather-tight yet it has ample ventilation but no drafts. The air in this house is constantly being changed. The windows are arranged to flood every corner with sunshine and keep fresh air from going directly on chicks.

EASY TO HEAT—The house is built high enough for convenience and yet with low type roof to make it cheap and easy to heat. There is not a single crack or crevice for the wind to get in or the rain to leak through or the snow to drift in. It is built warm and tight.

DOUBLE FLOOR—A damp floor or one that has cracks in it to let the wind up through will kill off baby chicks quicker than anything else. Our new floor is absolutely moisture-proof, wind-proof and mite-proof. It is built of double thickness of lumber with tarred felt paper between. Top floor is made of best grade tongued and grooved flooring. Floors for either size house priced separately.

WEATHER-PROOF ROOF—Our roof is made of best solid construction out of best grade 6-in. tongued and grooved flooring. In addition we furnish a roll of rubberoid roofing with plenty of tacks and lap cement to entirely cover the roof which makes it absolutely leak-proof even in heavy storms. This also saves heat and prevents drafts.

DON'T BE FOOLED ON SIZE—Figure up the square feet of floor space and see how much chick capacity you are actually getting for the money. Our 500-chick size brooder house has 80 square feet of floor space and our 1,000-chick size has 120 square feet of floor space. These sizes are not a bit too large—don't be fooled into buying anything smaller.

Easily Heated with Oil or Coal Brooder Stove

The design of this Brooder House makes it easy to heat and economical on fuel. We can supply you with a coal burning or an oil burning brooder stove to fit either size of brooder house. These coal and oil burning brooder stoves are fully described on page 57. You will not that the oil burning brooder stove can be furnished in two styles—One with thermostat, which automatically controls the heat night and day and the other with hand regulator for you to set at whatever temperature you want in the house. Stoves are priced separately on page 91 but will be shipped with the house if ordered at the same time.

Galloway Round Brooder and Hen Houses

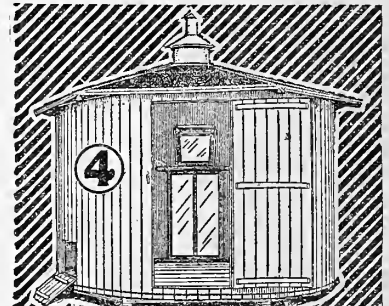

NO COLD CORNERS—CREOSOTED OR PAINTED—WEATHER PROOF

The weatherproof, big capacity, permanent poultry house is replacing the old cumbersome and expensive building. The warmest, best lighted and ventilated, best built and most convenient house on the market. The round construction does away with cold, damp corners where chicks are apt to be crowded. Every inch of space is used which makes more square feet of space for each chick. Mounted on skids and easily portable. This feature is especially attractive to renters as the house can be moved when you leave the place. It pays for itself in the number of chicks saved and also makes it possible to raise several times the usual number of chicks with less work and greater success.

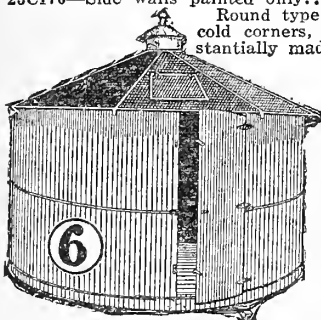

The round type of house is offered in four sizes—the Galloway Junior with capacity for 100 to 200 baby chicks (No. 4 in the picture) and the other style (No. 5 in the picture) in three different sizes with capacity from 300 to 1,000.

No.	Style of Finish	Chick Cap.	Diam.	Shp. Wt.	Price

23C176	—Side walls painted only.....	1000	17 ft.	2500 lbs.	149.95

Round type houses Nos. 4 and 5 are built entirely of wood, round, with no cold corners, improved type ventilators, plenty of windows and sunlight, substantially made in sections, going together with bolts, mounted on heavy skids, making them easily portable. Wall sections are 6 ft. high with ventilating glass windows. Full 6 ft. door. Shipped from Des Moines, Iowa.

Above picture shows Galloway Junior Brooder House (No. 4) and larger type of combined Brooder and Laying House (No. 5) which is offered in three sizes and three styles of finish.

Grain Bin

Corn Crib

Galloway Portable Grain Bin

BUILT IN SECTIONS—BOLTS TOGETHER—HEAVY STEEL HOOPS—WEATHER PROOF

Solves the farmer's problem of grain storage. Can be set in field and filled directly from the thrasher. Built in sections and bound by steel hoops. Entirely weatherproof. Has special ventilator system and prevents mildew or spoilage—saves grain from mice or rats. Equipped with large entrance door, shoveling board, roof filling window, roof ventilator; 11 ft. bin has two skids; 14 ft. bin has three skids. Shipped from Des Moines, Iowa.

HOG HOUSE BARGAINS

The Bungalow--Our Most Popular House

These houses are sold with the distinct understanding that you can return them and get your money back if you are not completely satisfied when you set them up. They are especially adapted for renters because they are built in sections, being put together with a few bolts and can be taken apart and easily moved on short notice. They are made out of the very best materials and every house comes complete with heavy ribbed window glass for roof of each pen, all hardware, metal peak type ventilator and bolts for fastening sections together. Floors are priced separately and can be purchased or not as you wish.

Double Bungalow--Two-Pen House

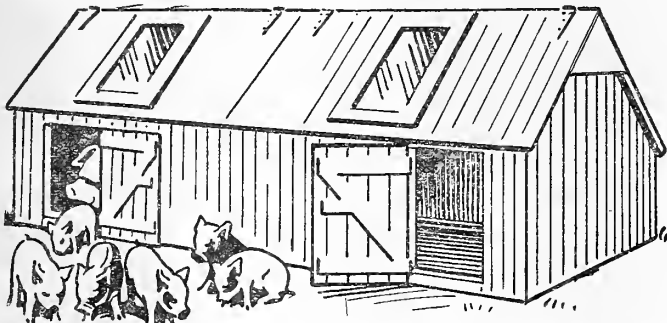

In this Double Bungalow House you get more for your money than in any other style, size or design. It is the most practical and cheapest to build, the best for use and the most economical to own. It costs less to build the Double House than to build two single houses and yet it is not too big to be easily moved about. It is built after the same style and of the same material as our Individual Farrowing House described above but it is 12 feet long and contains an inside partition which divides the house into two pens. The front section of the roof is divided so that either half can be raised at any angle independent of the other half. As shown in the picture, each pen is provided with entrance door and also roof ventilator 18x28 inches, fitted with heavy ribbed glass which diffuses the sunlight into all the corners. Each end is provided with metal ventilators of the improved peak type which furnish constant

ventilation without creating any drafts. This Double House is built on extra heavy beveled-end skids running the full length of the house with a hole for attaching clevis when you wish to move from one lot to another.

This house has been our best seller because it is the most for the money. It serves the purpose, it is movable, it is sanitary, it is warm, it is weather proof, it is dry, it is big enough for two litters, it is not too big to move around, it is latest type and its price can be saved the first season you use it. Comes in sections with all hardware complete and bolts for putting sections together. Full 1-inch floors in two sections priced separately. Painted carbideum brown with skids thoroughly treated with creosote to prevent rotting. Best grade kiln-dried, tongued and grooved lumber used throughout.

No. 1CS12--Double (2-sow Farrowing House, 12 ft. long, 6 ft. wide, 3 ft. high in front, 2 ft. at rear, 5 ft. at gable. Shipped from Waterloo knocked down in sections easily put together with bolts. Complete with all hardware and inside partition. Shipping weight 490 lbs. Price.....\$30.95

Individual Houses

We offer the "A" Type House in two sizes. This style meets the demand for a practical, warm, roomy, sanitary farrowing house for a small amount of money. They are easily moved about. The material alone of the same quality we are using will cost you more than we ask for the house complete ready for you to bolt together and use. Illustrations show the "A" Type House with doors closed and with doors open. These houses are built of 4 and 6-in. flooring without a crack or chink. Painted carbideum brown which is a wood preservative and disinfectant. The ventilation is controlled by sliding the two-piece galvanized steel ridge cap back and forth on the ridge. The front entrance door is hinged at the top--hogs cannot rub them off, wind cannot blow them shut. The large door in the side section laps over the side when it is closed so as to make the house absolutely rain proof and storm tight. These houses are built in sections, go together easily with bolts. Come complete with hinges, hooks and all hardware. Every section has holes already drilled for bolting together. Full 1-in. floor priced separately. Each house mounted on skids which are thoroughly creosoted to prevent rotting.

Round Hog Houses--Four and Six-Pen Houses

Pressure Filled with Heated Creosote Oil

Two men can put up a Galloway Farrowing and Hog House in a few hours. A hammer and wrench are all the tools required. Sections are made up at the factory ready to bolt together and when it is built you have a hog house that a storm will not tear to pieces and one that is as tight as a drum. Wall Sections are made with rounded inside plates cut from 2-in. material, at top, bottom and in the middle. Roof Sections are built solid of good lumber which is covered with highest grade roofing. All roof sections are interchangeable. With or without roof windows. Three roof windows 20x40 in. furnished for \$9.00 additional. Two Heavy Steel Hoops are furnished for holding all wall sections together. They are easily tightened and prevent side wall boards from being pushed or knocked loose from plates. Four Floor Sections with double floor under the pig nests in the center of the house rest on three 4x4 skids which also forms a foundation.

THREE FINISHES

1. Completely Creosoted--The sides, floor, roof, joists and skids--every piece of siding and dimension lumber in the Galloway Round Hog House is Oil-Filled by the Heat and Pressure Method.

2. Walls Painted, Floors Creosoted--This finish includes full creosoted floor, outside side walls painted and roof covered with high grade roofing.

3. Side Walls Only Painted--Floor natural and outside walls nicely painted; roof regularly covered with high grade roofing.

No. 2--4-PEN HOUSE
Fourteen feet in diameter, 6 feet high. Equipped with three side-wall ventilating windows. The Greatest Value of them All

Farm Grinder

Auger force feed. Adjustable for fine or coarse grinding while mill is in motion. Two sets of burrs, one fine and one coarse, 7½ inches and 10 inches. F. O. B. Waterloo.

2C11—H. P. required, 5-7; pulley, 8x5 in.; speed required 500 to 700; capacity per hour, 25 to 35 bu.; weight with flywheel, 180 lbs.; price with flywheel, \$20.65. Extra burrs, weight 5 lbs., coarse or fine, per set, \$1.50.

2C12—H. P. required, 8 to 10; pulley 10x16 in.; speed required, 500 to 700; capacity per hour, 35 to 60 bu.; weight with flywheel, 295 lbs.; price with flywheel, \$26.65. Extra burrs, weight 12 lbs., coarse or fine, per set, \$1.75.

Combination Crusher and Grinder

Our most popular feed mill for general all around farm use. Will grind corn on the cob as well as small grain or shelled corn. Made in two sizes; one with 8-in. burrs, the other with 10-in. burrs. Either size can be furnished with third bearing for heavy power as illustrated. Uses the fast-cutting crow-foot burr and is equipped with safety release lever. The 8-in. burr size requires 3 to 7 H. P. and should run at 100 R.P.M. for each horse power used. It has a capacity of 8-30 bushels per hour. Furnished complete with steel frame, hopper, 35-lb. balance wheel and one set each fine and coarse 8-in. burrs. F. O. B. Waterloo.

2C3—Shipping weight 225 pounds \$23.80

2C3P—Same as above, with third bearing, 290 pounds 27.80

8-in. burrs, shipping weight, 9 pounds, per set, fine or coarse.

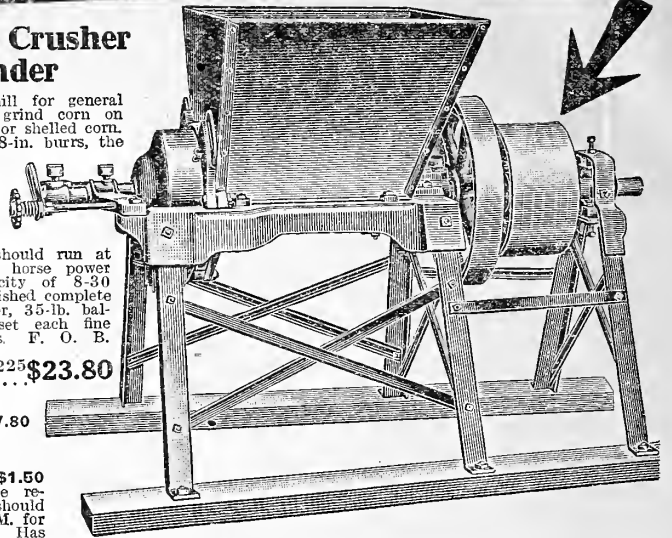

Per pair \$1.50

The 10-in. burr size requires 6-15 H. P. and should run at about 70 R. P. M. for each horsepower used. Has a capacity of 20-60 bushels per hour. Furnished complete with steel frame, hopper, 55-lb. balance wheel and one set each fine and coarse 10-in. burrs. F. O. B. Waterloo.

2C14—Shipping weight 355 pounds \$34.65

2C14P—As above, with third bearing, 420 pounds 39.15

10-in. burrs, shipping weight 14 pounds per set, fine or coarse. Per set, 1.75

Flour and Meal Grinder

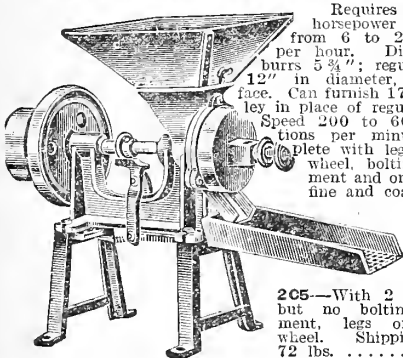

Requires 1 to 4 horsepower to grind from 6 to 20 bushels per hour. Diameter of burrs 3 3/4"; regular pulley 12" in diameter, with 3" face. Can furnish 17"x4" pulley in place of regular pulley. Speed 200 to 600 revolutions per minute. Complete with legs, balance wheel, bolting attachment and one set each fine and coarse burrs.

2C5C Shg. Wgt. 103 lbs., Price \$14.95

2C5—With 2 sets burrs but no bolting attachment, legs or balance wheel. Shipping weight 72 lbs. \$9.85

2C5L—With legs and 2 sets burrs but no balance wheel or bolting attachment. Shipping weight 83 pounds. \$11.15

Extra burrs, fine or coarse, 3 3/4 pounds. Pair95

For All Small Grain

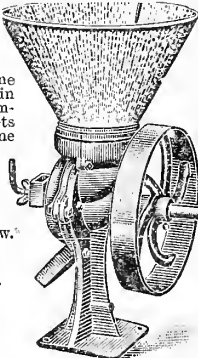

A very efficient small grain grinder for engines from 1 1/2 to 4 H. P. Has a slide for regulating feed same as the large grain mills. Comes complete with two sets of 5 1/2" burrs, one fine and one coarse. Can be furnished with cast iron sub-base 6" high and a 15-lb. balance wheel at the extra prices quoted below. F. O. B. Waterloo.

2C00 As shown, only \$7.70

15-lb. balance wheel, extra \$1.50

Cast iron sub-base, like 2C11, extra, \$2.25

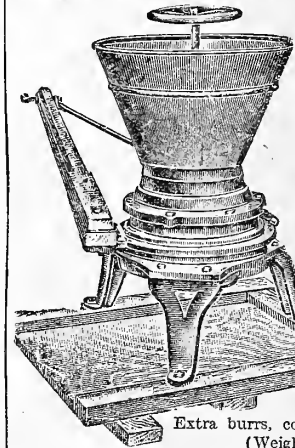

Extra burrs, weight 3 lbs., per set,90

HOW TO ORDER BURRS FOR YOUR MILL

We can supply burrs for any mills we have sold. When ordering give numbers and letter which appear on the back of old burrs. If no number appears give us name and address to which we originally shipped the mill and the approximate date so that we can identify it. The burrs will be shipped C.O.D. if requested but it is cheaper for you to remit with order for burrs priced on this page. Include postage if ordered by mail. See parcel post table in front of catalog for charges.

Triple Geared for Horse Power

Triple geared style, enclosed gears. Chilled steel bearings for pinions with convenient oilways. Breakers handle ear corn rapidly. Burrs can be changed for fine or coarse grinding while mill is in motion. With four revolutions per minute it will grind 20 to 40 bushels of coarse feed an hour. Can be furnished with fine or coarse burrs; coarse shipped unless fine specified. Weight about 600 pounds. F. O. B. Waterloo.

2C15

\$38.50

Extra burrs, coarse or fine \$4.50
(Weight 44 pounds.)

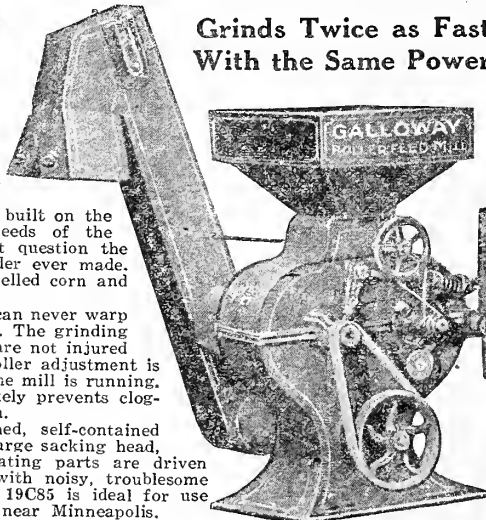

Our New Roller Mill For All Farm Grinding

A feed mill built like modern roller flour mills. Nails, bolts, stones, etc., in the grain cannot injure the grinding rollers. The upkeep expense is little or nothing even after years of service. It has double the capacity of any other mill which uses the same power. It is built on the roller principle, especially for the needs of the farmer and stock man and is without question the fastest and most economical feed grinder ever made. Will grind any kind of small grain, shelled corn and crush cob meal.

The main frame is fine gray iron and can never warp or strain under the most severe service. The grinding rollers are of special chilled steel and are not injured by stones or bolts in the grain. The roller adjustment is lever controlled and may be set while the mill is running. An automatic rotary force feed absolutely prevents clogging or choking by wet or chaffy grain.

Mills are furnished with an attached, self-contained ground feed elevator with double discharge sacking head, or without, as priced below. All rotating parts are driven by one main drive belt, doing away with noisy, troublesome gears, chains and sprockets. The No. 19C85 is ideal for use with tractor power. F. O. B. factory near Minneapolis.

6C55—Mounting Trucks with pole (no neckyoke or doubletrees); shipping weight 600 pounds 49.25

Two-Hole Power Sheller

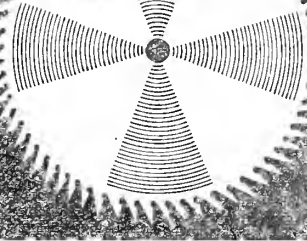

The self-feed is low down, making it easy to shovel into. This feeder is equipped with adjustable end casting so that the corn is always carried in a steady, even stream into the shelling mechanism. The throat will successfully handle any size corn without clogging or choking. Clean shelling without breaking the grain or the cob. The fan and shoe thoroughly clean the corn before it leaves the sheller, and take out all silk, chaff, broken cobs, etc., before the shelled corn is delivered into the sacker or elevator.

Capacity depends on power used, size and condition of the corn and varies from 50 to 100 bushels an hour. When used with a 6-horse power engine, this sheller will average from 65 to 80 bushels per hour when the corn is well dried. It requires 4 to 8 horse power and should be operated at a about 700 revolutions per minute. The regular pulley is 8 inches in diameter and has a 6-in. face, but other size pulleys can be substituted within reasonable limits when necessary to get the right speed.

You Can Easily Pay for This SHELTER by Doing Custom Shelling for Your Neighbors

CUT-OFF SAW BLADES

These blades all have 1 3/4 in. arbor hole for use with our regular saw frames. Best quality oil tempered saw steel. Blades can be used with a little less power than shown in table below if the operator does not try to cut too fast. Shipped from Waterloo.

Galloway Portable Elevator

New Improved Style at Very Low Price!

Why pay out the price of a Galloway elevator in labor charge unloading by hand when one season's savings on the husking bill will put this great labor-saving machine on your farm without cost? The Galloway Portable Elevator not only saves labor cost but gets the husking job out of the way quicker and helps you get your corn under cover before snow covers the field. This elevator is of substantial construction and careful workmanship. It will give years of satisfactory service at a minimum of expense, both in initial cost and upkeep. Never before have you had the chance to buy a corn elevator that leads the market in capacity, construction, strength and long life at such a moderate cost.

Description and Specifications

DERRICK: Is made of 2x4x12-ft. clear fir. Has ample strength to carry elevator leg. Is equipped with worm and gear for raising and lowering. Copperized steel cable is used instead of manila rope.

LEG: The elevator leg is 17 ft. long, made of wood except bottom which is of sheet steel. Width of leg is 13½ inches, carrying chains are No. 45 malleable, flights 2½x13 inches.

EXTENSIONS: 4, 8 and 10 ft. extensions can be furnished.

DRIVE PULLEY for engine power is 10x3½ inches. Shaft on lower end of elevator leg has square end if you want to use horse-power attachment.

HOPPER: Is 45x47 inches, giving large capacity. Is galvanized except bottom conveyor which is wood. Has flares on each side of hopper which add to its capacity.

Hopper can be folded for transport and owing to light weight can be easily moved from one place to another. Wood parts well ironed throughout guarantee long life regardless how hard you work it.

Galloway Steel Litter Carrier

A labor-saving device which should be part of the equipment of every barn. Load the carrier in the barn, run it out in the yard to dump in a Galloway Manure Spreader and do away with the unsightly, troublesome, wasteful manure pile. The quick removal of litter from the barn with this carrier means clean and sanitary conditions and healthy stock.

Frame is a one-piece channel steel, reinforced in the corners by braces, which gives great strength and durability. Latch is the best obtainable. It latches on both ends of the carrier and cannot dump accidentally. Wheels are fitted with steel roller bearings; true turned to prevent wobbling and insure smooth and easy running of the carrier.

The Galloway is equipped with a brake, an exclusive feature. The tub is extra heavy gauge galvanized iron. Prompt shipment of carrier and all equipment from Waterloo.

71C12—Five Bushel Carrier	\$17.95

*Complete anchoring includes ¾x8-ft. rod, post loop, clevis and 20 feet 11/32" carrier wire.

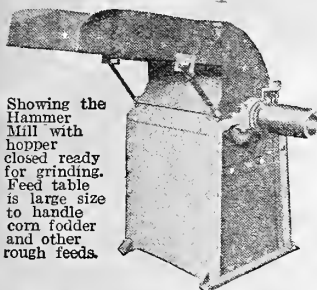

A Money-Maker for Feeders and Dairymen

For thorough, efficient, rapid grinding, the Galloway Hammer Mill is unexcelled. It is designed to grind anything grindable to almost any degree of fineness. Small grains, shelled corn, snapped corn, kaffir corn, alfalfa, straw, cornstalks, etc., offer no problem for this mill. The progressive dairyman or farmer will not overlook the advantage of this epoch-making product.

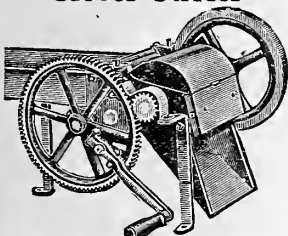

With the Galloway Mill, small grains are completely ground so that they can be thoroughly digested, which is by no means the case when whole grain or partly ground grain is fed. Corn fodder, and other roughage which, if unground, is, at least, partially wasted, becomes a desirable food and forms an important part in an appetizing, balanced ration. Mixed feeds, so essential for dairy cattle, can be easily prepared, and with this Hammer Mill, it is also easy to thoroughly mix the more concentrated feeds with the cheap roughage.

The grinding is accomplished by the hammers, revolving at a tremendous speed, striking the grain or material in mid-air, battering it back and forth until it is reduced to the necessary fineness required to pass through the screen used for this purpose. This principle reduces friction to a minimum, guarantees greater capacity for the power used — gives a finer ground product without heating the ground material, and all but eliminates upkeep expense.

Showing the Hammer Mill with hopper closed ready for grinding. Feed table is large size to handle corn fodder and other rough feeds.

Clover Cutter

Cuts either green or dry clover, alfalfa, vegetable tops, etc., into the 1/2 - inch length most suitable for poultry feeding. The 7-inch steel blades work against a hardened iron adjustable cutting bar, and are easily removed for sharpening. Has two corrugated feed rolls. For mounting on box or bench. Shipping weight 70 lbs. F. O. B. Wisconsin factory. No. 6C4—Clover Cutter ...\$12.95

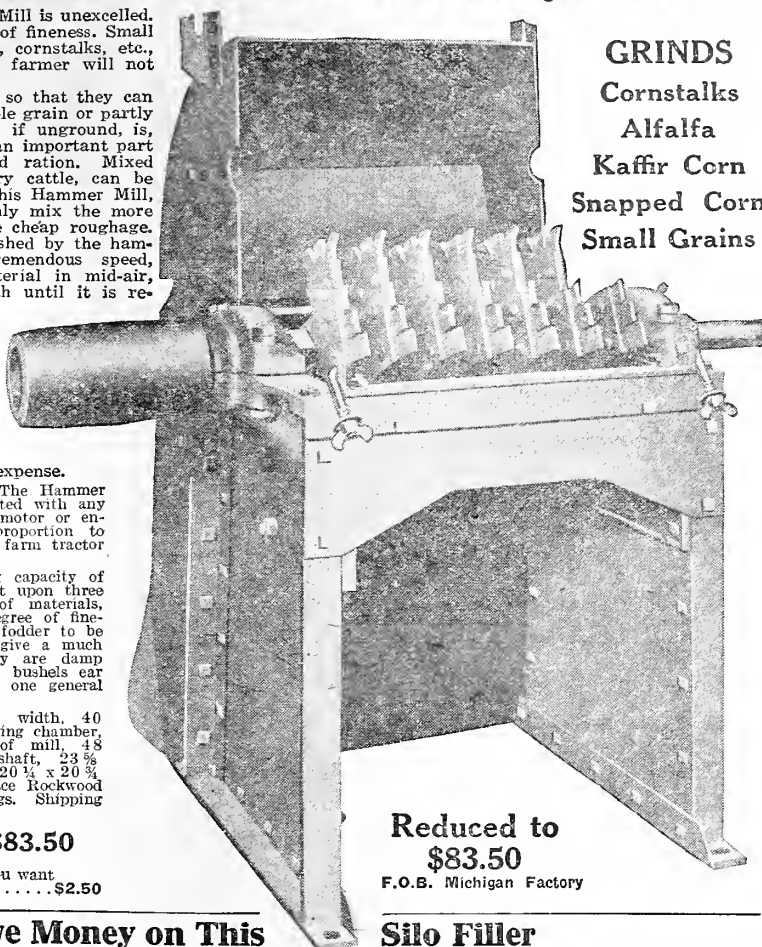

POWER REQUIRED — The Hammer Mill can be successfully operated with any power from a 7 to 30-H.P. motor or engine, grinding material in proportion to the power used. The average farm tractor supplies the ideal power unit.

CAPACITY — The grinding capacity of the Hammer Mill is dependent upon three important factors, condition of materials, amount of power used and degree of fineness desired. If the grain or fodder to be ground is dry, the mill will give a much greater capacity than if they are damp and tough. Grinds 30 to 60 bushels ear corn per hour. Shipped with one general purpose screen.

DIMENSIONS — Over-all width, 40 inches. Height to top of grinding chamber, 39 inches. Over-all length of mill, 48 inches. Height to center shaft, 23 3/4 inches. Anchor bolt centers 20 1/2 x 20 3/4 inches. 4 1/2" diameter, 8" face Rockwood pulley. S. K. F. ball bearings. Shipping weight, 400 pounds.

Power Cutter

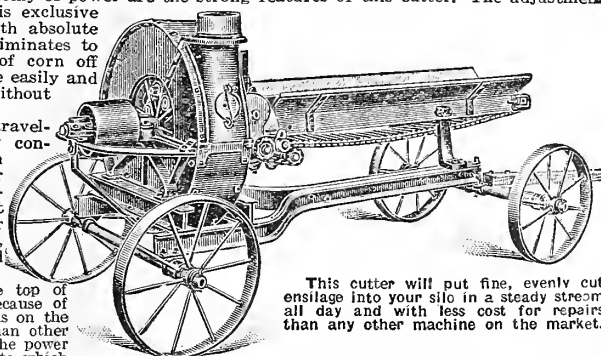

For stock feed cutting. Makes spiral shearing cut. Has four cutting edges, all of which can be used before re-grinding. Sliding cone gear can be quickly moved to change cut. Large feed table and throat for easy feeding. Cuts 1/4" to 1" or 2" by removing two opposite knives. Four 11" knives; 12x4 pulley, 400 r. p. m. Takes 1 to 2 H.P. Cuts 2 to 3 tons green fodder per hour. F.O.B. Wisconsin factory. No. 6C11—Weight 400 pounds, each\$41.80 Crank for hand operation. 4 pounds 1.25

Save Money on This

In offering this Silo Filler to our customers we have taken pains to select a machine which will in every respect merit the Galloway guarantee that it must satisfy or you may return it. Durability, simplicity of construction and economy of power are the strong features of this cutter. The adjustment of the knives to the shear plate is exclusive and insures lightness of draft with absolute uniform length of cut. It also eliminates to the greatest extent the shelling of corn off the cob. The cutting blades can be easily and quickly removed for sharpening without disturbing their adjustment.

This cutter is furnished with a traveling feed table of large capacity controlled by a lever within easy reach and can be stopped, reversed or advanced as you wish with absolute safety. The cutter operates at low speed compared with other machines of similar construction, giving long life to the cutter and greater safety to the operator.

This cutter elevates silage to the top of the highest silo with perfect ease because of the powerful blast created by the fans on the flywheel, operating with less power than other machines of similar rated capacity. The power is applied directly to the main shaft to which the knives and fan are attached. No loss of power through complicated gearing. Built of iron and steel.

This cutter will put fine, evenly cut ensilage into your silo in a steady stream all day and with less cost for repairs than any other machine on the market.

Guaranteed Replacement Batteries for **FARM LIGHT PLANTS**

The Heart of the Light Plant

Galco batteries fill an important part in connection with privately owned isolated electric plants as used on the farm, creamery, and country homes. Such plants consist of an engine driven generator and a storage battery. The storage battery gives to these plants not only reliability but economy of operation, because current can be taken direct from the battery when the load is not large enough to economically run the generator. The battery and generator can both be used for peak load requirements when an unusually heavy current is required. Should it be necessary to stop the generator equipment the Galco battery is ready to take over the load and give uninterrupted service.

High Quality Plates

Extreme care is given to the raw materials entering into Galco plates. The plates are properly considered the heart of the battery. From making the grid which is the molded lead structure that supports the active plate materials to the formed or complete plate all materials used must conform to our specifications as determined from research, and are carefully tested to be sure they are of uniform quality.

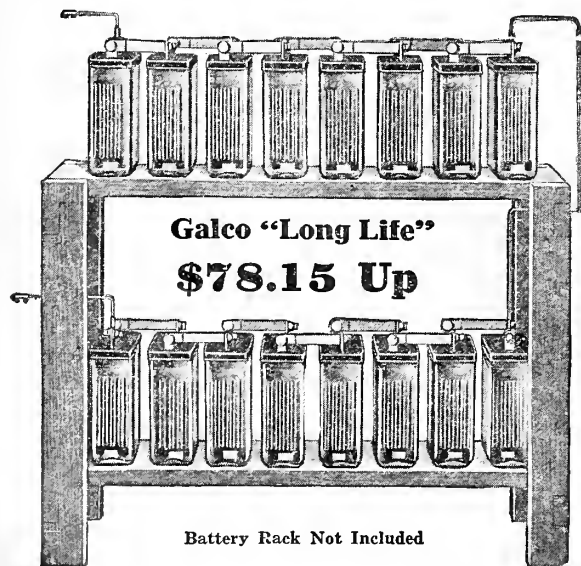

General Design

Care has been taken to avoid freakishness of design in these batteries in favor of adhering to a construction that has proven correct through actual field experience, which tends to prolong the life of the battery. For example, there is an unusually large volume of acid where it has the greatest circulating value, and a much longer working period without the necessity of refilling to replace loss of solution through evaporation and gassing. This is an important feature since low solution causes an internal discharge and is injurious to the plates.

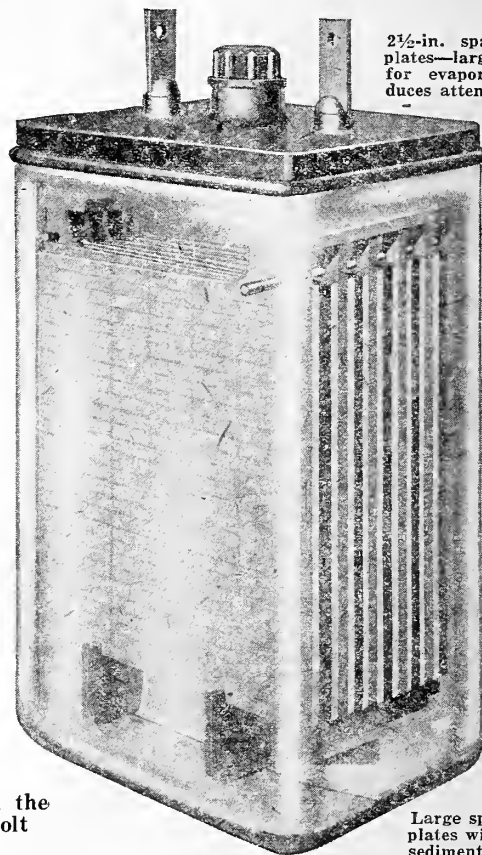

All Galco cells have substantial lead straps, so constructed that cell polarity cannot be reversed in connecting. A plus sign is stamped in each positive strap and a minus sign into each negative strap. Formed lead links are provided for connections between cells. Lead covered nuts and washers are used to connect the links to the cell straps, so that no metal other than lead is exposed to the corrosive action of the acid. This construction permits easy flow of electric current and prevents a high resistance between cells which would cause heating and a loss of energy. Simplicity of connecting also results and the only tool required is an ordinary wrench.

For Many Uses

Galco batteries of this type can also be used as a source of direct current supply for program clocks, signal and time recording installations. They are made in a sufficient variety of sizes as shown in the following specifications to meet the requirements of any make of lighting plant.

life of battery.

Prices and Specifications

The three smaller units are recommended for replacement where the plants are used only for lights, vacuum cleaners or fans. The larger sizes should be used where any resisting opposition such as flat irons, toasters, heaters or motors of ¼ H.P. or more are used in addition to the lights. The larger sizes last longer between chargings and have a longer life also. The numbers 31C107 and 31C111 are used for replacing seven and thirteen-plate Delco batteries unless you wish to increase the capacity of the plant.

All batteries are carefully packed and include cell connectors, lead bolts, four terminal connectors and hydrometer. Battery rack shown is not furnished. Shipped from factory near Milwaukee. Sixteen cell battery for 32-40 volt service.

The Great Aladdin Oak Heater

It Is Truly a Wonderful Bargain!

If you are looking for real value in a heating stove, for the greatest possible amount of heat, comfort, cheeriness, and fuel economy for every penny invested—then you have found here exactly what you want in this

Aladdin Oak Heater

It is sturdy and strong—over 200 pounds of the highest quality gray iron and Wood's cold-rolled refined steel. Well and carefully made by expert stove makers and absolutely guaranteed in every part. The various parts fit together in pocket joints which are air-tight and gas-tight. It is a handsome stove, too, big and strong in appearance, with many shining parts of triple-plated nickel. The mica in the feed door casts the glow of firelight into the room. Under the nicked-iron urn is a top which can be swung aside to disclose a removable lid where you can boil water or brew tea or coffee most handily.

Fire Pot and Grates The fire pot is corrugated to give it greater strength and more heating surface. Made of very heavy iron, it holds heat for a long time and will last for years longer than an ordinary fire pot. The grate shakes right and left, throwing ashes and clinkers to the center. These are then dumped to the ash pan by pulling out center draw-section a little way. The fire pot is big—16 inches inside diameter—and 18 inches on the bigger size. The stove has regular size 6-inch pipe collar and the size of the fire door is 10x14 inches.

Magazine \$3.50 Extra If you burn hard coal you can get a fuel magazine for \$3.00 extra. This holds a supply sufficient for many hours and makes your fire self-feeding and relieves you of most of the care of it. This stove will burn soft coal, coke, wood, coals and lignite just as it comes without the extra magazine—but you will have to have the extra magazine if you want to burn hard coal in it.

Low Freight Rates The Aladdin Oak can be shipped quickly to your home at a remarkably low cost; in fact, the freight rates are so low that you need scarcely consider them. \$1.00 freight charges will take the stove almost 300 miles.

De Luxe Cabinet Heater \$51.75

Heats Like a Furnace But Looks Like a Phonograph
BURNS ANY FUEL

The DeLuxe Heater burns any fuel: hard coal, soft coal, coke, wood or lignite. All its joints are tight so there is no danger of gas leaking into your home or ashes sifting out on the rugs. The smokepipe can be run directly from back of stove to the flue so that it does not show at all.

It takes up a minimum amount of space because of its square shape. The outer shell never gets real hot—only pleasantly warm. You can sit next to it without being uncomfortable, or you can place furniture close beside it without danger of scorching it.

A STOVE WITHIN A STOVE

Here is the most up-to-the-minute heating stove that has ever been bought—positively the latest thing in heaters. This stove is really a small furnace, because of the way it operates. It is a stove within a stove, with the fire burning on the inside. Air enters at the bottom between the two stoves, is heated and pours out through the big register at the top, furnishing ample healthful circulation of warm air throughout your rooms. You have the benefit of a furnace at the price of a stove and ornamental as a phonograph or radio.

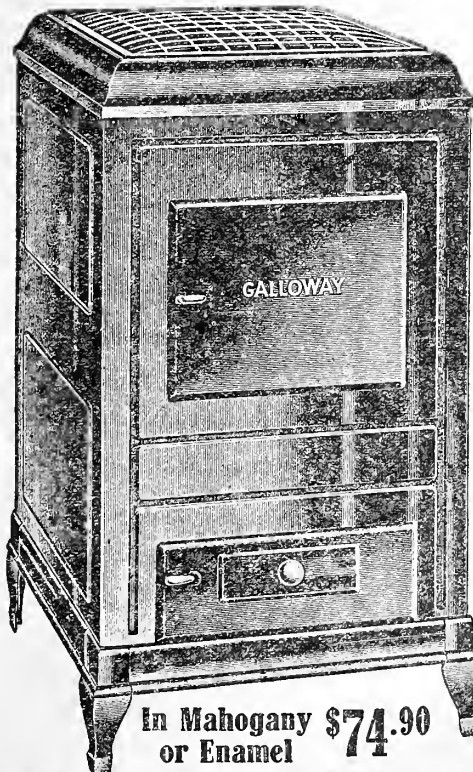

LOW FREIGHT

Transportation cost on this stove is small. We can ship it 200 miles for about \$1.60. Exact freight on it to your station furnished upon request.

Description: The DeLuxe Heater stands 4 feet high, by 25½ inches wide. The register or top is 20 inches square and feed door is 10x11½ inches with big 16-inch fire pot. Pipe collar is for 6-inch pipe and shipping weight only 395 lbs. Shipped from factory in Michigan.

TERMS
If you order a stove on credit terms be sure to fill out statement on back of order blank.

De Luxe Heater Features

REGISTER

The big square register through which the heated air escapes into your rooms has a gently curving top. The whole register can be lifted out easily, if it is desired to get at the inner stove.

FIRE DOOR

The fire door is very large—10x11½ inches—so that you can put in big chunks of fuel very easily.

HOT BLAST

Inside the feed door is a hot-blast attachment. By turning it on an added supply of heated air is drawn over the surface of the fire. This gives more complete burning and produces more heat, particularly when soft coal is used.

SMOKE APRON

There is a smoke apron inside the feed door which prevents smoke from coming out into your rooms when you open the door to put in more fuel.

WATER PAN

In the back where it is easy to get at, but out of sight, is a large water pan which should be kept filled. This water is absorbed by the heated air which does not dry up your lungs nor your furniture.

LEG BASE

The DeLuxe Heater is set on a sturdy leg base which elevates it off the floor several inches. This allows you to clean under it very easily and at the same time permits the cold air from the floor to enter the stove and be heated.

FIRE POT

The fire pot is of very heavy cast iron of the highest grade and is guaranteed to give years of satisfactory service without warping, cracking or burning out. It has slanting walls which prevent the accumulation of ashes and adds materially to the life of the fire pot.

GRATES

The combination shaking and draw-center type of grate is used. It is the best type for burning all kinds of fuel. Ashes shake down into the roomy ash pit.

DRAFT DOOR

Draft is regulated by means of the draft door, inset in the ash-pit door. This draft door is opened and closed by turning the screw damper right or left. This is a very simple and neat arrangement and at the same time gives very accurate control of draft.

ASH PIT

An extra large ash pit reduces the amount of ash carrying and reduces danger of burning the grate on account of an accumulation of ashes beneath it.

A Winning Bargain-ALADDIN WINNER

Warming Closet

A big two-door warming closet is a handy place to keep dishes hot. The drop door, when open, makes a handy shelf for drawing them out.

Splasher Back

Splasher back is of Arnicco iron, white enameled. The smoke pipe is carried behind it. This improves the appearance of the stove and increases room on cooking top.

Cooking Top

There are six cooking holes. One of them has a multiple lid. All lids and sections of the top are heavily reinforced against warping.

Fire Box

Fire box is extremely strongly made. Linings are very heavy and will last for many years. This is a special hot-blast fire box which makes it very economical of fuel and burns soft coal almost without smoke.

Grates

Let us know what kind of fuel you use regularly and we will send you the grate especially adapted to it. There is no extra charge for this.

Reservoir

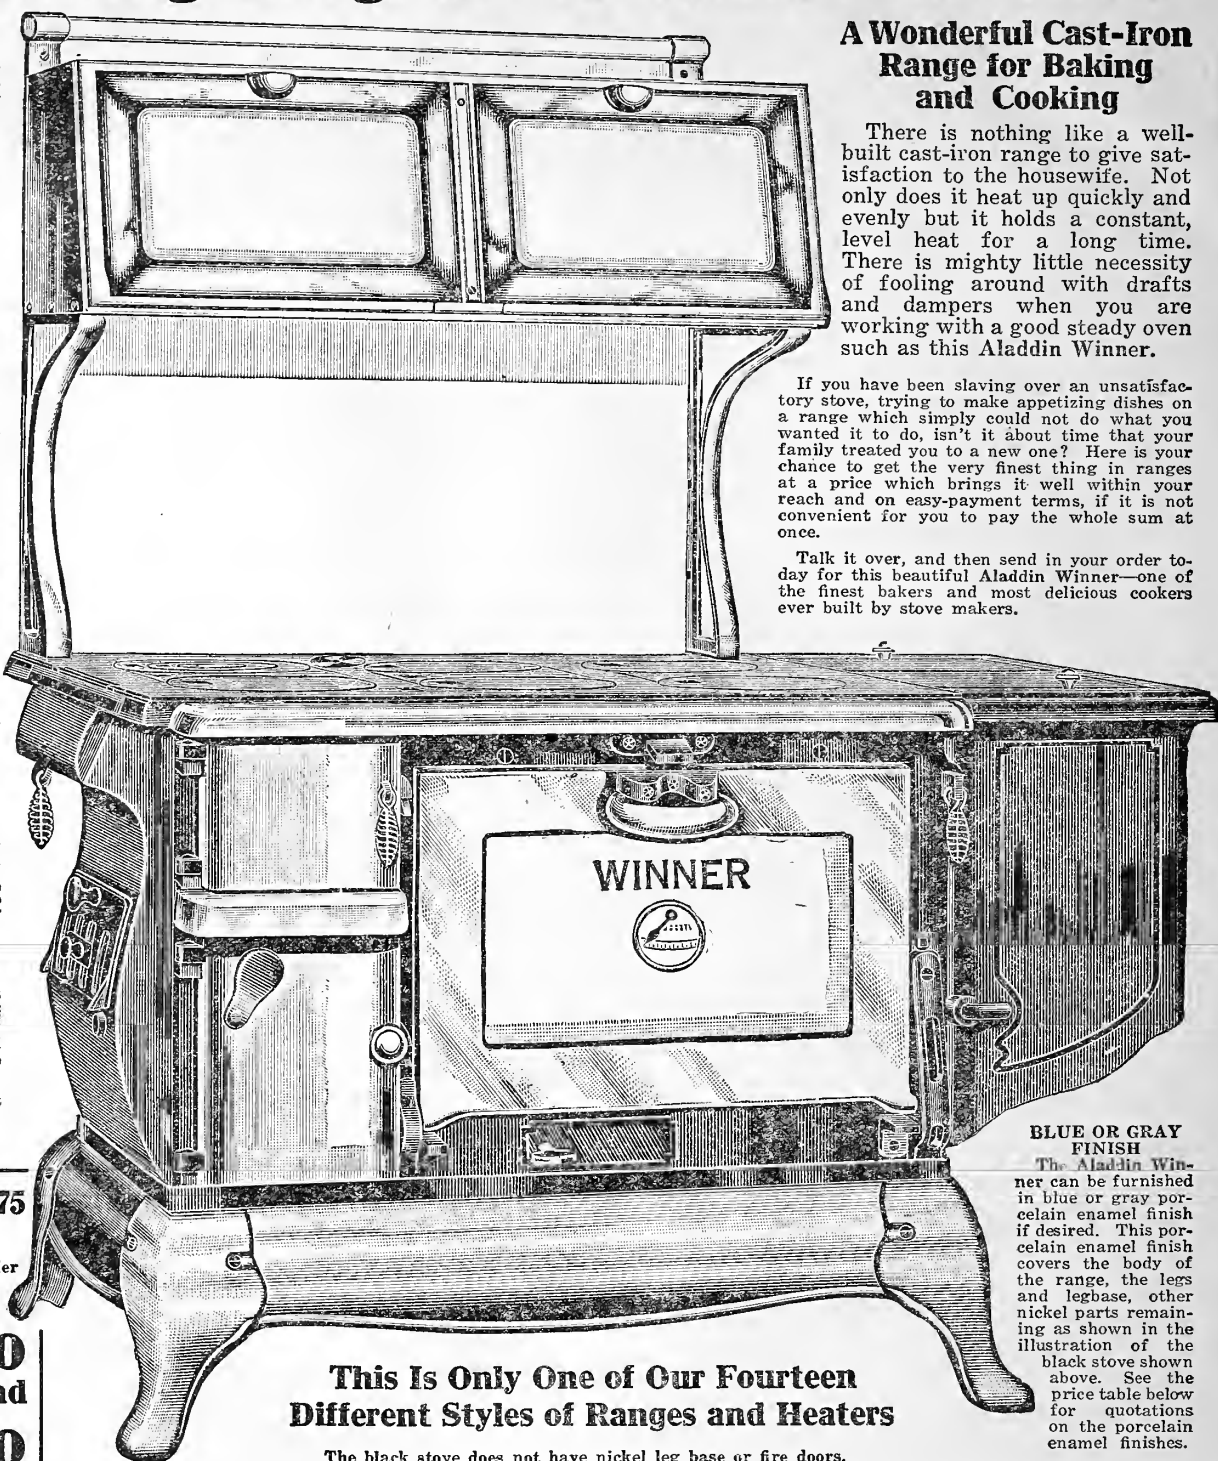

Twenty-six-quart reservoir gives you a big supply of hot water at all times, heated directly from the flue. Galvanized inside and out and therefore cannot rust.

A Wonderful Cast-Iron Range for Baking and Cooking

There is nothing like a well-built cast-iron range to give satisfaction to the housewife. Not only does it heat up quickly and evenly but it holds a constant, level heat for a long time. There is mighty little necessity of fooling around with drafts and dampers when you are working with a good steady oven such as this Aladdin Winner.

If you have been slaving over an unsatisfactory stove, trying to make appetizing dishes on a range which simply could not do what you wanted it to do, isn't it about time that your family treated you to a new one? Here is your chance to get the very finest thing in ranges at a price which brings it well within your reach and on easy-payment terms, if it is not convenient for you to pay the whole sum at once.

Talk it over, and then send in your order today for this beautiful Aladdin Winner—one of the finest bakers and most delicious cookers ever built by stove makers.

ESTIMATED FREIGHT

Dayton, Ohio \$2.73
Rochester, Minn. 3.50
Topeka, Kan. 7.45

Exact freight to your station furnished upon request.

This Is Only One of Our Fourteen Different Styles of Ranges and Heaters

The black stove does not have nickel leg base or fire doors.

The oven of the Winner is one of its strongest points. Flues lead the heat from the fire over, around and under it. As a result the whole oven heats quickly and evenly. You can bake in any part of it and be sure that you are not in danger of underbaking at the bottom or burning at the top. The cast iron of the oven radiates an even flow of heat into every corner. Baking and roasts from this great stove will give you new pride in your ability as a cook of delicious dishes. The oven is kept fresh at all times by a patented ventilator which removes all moisture and odors, keeping the oven air dry and fresh. The draft con-

trols are in front, where they are easy to handle. They, and the oven door thermometer, make it a simple matter for you to hold your oven temperature just where you want it.

You have never cooked before as you will find you can cook with the Aladdin Winner. There are six cooking lids in the rooney top; specify whether you want 8-inch or 9-inch lids. The big oven is 20 inches wide, 20 inches deep and 13 inches high. Fire box takes wood 21 inches long. Pipe collar size 7 inches. Shipping weight 600 pounds. Shipped from factory in Michigan. Water Front, \$4.40 extra; Polished Top, \$4 extra on black stove.

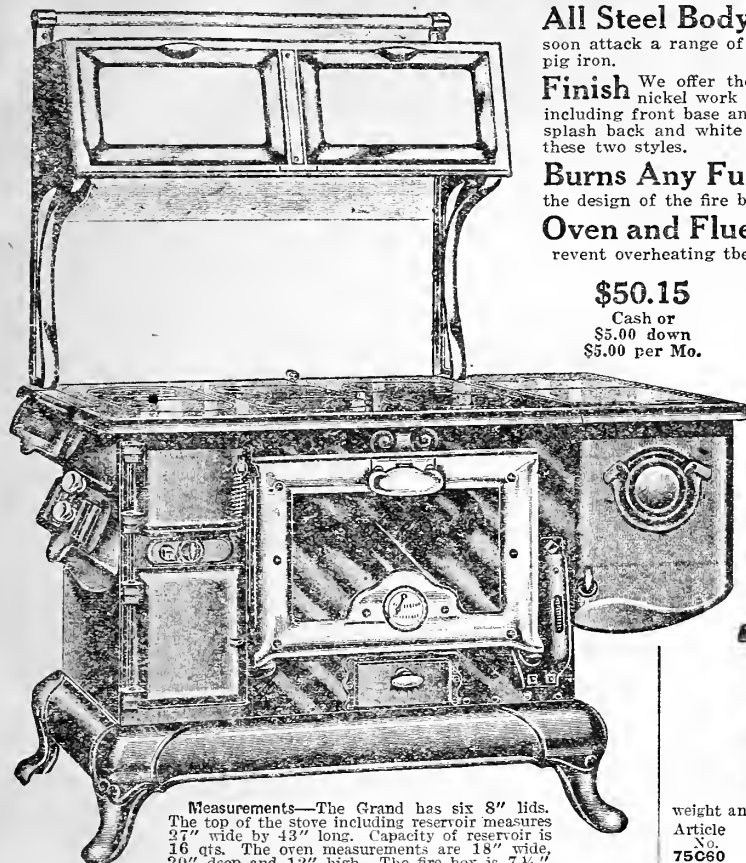

BLUE OR GRAY FINISH

The Aladdin Winner can be furnished in blue or gray porcelain enamel finish if desired. This porcelain enamel finish covers the body of the range, the legs and legbase, other nickel parts remaining as shown in the illustration of the black stove shown above. See the price table below for quotations on the porcelain enamel finishes.

This stove can be furnished in blue or gray porcelain enamel body, legs and base. See price table.

A Quick-Heating Steel Range--Galloway Grand

All Steel Body

The steel used in the Grand is a special alloy containing copper. This enables it to withstand the rust and corrosion which would soon attack a range of ordinary steel. Cast-iron parts are heavy mouldings of the purest pig iron.

Finish

We offer the Galloway Grand in two styles of finish—one with triple-plated nickel work as shown in the picture, the other style with complete nickel trim, including front base and front legs, doors, etc., and also including white porcelain enamel splash back and white porcelain enamel high closet and oven door. See prices below on these two styles.

Burns Any Fuel

Supplied with a perfect combination grate which burns hard or soft coal, wood or coke with equal ease. The quick heating and the design of the fire box combine to make this range most economical of fuel.

Oven and Flues

revent overheating there.

The oven is suspended in the flues, with heat pouring all over, under and around it. The top is covered with plaster of paris to absorb heat and radiates it evenly into all parts of the oven. Oven is equipped with patented ventilator, non-slam over door, accurate oven-door thermometer. It is a fast, dry, even baker.

The flues of the Grand are lined with asbestos riveted between steel plates. The asbestos cannot curl up or peel off, and it keeps the heat where it is needed—against the oven and the cooking top. This flue leads the heat all around the big square oven, insuring a fast and even-baking oven. For quick lighting of the fire there is a direct draft from fire box straight to the chimney, which brings up your fire in "jig time."

Wash the Easy Way

The most popular type of washer and the most generally satisfactory for farm use that we have ever sold. Thousands of our customers all over the United States will testify to the excellent construction of this machine which makes it wear for ten and fifteen years or longer, without repairs.

The tubs of all three styles of machines shown on this page are built of selected southern red cypress, the staves being sealed with hot glue and bound together with three rust-proof steel hoops. Every tub is carefully inspected before being sanded and varnished to make sure that it is free from all flaws or defects. It is then sand papered, painted and varnished with durable and water resisting varnish.

The tubs on our New Power Washer below and the Twin Tub Washer at the left measure 21 inches across the top, 23 inches at the bottom and are 13 inches deep. Corrugation extends the full length of the staves and covers the bottom. This corrugation with the wood dolly, as pictured below, gives the closest possible approach to hand rubbing and eliminates all of the hard work from wash days.

The power wringer is operated by concealed gears and swings to and locks above any tub. The wringer may be turned to any one of three positions and locks automatically at each quarter turn. When the lid of the machine is raised the dolly is automatically thrown out of gear and stops turning while the engine continues to run and operate the wringer. When the lid is dropped the washing action automatically starts again.

The wringer runs either forward or backward, has a lever at the top to reverse or shut off, which is in easy reach of the operator. Safety device on the top of the wringer bar releases the tension on the rolls instantly if necessary. Only the best quality, long-lived soft rubber is used on the rolls and the wringer frame will not warp or spring out of shape. Specifications for the Twin Tub Washer are exactly the same as the New Galloway Power Washer, given below at the left, with the addition of a second power tub.

Floor space required, 27x64 inches. Shipping weight about 375 lbs. F. O. B. Illinois factory.

Popular Bench Type Washer for Engine Power

See also description of our Double Tub Washer, which is the same machine with another power tub.

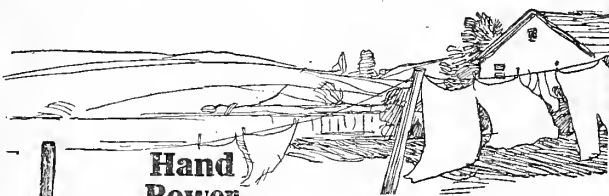

Steel frame for this washer is 16 inches high, 27 inches wide and 54 inches long, providing ample space for the rinse tub in addition to the washer itself. Two extra tubs may be placed at the side of the machine and the swinging wringer provides power to wring also from these rinse tubs. Drive pulley for the gasoline engine is 16 inches in diameter and should turn 140 revolutions per minute. The tub is easily drained from the bottom. Platform and wringer posts are very strongly constructed and rigidly braced. All gearing is mounted beneath the tub, as shown in the illustration, to avoid accidents to person operating or to children. This washer is so carefully constructed and excellently designed that it will not tear the finest fabrics but will wash perfectly everything from a lace curtain to a heavy rug. Shipping weight about 250 pounds.

No. 7C3—Engine Power Washer, F. O. B. Illinois factory, only

No. 7C3C—Washer as above with 1½ horse power Handy Andy Engine and belt—reduced to only

\$74.80

Hand Power Washer

\$16.75

Easy to operate and takes the labor out of the old-time way of washing. Operates with the same reliable principle as the other two washers shown on this page. You can put the finest fabric in the tub without fear of injury and it will wash them as clean as you could by hand on the board.

Only the highest quality materials and most careful construction and finish are permitted in turning out this machine. The double lever with walking beam connection not only equalizes the power but gives greater speed to the agitator than any other high speed washing machine. The ball bearings used are simple and are set in vaseline so that they will not require oiling for years.

The tub is made from everlasting selected southern cypress, water resisting and heat retaining, finished on the outside with best quality varnish. Tub is 22 inches in diameter at the bottom, 20 inches at the top and 13 inches deep. It holds six sheets or the equivalent.

ALUMINUM DOLLY

Our Aladdin Queen Washers are now equipped with the new scientifically constructed cast aluminum dolly, illustrated at right. Actual working tests have proved that this dolly washes 25 per cent faster than the old type wood dolly.

Aladdin Queen Washers

One of the most finely constructed and excellently designed washers ever placed on the market. Every part is of excellent material and workmanship, perfectly fitted and of unusual strength. With ordinary care this washer will give you satisfactory and efficient service for many years.

The gears are all excellently cut, smoothly machined and completely enclosed in oil-tight cases. They are then packed in hard oil which insures smooth and quiet running and eliminates wear. All of the power mechanism on each of the four styles of machines is under the frame and out of the way which insures safety.

The power driven, swinging wood wringer locks at any position desired. It has extra wide reversible drain boards and may be used for rinsing while the washer is running. It has large 12-inch rubber rolls that will wring any material from light fabrics to heavy bedspreads, and is equipped with a safety release lever to instantly release the tension on the rubber rolls.

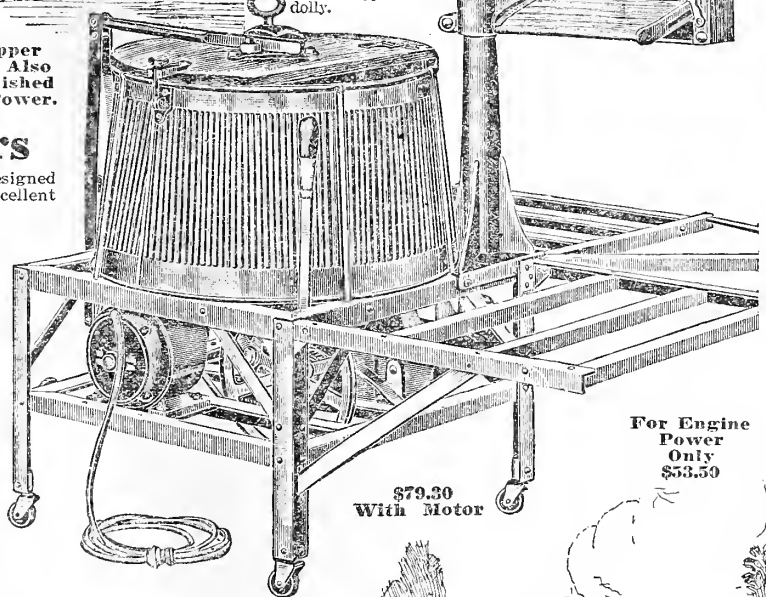

Built with either wood or corrugated copper tubs in both engine driven and electric styles. The engine power washer as shown above is not fitted with electric casters. All types of this machine have a large three-tub stand which folds down completely against the main tub stand. Engine driven machine weighs about 240 pounds. Shipped promptly from Illinois factory.

The New Supertone-Six

THE SUPERTONE-SIX is Galloways latest contribution to the radio audiences of America. A few months ago it was called impossible to produce a six-tube set with all the latest improvements at a price of receivers of ordinary quality. BUT IT HAS BEEN DONE. The Supertone-Six is quality-built throughout—built to last—built to perform—of finest materials and with the best precision instrument.

Six tubes—two-dial control—makes its operation very simple and yet remarkable for its purity of tone and faithful reproduction. Forty stations in one evening is not unusual. Your favorite "jazz" band can be heard loud enough for dancing or your favorite orchestra can be made to play as soft and low as you wish.

The Supertone-Six is guaranteed to bring in the overtone and the middle tones as well as the rich tone of the deep bass. It has volume and power to spare. The front panel is genuine Bakelite, size 7x18 inches, beautifully but plainly engraved with two large Vernier dial controls; easily operated by the small knobs below. The Supertone-Six set is shown in the Model X Console to the right but it can be had in any of our cabinet models.

THE MODEL X CONSOLE shown here contains ample space for all batteries as well as charger, which are reached from the rear. The cabinet is of substantial construction and the entire top is lined. One of the best loud speaker units is built into this cabinet and concealed by an ornamental grill. The outside dimensions of the cabinet are 31 inches in length by 37 inches high and 13 1/2 inches deep. The decoration of the cabinet is neat but striking and produces an inland effect.

Galloways' New Economy Bedroom Suite

A handsome bedroom suite in a variety of finishes at new low prices which bring it within reach of every purse. These pieces may be purchased separately or any desired combination of pieces that is wanted. Sturdy hardwood construction in a charming new pattern, shown for the first time this fall. Edges, iron rails, etc., of all pieces are attractively moulded and the legs and mirror standards are very neatly turned in the very latest style. The construction is very sturdy and dependable; made of selected woods perfectly seasoned and kiln dried. All mirrors are of genuine plate glass.

FINISHES—In keeping with the modern trend toward colorful furnishings we offer this handsome set in several finishes in addition to the standard American Walnut finish. Choose also Jade Green, soft-toned Fawn or our own blending of these two attractive shades in a beautiful two-tone finish. Unless otherwise stated in your order we will ship the walnut finish. All prices f. o. b. Arkansas factory.

Princess "Art-Line" Bed, Complete \$26.65

One of the most striking and distinctive designs ever shown in a metal bed. The close-up view at the lower right illustrates the distinctive note struck by the Aladdin Art Line molding of pillars and cross rods. Constructed throughout of seamless tubing, spot welded at the joints for strength and durability, light and graceful in design with solid steel panels at head and foot, decorated in floral design.

The distinctive beauty of this graceful bed model is enhanced by the highly attractive and hand-rubbed wood finish in high-lighted American walnut. This feature so closely duplicates the natural grain and appearance of this costly wood as to deceive the eye. It is absolutely permanent and will not chip or wear off. The bed is 50 inches high at the head, 34 inches at the foot. Pillars 1½-inch Art Line, cross rods 1x1½-inch Art Line; fillers 1½x1½-inch Art Line. Solid panels with decorations at head and foot 12x24 inches. Width 4 feet 6 inches. Complete outfit or bed only, shipped from Waterloo.

How Much Paint to Order

One gallon covers from 250 to 300 sq. ft. of square surface with two coats. Measure the length, width and height of your building, add the length of both sides and both ends, multiply by the height of the building which will give you the number of square feet to be painted. For example, a building 20 feet wide and 30 feet long and 25 feet high would figure as follows:

Front and rear ends—20 feet each....	40 feet
Both sides—30 feet each.....	60 feet
	100 feet
Multiply this by height	25 feet
	2500 sq. ft.

This means that there are 2,500 square feet to be painted and to find out how many gallons it will require divide 2,500 square feet by 250 square feet. The result is 10, so that it will require 10 gallons to cover a building of the above dimensions, two coats.

GUARANTEE

We guarantee GALLOWAY READY-MIXED PAINT to be made of the best materials, to wear, spread well and not to peel, chalk or blister. That one gallon will cover from 250 to 300 sq. ft. of surface, two coats, according to the condition of the surface. We will furnish new paint free in case any GALLOWAY paint fails to come up to our claims where reasonable care has been used to apply it.

GALLOWAY'S
RED BARN PAINT

GALLOWAYS BARN PAINT

Did you know that an ocean going vessel often receives two or three coats of paint from stem to stern for a single voyage? Without paint, the elements quickly work havoc.

What about your barn, your corn crib, your implement sheds and other buildings? Are you letting them suffer for a saving coat of paint?

It is not only a matter of improving the looks of your premises but good paint actually increases the money value of your property. It is good insurance, and the cheapest kind of insurance, too. Save the surface. It costs you more to neglect painting than it does to paint regularly.

Galloway Mineral Barn Paint is most durable, being made of superior ingredients throughout. It is an absolutely waterproof coating and recognized as a durable, natural preservative of wood.

This mineral barn paint is also adapted for shingles, iron roofs, structural iron roofs, barns, elevators, posts and timbers which go under ground.

THE HEATING SYSTEM

All Galloway Incubators are heated by a properly designed hot water equipment. This includes a genuine non-rust, pure copper boiler and tubular tank, which absolutely guarantees satisfactory service during the life of the incubator. The tubular tanks used to heat the larger sizes have one or more cross pipes to obtain the desired uniform temperature in all parts of the egg chamber.

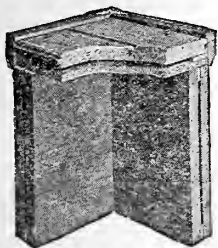

THE REGULATOR AND THERMOSTAT

The expansion and contraction of the wafer raises and lowers the regulating rod on top of the incubator. On the end of this rod there is a damper suspended above the boiler. When this damper is raised, the heat of the lamp escapes and the water in the boiler cools. When the damper rests on the boiler, all the heat is utilized in heating the water. This cooler or hotter water circulates through the tubular tank in the egg chamber and the eggs are heated to the exact temperature at which the operator adjusted the regulator. The Ideal egg tray is built of the best materials and is strong and substantial. It will not twist nor get out of shape.

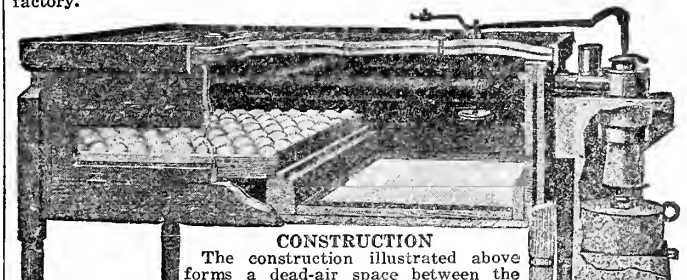

ALL INCUBATORS ARE COMPLETE

Please remember that when you buy a Galloway Incubator, you get a dependable hatcher with a tested heating system and all the fixtures and attachments necessary to operate the same successfully. This includes tested Tycoos thermometer, moisture guide, air cell guide and instruction book. In other words, when you buy a Galloway Incubator you have no extras to buy, and you have equipment that is well made, and guaranteed to give you satisfaction in every particular. All incubators shipped from Illinois factory.

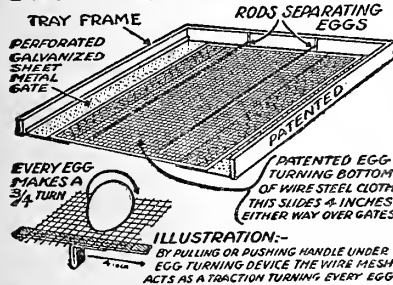

Double Wall Redwood Case

We make incubators to hatch strong, vigorous chicks and in large numbers. To be frank about it, our incubators are made to imitate nature and to beat the old hen out of a job. You can buy incubators that cost double the price that we ask for the Galloway, but no incubator, no matter what the price may be, is built better and will not hatch equal to the Galloway. Note illustration at right which shows that both walls are made of ¾-in. thick California Redwood with ¼-in. dead air space between. Heat and cold cannot penetrate the walls. Top is double in construction, is ¾-in. tongued and grooved Redwood; under surface is ½ in. thick, one-piece celotex. Between top and bottom is a ¼-in. dead air space. Top is protected on the edge by heavy molding and brass corners. Entire case is made by expert cabinet makers.

Sectional View - Side Removed

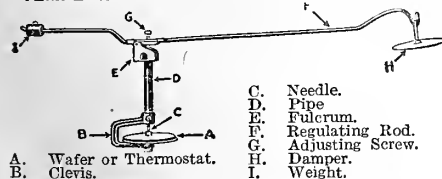

Easy-Turning Trays

Our new patented egg-turning trays eliminate the tedious work of turning the eggs by hand and experimental tests show 15 to 20 per cent increases in hatchings. Heavy rust-proof hardware cloth is used which holds the eggs without sagging. Trays are used more than any other part of the incubator; those in the Reliable are built of yellow Virginia poplar, which is tough and strong as hickory and will stand the hardest service. All sizes of our Reliable incubators have deep nurseries and nursery trays. Frames are covered with highest grade burlap, tightly stretched. Chicks can be dropped to the nursery when desired.

CONSTRUCTION

The construction illustrated above forms a dead-air space between the outer and inner walls, and prevents the outside changes of temperature affecting the temperature of the egg chamber. You will notice in the illustration that we have inside one inch thick California Redwood, next, one-fourth inch insulating wall board, and then the outside is finished with the best quality of five-eighths inch ceiling. The edges of the top are protected by a heavy molding which gives the incubator case a handsome and substantial finish. The doors are made of extra thick lumber, each door having two panes of glass with a dead air space between which prevents the cold outside air from radiating through the glass to the egg trays.

REGULATOR FOR CONTROLLING THE TEMPERATURE OF GALLOWAY INCUBATORS

Full Instructions Furnished Showing You How to Adjust the Regulator

THE HEART OF AN INCUBATOR

The hot water system of an incubator is in reality the heart of the machine. Nothing but pure copper used in its construction. Hot water circulates constantly throughout the entire heating system. Double locked seams positively will not leak. Hot water boiler with patented deflecting diaphragm which keeps water in constant circulation.

Even Greater Savings on Combination Equipment

It costs us the same to handle your order for one item as it does if it contains two or more items. As an inducement to you to look to The Galloway Company for ALL your poultry supplies we are offering for the first time combination prices on dependable Galloway Incubators and Brooders.

18C03A—Black stovepipe 4' dia., 24" long, slip. wgt. 3 lbs., each 20c

"Old Mother Hen" Coal Brooders

Built in two styles, both being automatic—heat controlled by double-wafer thermostat. Our patented By-Pass Draft in the "OLD MOTHER HEN" Brooder has taken years of determined effort to perfect. It affords a great improvement in draft control, making it easier to maintain a steady temperature and giving much greater economy from fuel.

Both types of brooders priced below have a removable baffle plate making it easier to clean the baffle and pipe when they become clogged with soot. Canopies are extra heavy 26-gauge galvanized steel, supported by heavy stamped ring, crimped edges. Construction throughout is rugged and substantial. Cast of the purest gray iron with all parts heavy to insure long life and trouble-free operation. Prompt shipment from factories near Quincy, Illinois.

"Blue Flame" Oil-Burning Brooders

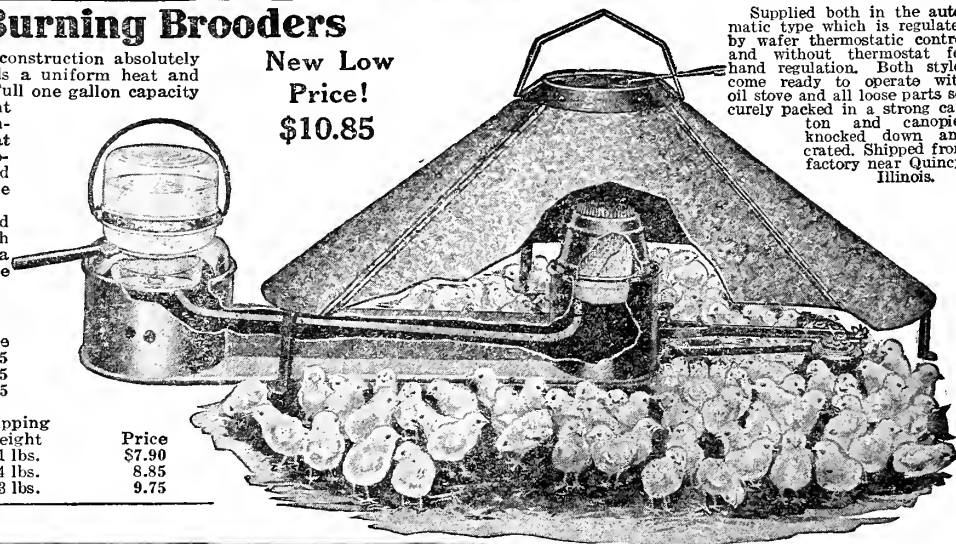

Safe and economical. Improved burner construction absolutely prevents harmful gases or fumes. Spreads a uniform heat and allows plenty of fresh air for the chicks. Full one gallon capacity in the heavy glass oil reservoir—sufficient fuel for 24 to 36 hours. The heavy galvanized steel canopy has a ventilating head at the top. Heater and fuel feed pipe are protected by sheet metal inclosure. Equipped with a hand regulator for adjusting the fuel feed level.

The wickless burner of the most approved pattern makes a blue flame which is both smokeless and fumeless. Generates with a long-lived asbestos lighting ring. One extra ring included with each brooder.

Both styles come ready to operate with oil stove and all loose parts securely packed in a strong carton and canopies knocked down and crated. Shipped from factory near Quincy, Illinois.

"Twin Blast" Drum Oil Brooder

No matter what oil brooders you have seen or used in the past, you have never seen an oil brooder as powerful as the "Twin Blast" Drum Type Brooder.

Here is the proof:

"Twin Blast" Burner. Extreme range from tiny candle-like jet to hot, leaping blast. Uses distillate, without priming. Will never go out as long as fuel is in tank. Saves 1/3 fuel cost.

Absolutely Automatic Control. Thermostatically controlled valve, super-sensitive to every temperature change. Assures maximum protection of chicks and maximum economy of operation.

Flame Travels 16 Feet. The flame must travel three full times around drum of heater. A total of 16 feet.

The "Twin Blast" starts on and burns ordinary distillate or furnace oil instead of high-priced kerosene. It will, of course, use kerosene equally well. This remarkable burner produces an intense blue white and pale yellow flame regardless of the rate of fuel consumption, and does not smoke. All the way from a tiny candle-like jet to a leaping hot blast consuming seven gallons every 24 hours, perfect combustion and economy. No other burner has this extreme range.

Protect Poultry Profits VACCINATE

To protect poultry profits. The scientific way to prevent and treat cholera and infections accompanying roup, diphtheria, colds, canker and other diseases.

FREE Alvin Mixed Bacterin from Galloway
40C1—40 doses, \$1.45; 40C2—200 doses, \$4.00; 40C3, 500 doses, \$7.50.

Majestic glass barrel syringe given with your order for 200 doses or more. Simple, easy to use. Produced in modern biologic laboratories and sold under guarantee of money back for every dose that fails.

BLACKLEG AGGRESSIN

Blackleg Aggressin is a liquid vaccine that is largely taking the place of the powder or pill form of vaccine.

This has been brought about because greater protection is given to the calf and the protection is more lasting. It is not necessary to vaccinate more than once during the life of the calf if Beebe Blackleg Aggressin is used.

40C4—10 doses (50 c. c.).....\$1.50
40C5—50 doses (250 c. c.).....5.85
Include 8c per bottle for postage.

40C6—All-metal syringe for Aggressin 1.50
Made by the nationally known laboratories of Dr. Beebe.

No. 526 — RETAINED AFTER-BIRTH

Retained after-birth is a distinct symptom of Contagious Abortion in cattle. It is caused by a diseased condition of the reproductive organs.

Do not allow anyone to remove the after-birth from a cow manually (by hand). This is dangerous and may result in ruining the cow as a breeder. It is impossible to remove all of the after-birth in this manner and the small pieces that remain will decompose and poison the whole system.

Cows properly treated with Dr. Beebe's Uterine Capsules will clean normally and no cow that is so treated will become barren (sterile) or fail to breed.

By their combined chemical and physical action, these capsules delay putrefaction and bacterial growth and bring about a loosening of the membrane from its internal attachment so that nature can expel it in a normal manner.

40C7—Box of 10 capsules (enough for one average case)\$1.95

Guaranteed Poultry Remedies, Postpaid

HAPPY HEN WORM REMEDY—For pale faced, light weight, always hungry birds; Happy Hen Worm Remedy destroys the worms without causing any harm to the birds; full directions on each package. Pkgs., 55c, \$1.10, \$2.50 and \$5.00.

Holds full rated capacity. Deep trough and turned edge prevent waste of mash. Very sturdily constructed with head on each section for strength.

16C37—60-lb. capacity, wt. 16 lbs.\$2.95

16C38—100-lb. capacity, wt. 22 lbs.\$3.65

Try the New Way to Kill Lice

A hen worried to death with lice cannot lay if she wants to. You might as well "throw money to the birds" as feed high priced food to lousy chickens. It's a dead loss—don't do it. Use "MITEMIST." No dusting, no dipping, no painting. HANG UP THE BOTTLE. It acts like magic. Testimonials from every State in the Union tell of wonderful results from its use. Simply put a few drops in and on roosts and hang uncorked bottle in the coop or hen house. Powerful fumes leave the bottle in vapor form, and penetrate feathers, cracks and crevices everywhere. Lice, mites, chiggers, bed bugs, ants, roaches, etc., have no lungs—they breathe through the pores of the body and are destroyed by "MITEMIST" vapors. It will not injure chicks. Bottle, \$1.00; 3 bottles, \$2.50; 1 gallon, \$5.00. All prepaid in United States.

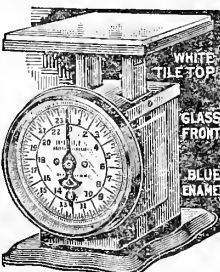

MONEY BACK IF IT FAILS.

POSTPAID PRICES

75C9—Only \$1.45

4 WAYS TO PAY

PLAN NO. 1—Cash with Order. Cheapest and best because it saves bookkeeping and gives you the lowest price.

PLAN NO. 2—Deposit. You deposit amount of order with your own banker while you are trying the machine. Have banker fill out and sign Certificate of Deposit "A" below. If you return machine he gives your money back and if you keep machine he sends money to us.

PLAN NO. 3—Note Settlement. If you don't have the ready cash, we will gladly furnish the credit for 3, 6, 9 or 12 months' time at 6% interest. Tell us how long a time you want and we will send our note for you to sign.

PLAN NO. 4—Monthly Installment. You pay 10% to pay. Send 9% down with your order and pay 10% per month for the next nine months. No interest or financing charge on this plan.

If you order on either Plan No. 3 or Plan No. 4, be sure to fill out statement at bottom of page.

About Returning Goods

It is always best to write us before you return any goods so we can give you proper shipping instructions because some merchandise must be returned to our factories located at point outside of Waterloo. We can then tell you the proper place to send the returned package and will be on the lookout for it so as to give it immediate attention and give you proper credit. Always write us a letter telling why the goods are returned, the date you sent them back and whether they are sent by parcel post, express or freight. If goods are returned by express or freight, be sure to send us the bill of lading or express receipt. Always have your name and address on the package or tag when returning goods.

Parcel Post Shipments

This map will show you in what zone from Waterloo your town is located. Approximate shipping weights are quoted on each article in our catalogs and circulars so that you can add up the total weight of your order and then use the parcel post table below and the map to figure the amount of postage to send if shipment is wanted by mail or parcel post. Be sure to allow sufficient postage—we will refund any balance due after paying postage and insurance charges on your order.

EXAMPLE

If you live in the third zone and order goods that weigh 10 lbs. by parcel post, the charge is 8 cents for the first lb. and 2 cents for each of the nine additional lbs.—(18 cents). Making a total of 26 cents.

Packages up to 70 pounds are carried in zones 1, 2 and 3; in all other zones 50 pounds is the limit in weight.	ZONE 1 Not over 50 miles from Waterloo	ZONE 2 Not over 150 miles from Waterloo	ZONE 3 150 to 300 miles from Waterloo	ZONE 4 301 to 600 miles from Waterloo	ZONE 5 601 to 1,000 miles from Waterloo	ZONE 6 1,000 to 1,400 miles from Waterloo
For weights up to 1 pound the postage is	7c	7c	8c	8c	9c	10c
For each additional pound or fraction of a pound, add..	1c	1c	2c	4c	6c	8c

GALLOWAYS'

FAMOUS BOX SPREADER

\$72.50

GALLOWAY NEW JIFFY LIME SPREADER

At last! There's a real one-man lime spreader on the market. The Galloway New Jiffy Lime Spreader is a wonderful machine at a low price. All steel construction—hardened bearings—will last a lifetime. It can be attached to manure spreader in 10 minutes' time and taken off as quickly. Only four bolts. Spreads wet or dry lime evenly 16 to 18 feet wide. Coverage regulated by depth of load in the box and also by spreader feed adjustment. All you have to do is to put half or two-thirds load of lime in your spreader and drive off down the field. The New Jiffy can be started or stopped from the driver's seat. You can regulate the coverage from the driver's seat. It cannot clog up and it spreads evenly all the time it works. Will fit the Galloway No. 8 Spreader, The New Idea Model 8, the McCormick-Deering and the Gehl. Be sure to state which make of spreader you have so we can send the correct brackets for attaching to your spreader frame. Price—New Jiffy Lime Spreader complete with sprockets and chain. Shipping weight 100 pounds, f. o. b. Waterloo.

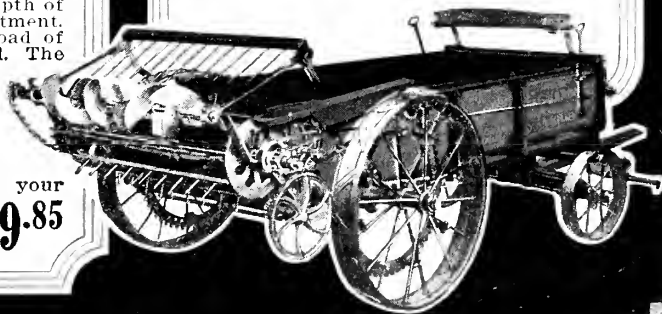

\$39.85

The Galloway Wagon Box Spreader is guaranteed to do a perfect job of spreading at less cost than any machine on the market. This Box Spreader comes complete ready to set on your own running gears—and will fit trucks with metal or wood wheels. It lifts right on and off the wagon trucks without taking anything to pieces—not even a single bolt to take out. Makes your farm gears available for this spreader or for other use at your will. Mud lugs for tires and drive sprockets to fit your wheels come with each Galloway Box Spreader at our low price of \$72.50. For complete description see page 48.

Big Low Down No. 8

Galloways' big capacity Low Down No. 8 is a wonderful spreading machine, built solid to the trucks—a one-piece machine. It has every worth-while feature found on any spreader—and many exclusive Galloway patented features not found on any other machine. Don't overlook our new auto steer type front axle and our new wide spread attachment, both described on page 47. The beater drives from both rear wheels. The spreader comes complete with tongue, doubletrees and neck yoke and is equipped with Alemite lubrication. For complete description and construction features see pages 44 and 50. Our low cash price is

6 Sec.	240	33	725	60.20	70.05	
38-in. Harrow Cart only, Wgt. 115 lbs.					10.85	

GREATEST HARROW VALUE IN AMERICA!

Galloways' Patented All-Steel Flexible Lever Harrow is worth twice as much as the old style—it is not only flexible, but teeth are adjustable to four positions, from straight up to slanting. It has more teeth—40 to the section—than any ordinary harrow and its flexibility permits it to go down in the hollows and over the ridges without skipping one foot of ground. Each section is entirely independent of the other—no side motion and sections do not override each other.

Notice in picture how harrow crawls over a stump or stone just like a caterpillar; also notice how each section can be easily folded up by merely unlocking the lever. It folds so compactly in a bundle that one man can easily carry, load or handle it. Thousands in use—guaranteed to please or your money back.

HIGH WHEELED CART. The harrow cart can be purchased separately or with the harrow. Has high wheels, keeps you up out of the dust and dirt—also easier riding. Will successfully follow any harrow without a see-saw motion. Locks in place when going straight ahead—then by a touch of the foot on a lever you can easily unlock for turning around. Price of cart includes the long angle iron frames for attaching to harrow draw bar.

Shows mill attached to Ford frame.

If you don't have a Ford, you can easily pick one up for \$10 to \$15 with a pretty fair motor. We do not and cannot furnish the Ford chassis. This mill is same type as No 2C3 described on page 74. Guaranteed to satisfy you or your money back. Shipping weight 250 lbs. f. o. b. Waterloo.

NO. 2C1—Mill and attachments for Ford chassis (chassis not included) **\$24.65**

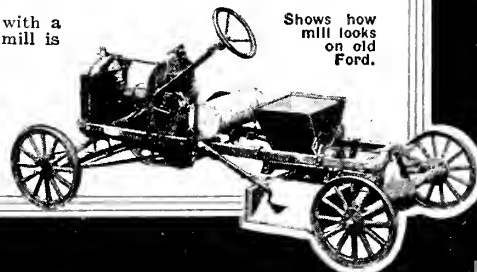

Agitator for ear corn, extra.....\$2.50

Extra burrs for same, fine or coarse, weight 9 lbs. Price per set....\$1.50

For Governor for Ford see page 79.

GIANT FEED MILL TO FIT FORDS

A practical and successful crusher and feed grinder to fit your old Ford chassis and drive from the Ford engine. We furnish at the price quoted 8-inch burr mill complete with all attachments to mount on your Ford chassis, connections for the drive shaft and give you an extra set of burrs and simple instruction sheet to show you how to attach mill to the Ford. It will grind corn on the cob as well as small grain or shelled corn. It has a capacity of 30-40 bushel per hour and is handled nicely by your old Ford engine running at a speed equivalent to 20 miles per hour on the road. This speed develops about 8 to 10 horsepower and will grind 30 to 40 bushels per hour like a top.

Shows how mill looks on old Ford.
